

Interface Capability Brief

EDI 270/271 Realtime Eligibility · Stakeholder overview · 2026-08-05

1. Executive summary

Show a true real-time eligibility integration: the clinic (or EHR) posts once, and PilotFish owns the full synchronous 270 → payer → 271 round-trip, returning clinic-ready JSON on the same HTTP request.

2. Who this is for

- Clinic Web UI — Front desk; single POST to PilotFish /eligibility/check
- PilotFish eiPlatform — Build 270, HttpPost to payer, parse 271, sync JSON reply
- Mock payer — Accepts raw X12 270; returns canned AAA or success 271

3. What the interface can do

Capabilities below are drawn from the working design and, when present, the published CapabilityStatement — not from aspirational roadmap items.

Integration highlights

Key pattern: Same as FHIR Route 0 - Keycloak JWT Auth — HttpPostTransport with PostProcessors (including SynchronousResponseProcessor) continues after the HTTP response and replies to the original sync REST listener.

4. Honest boundaries (not claimed yet)

- Same 23R1 trial table limits as orig: XML→EDI 270 may omit ST270; mock payer matches on NM1IL and does not require ST. Parse uses structural Saxon XSLT over wrapped raw 271 (not EDI→XML).
- Demo credentials / mock payer only.
- UI still builds EligibilityRequest XML for convenience; production could POST the same XML from any clinic system.

5. What you can verify in a walkthrough

Use these as checklist items when reviewing the demo with business stakeholders. They describe outcomes, not module names.

- Exercise route “1 - Realtime Eligibility Check” from the Web UI or documented smoke path
- Confirm outputs land in the documented folders / queues and appear in the Web UI status views

6. How it works (plain language)

1. Select Jane Doe / FAIL001 → Check eligibility → AAA reject theater from one round-trip. 2. Select John Smith / OK001 → Check eligibility → active coverage + EB lines. 3. Open vs Orig demo PDF to contrast UI orchestration vs PF-owned round-trip.

Routes in this interface

Each route is a configured PilotFish flow. Technical wiring appears in the Route Diagrams PDF; here is the stakeholder reading.

1 - Realtime Eligibility Check: runs steps such as Realtime Eligibility REST, Snapshot Inbound Request, Map Request To 270 EDI XML, Write 270 EDI XML.

7. Security & trust posture

-
- OAuth2 / OIDC Bearer tokens (Keycloak in this demo) protect write and export operations

8. Seeing it work

- docker compose up -d --build
- open `http://127.0.0.1:8121/`
- Sync check URL (host): `http://127.0.0.1:8120/eip/rest/eligibility/check`
- `curl -sS -X POST http://127.0.0.1:8120/eip/rest/eligibility/check \`

9. Related technical documents

- DESIGN.md — working engineering specification for this interface
- README.md — how to run, ports, and smoke commands
- EDI270_271_Realtime_V2_Route_Diagrams.pdf — detailed PilotFish route wiring diagrams
- This Capability Brief — shareable stakeholder summary (regenerate after design changes)

This document is generated from the interface sources listed above. If design and runtime diverge, believe the smoke-tested runtime and update DESIGN.md.
