

# Interface Capability Brief

EDI 837 + SNIP Validation (SQL Server) Demo · Stakeholder overview · 2026-08-07

## 1. Executive summary

EDI 837 + SNIP Validation (SQL Server) Demo is a PilotFish demo interface that integrates systems using configurable listeners, processors, and transports. This brief summarizes what it can do today for stakeholders.

## 2. Who this is for

- SQL Server Edi837Demo — Claims, lines, patients, providers
- eiPlatform 23R1 — Poll → fork → EDI XML → wire 837 → SNIP 1–7
- Web UI :8095 — Inject claims, view EDI/SNIP, route viewer, PDFs

## 3. What the interface can do

*Capabilities below are drawn from the working design and, when present, the published CapabilityStatement — not from aspirational roadmap items.*

### Integration highlights

| Stage   | Module                                           | Notes                               |
|---------|--------------------------------------------------|-------------------------------------|
| R1 Poll | DatabaseSqlListener + SelectClaimsSQL.xml        | PENDING → PROCESSED                 |
| Handoff | EIPTransport                                     | Trigger Generate 837 And SNIP       |
| Fork    | Format Split Claims / XPathForkingModule         | Per-claim                           |
| Map     | XSLTProcessor<br>transform-claim-to-edi-xml.xslt | EDI XML (XCSDData/...)              |
| Emit    | EDITransformationProcessor                       | TableData 837-Q1 → output/edi/*.edi |
| SNIP    | EdiSNIPValidationProcessor Types 1–7             | output/snip/*_snip.xml              |

## 4. Honest boundaries (not claimed yet)

- Production hardening (HA, disaster recovery, full audit workflows) is outside this demo brief
- Anything not listed in §3 should be treated as future work unless confirmed in DESIGN.md

## 5. What you can verify in a walkthrough

*Use these as checklist items when reviewing the demo with business stakeholders. They describe outcomes, not module names.*

- Exercise route “1 - Poll SQL Server Claims” from the Web UI or documented smoke path
- Exercise route “2 - Generate 837 And SNIP” from the Web UI or documented smoke path
- Confirm outputs land in the documented folders / queues and appear in the Web UI status views

## 6. How it works (plain language)

### Routes in this interface

---

*Each route is a configured PilotFish flow. Technical wiring appears in the Route Diagrams PDF; here is the stakeholder reading.*

1 - Poll SQL Server Claims: runs steps such as Poll SQL Server Claims, Write Raw Claims Snapshot, Conditional Router, Hand Off Claims.

2 - Generate 837 And SNIP: runs steps such as Generate 837 And SNIP.Programmable (Trigger) Listener, Fork - XPath, Conditional Router, Read Claim Keys.

## 7. Security & trust posture

- X12 SNIP validation is used where configured to reject bad EDI before downstream work
- Risk noted in design: High — SNIP 4–7 need EDISNIP on the license — currently missing; processor fails — Keep Types 1–7 wiring; drop in licensed key + rebuild base image
- Risk noted in design: Med — Types 4–5 increase heap / first-transaction latency — Compose CATALINA\_OPTS 6GB G1
- Risk noted in design: Low — Demo Level 7 rule is illustrative (POS 99) — Documented in snip7-demo-rules.xml
- Risk noted in design: Low — Claim marked PROCESSED before SNIP completes — Same poll-before-complete pattern as sibling demos

## 8. Seeing it work

- docker compose up -d --build
- - Web UI (local): <http://localhost:8095/>
- - PilotFish EIP: <http://localhost:8093/eip/>
- docker compose logs -f pilotfish
- docker compose exec sqlserver /opt/mssql-tools18/bin/sqlcmd \
- -S localhost -U sa -P 'PilotFish\_Demo1!' -C -d Edi837Demo \
- docker compose down -v

## 9. Related technical documents

- DESIGN.md — working engineering specification for this interface
- README.md — how to run, ports, and smoke commands
- EDI837\_V2\_Route\_Diagrams.pdf — detailed PilotFish route wiring diagrams
- This Capability Brief — shareable stakeholder summary (regenerate after design changes)

*This document is generated from the interface sources listed above. If design and runtime diverge, believe the smoke-tested runtime and update DESIGN.md.*
