SQL Server PilotFish XML Export — Design · 2026-08-13 · what you'll hear in documents/construction-replay.mp4

What this interface does

Poll SQL Server PilotFishDemo.dbo.Captures on a timer and write the current result set as one pretty-printed XML file. Demo-only: no business transform, no SNIP, no dual-write.

Who it's for

- Sources: SQL Server 2022 (PilotFishDemo.dbo.Captures)
- Destinations: XML file captures_export.xml on the EIP output volume
- Demo vs production: Demo only (SA login, encrypt=true;trustServerCertificate=true, overwrite the same file each poll)
- Anyone watching the construction video or reading this transcript

Systems involved

- Sources: SQL Server 2022 (PilotFishDemo.dbo.Captures)
- Destinations: XML file captures_export.xml on the EIP output volume
- Demo vs production: Demo only (SA login, encrypt=true;trustServerCertificate=true, overwrite the same file each poll)

Documents we also produce

SQL_Server_PilotFish_XML_Export_Capability_Brief.pdf · ready

Short overview of what the interface does — shareable without reading route XML.

SQL_Server_PilotFish_XML_Export_Test_Plan.pdf · ready

Scenarios that prove the interface works end-to-end.

Module documentation pack (5 deep-dive PDFs) · ready

PilotFish product PDFs for the modules used in this build.

SQL_Server_PilotFish_XML_Export_V2_Route_Diagrams.pdf · ready

V2 route diagrams for visual review of module topology.

construction-replay.mp4 + this transcript · generate when ready

Narrated walkthrough of building the routes, then a live Demo-tab test when inject is available.

Narration

Spoken lines from the construction video (setup, build-replay, live test, closing).

Setup

Welcome

Welcome to the PilotFish demo: SQL Server PilotFish XML Export. Poll SQL Server PilotFishDemo.dbo.Captures on a timer and write the current result set as one pretty-printed XML file. PilotFish supports the whole flow out of the box.

Pipeline overview

Before we wire anything, here's the flow end to end. Poll SQL Server PilotFishDemo.dbo.Captures on a timer and write the current result set as one pretty-printed XML file.

External systems

And here's what sits around the routes. SQL Server, PilotFish eiPlatform, and Demo Web UI. All of those are spun up in docker images for this demo.

1 - Export Captures to XML

First route

Poll SQL Server PilotFishDemo.dbo.Captures on a timer and write the current result set as one pretty-printed XML file. Starting with a blank canvas on the first route.

Poll Captures Table

First up is a SQL polling listener — it runs a query against PilotFishDemo over JDBC. It checks about every 15 seconds.

Conditional Router

Then a conditional router — it uses XPath to pick which path this transaction takes.

Pretty-Print XML

This processor pretty-prints the XML — line breaks and indent — so the file on disk is readable.

Write Captures XML

Then we write the file out to /opt/pilotfish/output.

Live test

After construction, the video switches to the Demo tab and runs a live inject when the UI supports it.

Prove it works

Routes are built. Let's switch to the Demo tab and prove it works.

Insert a row

I'll insert a row from the Demo tab so it shows up in Captures.

Waiting for the routes

The table updates right away. The listener keeps polling and rewriting the XML export.

SQL Captures

There's the live table, and the pretty-printed XML file from the last poll.

Closing

Demo complete

That's the demo — poll SQL Server PilotFishDemo.dbo.Captures on a timer and write the current result set as one pretty-printed XML file. Thanks for choosing PilotFish.
