Interface Capability Brief

EDI 835 → OCI Object Storage · Stakeholder overview · 2026-08-13

1. Executive summary

Poll X12 835 remits from FTP, fork each ST / Transaction, map to JSON, and PUT-style-post each object to a local Object Storage mock (/n/{namespace}/b/{bucket}/o/{object}). Demo only — not Oracle IAM, not signed OCI requests.

2. Who this is for

- Sources: Trading-partner drop on FTP (sftp container, user demo / demo, dir upload) - Destinations: JSON archive (output/json/), mock bucket (output/oci-received/ + HTTP), raw EDI archive - Demo vs production: Demo only — stock HttpPostTransport against a local mock. Real OCI PutObject needs signed PUT (product gap).

- Sources: Trading-partner drop on FTP (sftp container, user demo / demo, dir upload)
- Destinations: JSON archive (output/json/), mock bucket (output/oci-received/ + HTTP), raw EDI archive
- Demo vs production: Demo only — stock HttpPostTransport against a local mock. Real OCI PutObject needs signed PUT (product gap).

3. What the interface can do

Capabilities below are drawn from the working design and, when present, the published CapabilityStatement — not from aspirational roadmap items.

- Transport: Encrypted FTP (JSCH SSH/SFTP) FTPListener
- Format: X12 835 (5010-shaped), multi-ST
- Identity: ST02 / Transaction ControlNumber
- Samples: samples/sample_multi_st_835.edi

Integration highlights

FQCN sources: csv-sftp-to-sql (FTPListener), edi-835-payment-integrity (EDI fork), edi-270-271-realtime (HttpPostTransport). Image: pilotfish-eip:23R1.

Stage	Module / mechanism	Notes
R1 Listener	FTPListener JSCH SFTP	Poll $$SFTP_POLL_DIR; post-process Delete
R1 Transport	DirectoryTransport	Stage under output/staged/
R2 Listener	DirectoryListener	Poll staged *.edi; post-process Delete
R2 Format	EDITransformationModule + XPathForkingModule //Transaction	TableData 835-W1 (5010), 5 ../
R2 Map	XSLTProcessor	Transaction XML → JSON text
R2 Archive	FileWriteProcessor	output/json/ (no XML Formatting on JSON)
R2 Transport	HttpPostTransport	Fully-qualified OGNL URL (not $$BASE/{ognl})

4. Honest boundaries (not claimed yet)

- Custom Java OciObjectStorageTransport (SDK PutObject) later?

5. What you can verify in a walkthrough

Use these as checklist items when reviewing the demo with business stakeholders. They describe outcomes, not module names.

- Exercise route “1 - SFTP Poll And Stage” from the Web UI or documented smoke path
- Exercise route “2 - Split And Put Objects” from the Web UI or documented smoke path
- Confirm outputs land in the documented folders / queues and appear in the Web UI status views

6. How it works (plain language)

7. Validation

- Checked: EDI parses; two ST → two JSON objects (PATCLAIM001, PATCLAIM002) - Not checked: SNIP, OCI HMAC, real tenancy

6. State & idempotency

- FTP post-process: Delete after pickup - Staged post-process: Delete after split - Object name includes ST control # + timestamp — resubmits create new objects

8. Dual-write / side effects

Order: archive raw → stage → fork → JSON file → HTTP POST to mock (mock also writes oci-received/).

3. Inbound contract

- Transport: Encrypted FTP (JSCH SSH/SFTP) FTPListener - Format: X12 835 (5010-shaped), multi-ST - Identity: ST02 / Transaction ControlNumber - Samples: samples/sample_multi_st_835.edi

Routes in this interface

Each route is a configured PilotFish flow. Technical wiring appears in the Route Diagrams PDF; here is the stakeholder reading.

1 - SFTP Poll And Stage: runs steps such as Poll FTP for 835, Write Staged 835.

1 - SFTP Poll And Stage: runs steps such as Poll FTP for 835, Archive Raw 835, Write Staged 835.

1 - SFTP Poll And Stage: runs steps such as Poll FTP for 835, Archive Raw 835, Write Staged 835.

2 - Split And Put Objects: runs steps such as Poll Staged 835 Files, Fork - XPath, Post JSON To Object Storage.

2 - Split And Put Objects: runs steps such as Poll Staged 835 Files, Extract ST Control Number, Fork - XPath, Post JSON To Object Storage.

2 - Split And Put Objects: runs steps such as Poll Staged 835 Files, Extract ST Control Number, Fork - XPath, Map Transaction To JSON.

2 - Split And Put Objects: runs steps such as Poll Staged 835 Files, Extract ST Control Number, Fork - XPath, Map Transaction To JSON.

2 - Split And Put Objects: runs steps such as Poll Staged 835 Files, Extract ST Control Number, Fork - XPath, Map Transaction To JSON.

1 - SFTP Poll And Stage: runs steps such as Poll FTP for 835, Archive Raw 835, Write Staged 835.

2 - Split And Put Objects: runs steps such as Poll Staged 835 Files, Extract ST Control Number, Fork - XPath, Map Transaction To JSON.

7. Security & trust posture

- X12 SNIP validation is used where configured to reject bad EDI before downstream work
- Credentials and passwords in this package are demo-only — not production secrets
- Risk noted in design: High — No productized OCI Object Storage transport — Accepted — mock + HttpPost; DESIGN names the PUT/signing gap
- Risk noted in design: High — $$ENV/{ognl} TargetURL interpolation — Fully-qualified OGNL URL string
- Risk noted in design: Med — JSCH vs modern OpenSSH — Compat sftp/sshd_config
- Risk noted in design: Med — 23R1 trial tables — TableData mount 5 ../

8. Seeing it work

- - Ports: EIP 8104, Web UI 8105, FTP 2222, mock 4599 - FTP: demo / demo, dir upload - TableData: ../../../../../EDI/TableData/x12 - Compose project: edi-835-oci-bucket
- docker compose --profile full up -d --build
- **|** Web UI **|** http://127.0.0.1:8105/ **|**
- **|** EIP **|** http://127.0.0.1:8104/eip/ **|**
- **|** Mock Object Storage **|** http://127.0.0.1:4599/health **|**
- **|** FTP **|** 127.0.0.1:2222 user demo / demo, dir upload **|**

9. Related technical documents

- DESIGN.md — working engineering specification for this interface
- README.md — how to run, ports, and smoke commands
- This Capability Brief — shareable stakeholder summary (regenerate after design changes)

This document is generated from the interface sources listed above. If design and runtime diverge, believe the smoke-tested runtime and update DESIGN.md.
