HTTP POST To RabbitMQ · 2026-08-13 · what you'll hear in documents/construction-replay.mp4

What this interface does

Accept an HTTP POST body on a PilotFish web-service path and publish that same payload to a RabbitMQ queue.
Demo-only: no transformation, no auth, no dead-letter theater.

Who it's for

- Sources: any HTTP client (Web UI inject, curl, partner system)
- Destinations: RabbitMQ queue demo.http.ingress (AMQP publish)
- Demo vs production: Demo only (plain AMQP, demo/demo credentials, no TLS)
- Anyone watching the construction video or reading this transcript

Systems involved

- Sources: any HTTP client (Web UI inject, curl, partner system)
- Destinations: RabbitMQ queue demo.http.ingress (AMQP publish)
- Demo vs production: Demo only (plain AMQP, demo/demo credentials, no TLS)

Documents we also produce

http_post_to_rabbitmq_Capability_Brief.pdf · ready

Short overview of what the interface does — shareable without reading route XML.

http_post_to_rabbitmq_Test_Plan.pdf · ready

Scenarios that prove the interface works end-to-end.

Module documentation pack (2 deep-dive PDFs) · ready

PilotFish product PDFs for the modules used in this build.

HTTP_POST_To_RabbitMQ_V2_Route_Diagrams.pdf · ready

V2 route diagrams for visual review of module topology.

construction-replay.mp4 + this transcript · ready

Narrated walkthrough of building the routes, then a live Demo-tab test when inject is available.

Narration

Spoken lines from the construction video (setup, build-replay, live test, closing).

Setup

Welcome

Welcome to the PilotFish demo: HTTP POST To RabbitMQ. Accept an HTTP POST body on a PilotFish web-service path and publish that same payload to a RabbitMQ queue. PilotFish supports the whole flow out of the box.

Pipeline overview

Before we wire anything, here's the flow end to end. Accept an HTTP POST body on a PilotFish web-service path and publish that same payload to a RabbitMQ queue.

External systems

And here's what sits around the routes. RabbitMQ, PilotFish eiPlatform, and Demo Web UI. All of those are spun up in docker images for this demo.

1 - HTTP POST To RabbitMQ

First route

Accept an HTTP POST body on a PilotFish web-service path and publish that same payload to a RabbitMQ queue. Starting with a blank canvas on the first route.

HTTP POST Ingress

First up is an HTTP Post listener — partners POST a body to /ingress on this server, and that starts the transaction.

Publish To Queue

Then we publish that same body onto RabbitMQ queue demo.http.ingress, so downstream consumers can pick it up. The transport declares the queue if it isn't there yet.

Live test

After construction, the video switches to the Demo tab and runs a live inject when the UI supports it.

Prove it works

Routes are built. Let's switch to the Demo tab and prove it works.

Submit a sample

I'll submit this sample from the Demo tab — same as an operator would.

Waiting for the routes

Give PilotFish a moment to publish that POST onto the queue.

Queue

There it is — the same body sitting on the queue.

Submit another sample

Now a second payload from the Demo tab.

Waiting for the routes

Same path — it should show up on the queue right away.

Queue

Second payload's on the queue too.

Closing

Demo complete

That's the demo — accept an HTTP POST body on a PilotFish web-service path and publish that same payload to a RabbitMQ queue. Thanks for choosing PilotFish.
