

View Jet's Pizza Clone on Your Phone / iPad

Generated Jul 16, 2026 08:44 PM | Same Wi-Fi as your Mac required

OPEN THIS URL ON YOUR DEVICE

http://192.168.68.62:5173/

Steps

1. Keep your Mac awake (lid open if closing it puts the Mac to sleep).
2. Join phone/iPad to the SAME Wi-Fi as Mac (not cellular / not a guest network).
3. Open Safari or Chrome on the device.
4. Type the URL above, or scan the QR code.
5. The Jet's Pizza clone homepage should load.

Scan with Camera (iPhone/iPad) or any QR reader

What this does

The demo site runs as a local web server on your Mac. Binding it to all network interfaces (0.0.0.0) lets other devices on your LAN reach it at your Mac's Wi-Fi address (192.168.68.62) on port 5173. Nothing is published to the public internet.

If it does not load

- Restart server: `cd jets-pizza-clone && python3 -m http.server 5173 --bind 0.0.0.0`
- Confirm Mac IP still matches: `ipconfig getifaddr en0`
- Turn off VPN on phone and Mac; avoid guest Wi-Fi / AP isolation.
- If macOS Firewall prompts, allow Python incoming connections.
- IP changed? Update the URL to `http://<new-ip>:5173/`

Restart later

```
cd ".../CapturesChecking/jets-pizza-clone" && python3 -m http.server 5173 --bind 0.0.0.0
```
