EDI 837P to QCare — Design · 2026-08-13 · what you'll hear in documents/construction-replay.mp4

What this interface does

Directory-poll X12 837P professional claims, parse with PilotFish EDI TableData (837-Q1), and map each ST to QCare's 2100-byte outpatient (OT / B837) flat-file record. Demo only — golden-path fidelity against client samples, not full WTX/ITX parity.

Who it's for

- Source: operator dropping *.txt / *.edi / *.837 into input/inbound
- Destinations: QCare text under output/qcare/; archived EDI under output/archive/; debug EDI XML under output/debug/
- Demo vs production: synthetic/client sample PHI; no SNIP gate; REPOSHDR claim numbering is a demo-stable header, not byte-identical to staged WTX
- Anyone watching the construction video or reading this transcript

Systems involved

- Source: operator dropping *.txt / *.edi / *.837 into input/inbound
- Destinations: QCare text under output/qcare/; archived EDI under output/archive/; debug EDI XML under output/debug/
- Demo vs production: synthetic/client sample PHI; no SNIP gate; REPOSHDR claim numbering is a demo-stable header, not byte-identical to staged WTX

EDI837P_QCare_Test_Plan.pdf · ready

Scenarios that prove the interface works end-to-end.

Module documentation pack (7 deep-dive PDFs) · ready

PilotFish product PDFs for the modules used in this build.

EDI837P_QCare_V2_Route_Diagrams.pdf · ready

V2 route diagrams for visual review of module topology.

construction-replay.mp4 + this transcript · generate when ready

Narrated walkthrough of building the routes, then a live Demo-tab test when inject is available.

Narration

Spoken lines from the construction video (setup, build-replay, live test, closing).

Setup

Welcome

Welcome to the PilotFish demo: EDI 837P to QCare. Directory-poll X12 837P professional claims, parse with PilotFish EDI TableData (837-Q1), and map each ST to QCare's 2100-byte outpatient (OT / B837) flat-file record. PilotFish supports the whole flow out of the box.

Pipeline overview

Before we wire anything, here's the flow end to end. Directory-poll X12 837P professional claims, parse with PilotFish EDI TableData (837-Q1), and map each ST to QCare's 2100-byte outpatient (OT / B837) flat-file record.

External systems

And here's what sits around the routes. PilotFish eiPlatform and Demo Web UI. All of those are spun up in docker images for this demo.

1 - Map 837P To QCare

First route

Directory-poll X12 837P professional claims, parse with PilotFish EDI TableData (837-Q1), and map each ST to QCare's 2100-byte outpatient (OT / B837) flat-file record. Starting with a blank canvas on the first route.

Poll EDI 837P Files

Here's a directory listener — it watches a local folder. That folder is /opt/pilotfish/input/inbound. We're only taking .edi, .txt, .837 files. It checks about every 5 seconds. After pickup we move the file aside so the folder stays clean.

Fork - XPath

This XPath fork splits the file so each transaction set becomes its own message.

Extract Claim Identity

XPath evaluation copies a few fields off the XML onto the transaction so later steps can use them.

Pretty-Print EDI XML

This processor pretty-prints the XML — line breaks and indent — so the file on disk is readable.

Debug Write EDI XML

This writes a debug copy of the XML so we can inspect what the route saw. That lands under /opt/pilotfish/output/debug.

Map EDI XML To QCare Flat File

Now for the mapping — we're using the stock XSLT processor with transform-837p-to-qcare.xslt. The stylesheet writes a 2100-character fixed-width text record.

Write QCare Record

Then we write the file out to /opt/pilotfish/output/qcare.

Closing

Demo complete

That's the demo — directory-poll X12 837P professional claims, parse with PilotFish EDI TableData (837-Q1), and map each ST to QCare's 2100-byte outpatient (OT / B837). Thanks for choosing PilotFish.
