EDI 834 CSV Excel Conversion — Design · 2026-08-28 · what you'll hear in documents/construction-replay.mp4

What this interface does

Enrollment teams often have CSV, tab-delimited TXT, or Excel — not X12. This demo picks up those files, maps them to HIPAA 834 enrollment XML, and writes a flat 834. The same mapping runs in reverse so an 834 becomes CSV for analytics.

Who it's for

- Sources: enrollment CSV / TXT (Excel is normalized to CSV in the Web UI on 23R1)
- Destinations: X12 834 file; reverse path writes CSV
- Demo vs production: synthetic members only. No SNIP gate, no real payer.
- Anyone watching the construction video or reading this transcript

Systems involved

- Sources: enrollment CSV / TXT (Excel is normalized to CSV in the Web UI on 23R1)
- Destinations: X12 834 file; reverse path writes CSV
- Demo vs production: synthetic members only. No SNIP gate, no real payer.

Short overview of what the interface does — shareable without reading route XML.

EDI834_CSV_Excel_Test_Plan.pdf · ready

Scenarios that prove the interface works end-to-end.

Module documentation pack (7 deep-dive PDFs) · ready

PilotFish product PDFs for the modules used in this build.

EDI834_CSV_Excel_V2_Route_Diagrams.pdf · ready

V2 route diagrams for visual review of module topology.

construction-replay.mp4 + this transcript · ready

Narrated eiConsole walkthrough of the 834 conversion, plus this transcript.

Narration

Spoken lines from the construction video.

- This is Route File Management. The working directory holds the interface packages.
- Tools has the emulator and the H2 database if you need a local file database.
- This green box is the interface package — EDI 834 CSV Excel Conversion.
- Each puzzle piece is one route. This is 1 - CSV TXT to EDI 834.
- Source System and Target System are documentation. The work is the modules in between.
- Work starts at the Listener — Poll Enrollment CSV TXT. This is a Directory Listener.
- It polls the inbound folder every 5 seconds.

- After pickup, post-process is Move into the archive folder.
- Source Transform is the CSV to XML format. That's the CSV transformer.
- Delimiter is a comma. Detect delimiter is on, so tab or pipe still works.
- Named columns: MemberId, LastName, FirstName, BirthDate, GenderCode, RelationshipCode....
- Routing decides who gets the 834 and who goes to knockout.
- The rule looks for a member id or last name.
- Target Transform is CSV XML to 834 — that's the XSLT.
- The mappings pull each field from the input onto the output.
- Transport writes the file. This one is Write EDI 834.
- Target directory is the output folder. Extension is edi.
- XML to EDI 834. table data 834-A1, 5010. star and tilde delimiters. friendly names None.
- Each puzzle piece is one route. This is 2 - EDI 834 to CSV.
- Source System and Target System are documentation. The work is the modules in between.
- Work starts at the Listener — Poll EDI 834. This is a Directory Listener.
- It polls the inbound folder every 5 seconds.
- After pickup, post-process is Move into the archive folder.
- Source Transform is the EDI 834 to XML format. That's the EDI transformer.
- Target Transform is 834 XML to CSV — that's the XSLT.
- The mappings pull each field from the input onto the output.
- Transport writes the file. This one is Write Enrollment CSV.
- Target directory is the output folder. Extension is csv.
