ASC X12 Consolidated Guides aid in transaction implementation by combining official material into one user friendly document. Although the consolidated guides have not been explicitly mandated under HIPAA, they incorporate the individual guides that have been named into single documents. In the event that there is a conflict between the Consolidated Guides and the ASC X12 Type 3 Technical Reports or any subsequent errata, the underlying ASC X12 publications are the authoritative source.

# 1 Purpose and Business Information

## 1.1 Implementation Purpose and Scope

For the health care industry to achieve the potential administrative cost savings with Electronic Data Interchange (EDI), standards have been developed and need to be implemented consistently by all organizations. To facilitate a smooth transition into the EDI environment, uniform implementation is critical.

This is the technical report document for the ANSI ASC X12N 837 Health Care Claims (837) transaction for dental claims and/or encounters. This document provides a definitive statement of what trading partners must be able to support in this version of the 837.

This document is intended to be compliant with the data standards set out by the Health Insurance Portability and Accountability Act of 1996 (HIPAA) and its associated rules.

## 1.2 Version Information

This implementation guide is based on the October 2003 ASC X12 standards, referred to as Version 5, Release 1, Sub-release 0 (005010).

The unique Version/Release/Industry Identifier Code for transaction sets that are defined by this implementation guide is 005010**X224A3**.

The two-character Functional Identifier Code for the transaction set included in this implementation guide:

- **HC Health Care Claim (837)**

The Version/Release/Industry Identifier Code and the applicable Functional Identifier Code must be transmitted in the Functional Group Header (GS segment) that begins a functional group of these transaction sets. For more information, see the descriptions of GS01 and GS08 in Appendix C, *EDI Control Directory*.

## 1.3 Implementation Limitations

### 1.3.1 Batch and Real-time Usage

There are multiple methods available for sending and receiving business transactions electronically. Two common modes for EDI transactions are batch and real-time.

**Batch** - In a batch mode the sender does not remain connected while the receiver processes the transactions. Processing is usually completed according to a set schedule. If there is an associated business response transaction (such as a 271 Response to a 270 Request for Eligibility), the receiver creates the response transaction and stores it for future delivery. The sender of the original transmission reconnects at a later time and picks up the response transaction. This implementation guide does not set specific response time parameters for these activities.

**Real Time** - In real-time mode the sender remains connected while the receiver processes the transactions and returns a response transaction to the sender. This implementation guide does not set specific response time parameters for implementers.

This implementation guide is intended to support use in batch mode. This implementation guide is not intended to support use in real-time mode. A statement that the transaction is not intended to support a specific mode does not preclude its use in that mode between willing trading partners.

## 1.3.2 Other Usage Limitations

Receiving trading partners may have system limitations which control the size of the transmission they can receive. Some submitters may have the capability and the desire to transmit large 837 transactions with thousands of claims contained in them. The developers of this implementation guide recommend that trading partners limit the size of the transaction (ST-SE envelope) to a maximum of 5000 CLM segments. Willing trading partners can agree to higher limits. There is no recommended limit to the number of ST-SE transactions within a GS-GE or ISA-IEA.

## 1.4 Business Usage

This transaction set can be used to submit health care claim billing information, encounter information, or both, from providers of health care services to payers, either directly or via intermediary billing services and claims clearinghouses. It can also be used to transmit health care claims and billing payment information between payers with different payment responsibilities where coordination of benefits (COB) is required or between payers and regulatory agencies to monitor the rendering, billing, and/or payment of health care services within a specific health care/insurance industry segment.

For purposes of this standard, providers of health care products or services may include entities such as physicians, dentists, hospitals, pharmacies, other medical facilities or suppliers, and entities providing medical information to meet regulatory requirements. The payer is a third party entity that pays claims or administers the insurance product

or benefit or both. For example, a payer may be an insurance company, health maintenance organization (HMO), preferred provider organization (PPO), government agency (Medicare, Medicaid, TRICARE, etc.) or an entity such as a third party administrator (TPA), reprinter, or third party organization (TPO) that may be contracted by one of those groups. A regulatory agency is an entity responsible, by law or rule, for administering and monitoring a statutory benefits program or a specific segment of the health care/insurance industry.

**NOTE**

The 837 is not intended for use in exchanging referrals and certifications. Use the 278 Health Care Services Review - Request for Review and Response transaction instead.

The transaction defined by this implementation guide is intended to originate with the health care provider or the health care provider's designated agent. In some instances, a health care payer may originate an 837 to report a health care encounter to another payer or sponsoring organization. The 837 Transaction provides all necessary information to allow the destination payer to at least begin to adjudicate the claim. The 837 coordinates with a variety of other transactions including, but not limited to, the following: Health Care Information Status Notification (277), Health Care Claim Payment/Advice (835) and the Functional Acknowledgment (997). See Section 1.6 - *Transaction Acknowledgments*, and Section 1.7 - *Related Transactions*, for a summary description of these interactions.

## 1.4.1 Coordination of Benefits

A primary enhancement for this version is upgrading COB functionality to minimize manual intervention and/or the necessity for paper supporting document. Electronic COB is predicated upon using two transactions – the 837 and the 835 Health Care Claim Payment/Advice. See Section 1.4.1.1 - *Coordination of Benefits Data Models -- Detail* for details about the two models for using these transactions to achieve a totally electronic interchange of COB information. Section 3, EDI Transmission Examples for Different Business Uses, contains detailed examples of how these transactions are completed for several business situations. Section 1.4.1.3 - *Coordination of Benefits Claims from Paper or Proprietary Remittance Advices* provides guidance on creating electronic COB claims when the payer's remittance was a paper or proprietary remittance advice.

### 1.4.1.1 Coordination of Benefits Data Models -- Detail

The 837 Transaction handles two different models of benefit coordination. Both models are discussed in this section. Section 3, Examples, contains detailed examples of these

models. Each COB related data element contains notes within this implementation guide specifying when it is used. The HIPAA final rules contain additional information on COB.

### Model 1 -- Provider-to-Payer-to-Provider

**Step 1.** In model 1, the provider originates the transaction and sends the claim information to Payer A, the primary payer. See Figure 1.1 - *Provider-to-Payer-to-Provider COB Model*. The Subscriber loop (Loop ID-2000B) contains information about the person who holds the policy with Payer A. Loop ID-2320 contains information about Payer B and the subscriber who holds the policy with Payer B. In this model, the primary payer adjudicates the claim and sends an electronic remittance advice (RA) transaction (835) back to the provider. The 835 contains any claim adjustment reason codes that apply to that specific claim. The claim adjustment reason codes detail what was adjusted and why.

Figure 1.1 - Provider-to-Payer-to-Provider COB Model

**Step 2.** Upon receipt of the 835, the provider sends a second health care claim transaction (837) to Payer B, the secondary payer. The Subscriber loop (Loop ID-2000B) now contains information about the subscriber who holds the policy with Payer B. The Other Subscriber Information loop (Loop ID-2320) now contains information about the subscriber for Payer A. Any total amounts paid at the claim level go in the AMT segment in Loop ID-2320. Any claim level adjustment codes are retrieved from the 835 from Payer A and put in the CAS (Claims Adjustment) segment in Loop ID-2320. Line Level adjustment reason codes are retrieved similarly from the 835 and go in the CAS segment in the 2430 loop. Payer B adjudicates the claim and sends the provider an electronic remittance advice.

**Step 3.** If there are additional payers (not shown in Figure 1.1 - *Provider-to-Payer-to-Provider COB Model*), step 2 is repeated with the Subscriber loop (Loop ID-2000B) having information about the subscriber who holds the policy with Payer C, the tertiary payer. COB information specific to Payer A continues to be included as written in step 2 with an occurrence of Loop ID-2320 and specifying

the payer as primary. If necessary, Loop ID-2430 is included for any line level adjudications. COB information specific to Payer B is included by repeating the Loop ID-2320 again and specifying the payer as secondary. If necessary, Loop ID-2430 is included for Payer B line level adjudications.

## Model 2 -- Provider-to-Payer-to-Payer

**Step 1.** In model 2, the provider originates the transaction and sends claim information to Payer A, the primary payer. See Figure 1.2 - *Provider-to-Payer-to-Payer COB Model*. The Subscriber loop (Loop ID-2000B) contains information about the person who holds the policy with Payer A. Subscriber/payer information about secondary coverage is included in Loop ID-2320 or is on file at Payer A as a result of an eligibility file sent by Payer B. In this model, the primary payer adjudicates the claim and sends an 835 back to the provider.

Figure 1.2 - Provider-to-Payer-to-Payer COB Model

**Step 2.** Payer A reformats the 837 and sends it to the secondary payer. In reformatting the claim, Payer A takes the information about their subscriber and places it in Loop ID-2320. Payer A also takes the information about Payer B, the secondary payer/subscriber, and places it in the appropriate fields in the Subscriber Loop ID-2000B. Then Payer A sends the claim to Payer B. All COB information from Payer A is placed in the appropriate Loop ID-2320 and/or Loop ID-2430.

**Step 3.** Payer B receives the claim from Payer A and adjudicates the claim. Payer B sends an 835 to the provider. If there is a tertiary payer, Payer B performs step 2 in either Model 1 or Model 2.

### 1.4.1.1.1 Coordination of Benefits -- Claim Level

The destination payer's information is located in Loop ID-2010BB. In addition, any destination payer-specific claim information (for example, referral number) is located in the 2300 loop. All provider identifiers in the 2310 loops are specific to the destination

payer. Loop ID-2320 occurs once for each payer responsible for the claim, except for the payer receiving the 837 transaction set (destination payer). Provider identifiers in the 2330 loops are specific to the corresponding non-destination payer.

Loop ID-2320 contains the following:

- claim level adjustments
- other subscriber demographics
- various amounts
- other payer information
- assignment of benefits indicator
- patient signature indicator

Inside Loop ID-2320, Loop ID-2330 contains the information for the payer and the subscriber. As the claim moves from payer to payer, the destination payer's information in Loop ID-2000B and Loop ID-2010BB must be exchanged with the next payer's information from Loop ID-2320/2330.

#### **1.4.1.1.2 Coordination of Benefits -- Service Line Level**

Loop ID-2430 is a situational loop that can occur up to 15 times for each service line. As each payer adjudicates the service lines, occurrences may be added to this loop to explain how the payer adjudicated the service line.

Loop ID-2430 contains the following:

- ID of the payer who adjudicated the service line
- amount paid for the service line
- procedure code upon which adjudication of the service line was based. This code may be different than the submitted procedure code. (This procedure code also can be used for unbundling or bundling service lines.)
- paid units of service
- service line level adjustments
- adjudication date

To enable accurate matching of billed service lines with paid service lines, the payer must return the original billed procedure code(s) and/or modifiers in the SVC06 and SVC07 data element of the 835 if they are different from those used to pay the line. In addition, if a provider includes a line item control number at the 2400 level (REF01 = 6R), then payers are required to return this in any corresponding 835 regardless of whether bundling or unbundling has occurred.

### 1.4.1.2 Crosswalking COB Data Elements

This section provides additional guidance for automation of the COB process. The purpose of the discussion below is to clarify how multiple payer and related COB data is structured and interrelated to facilitate an automated COB process. These strategies apply to both payer and provider submitted COB claims.

For the purposes of this discussion, there are two types of payers in the 837; (1) the destination payer, the payer receiving the claim and defined in the 2010BB loop, and (2) any 'other' payers, those defined in the 2330B loop(s). The destination payer or the 'other' payers may be the primary, secondary or another position payer in terms of their sequence of paying on the claim. The payment position is not particularly important in discussing how to manage COB data elements in the 837. For this discussion, it is only important to distinguish between the destination payer and any other payer contained in the claim. In a COB situation each payer in the claim takes a turn at being the destination payer. As the destination payer changes, payer information must change position along with the payer to stay associated with that payer. The same is true of all the 'other' payers, who will each, in turn, become the destination payer as the claim is forwarded to them. It is the purpose of the example detailed below to demonstrate exactly how payer specific information stays associated with the correct payer as the destination payer rotates through the various COB payers.

#### **Business Model:**

The destination payer is defined as the payer that is described in the 2010BB loop. All of the information contained in the 2300 and 2310 loops is specific to the destination payer. Information specific to other payers is contained in the 2320, 2330, and 2430 loops. Referral, predetermination, and prior authorization numbers in the 2400 loop; and provider numbers in the 2420 loop are associated with either the destination or a non-destination payer.

#### **837 Dental Claim**

**(In this crosswalk, the Subscriber is NOT the Patient, and the Original Claim is NOT a resubmission)**

Primary Subscriber is JOHN DOE who has coverage with ABC INS; Secondary Subscriber is JANE DOE who has coverage with XYZ INS GROUP; Patient is daughter SALLY DOE.

#### **COLOR KEY**

D -- Destination Payer Loops and Data - Once the primary payer has adjudicated the claim, whoever submits the claim to the secondary payer needs to place the information specific to the secondary payer (columns 4 and 5) into the "destination payer" location (column 1) in the secondary claim.

N -- Other (non-destination) Payer Loops and Data - Once the primary payer has adjudicated the claim, whoever submits the claim to the secondary payer needs to place the information specific to the primary payer (columns 4 and 5) into the other (non-destination) payer location (column 1) in the secondary claim.

M -- Medicare COB - This information is entered by Medicare on the secondary (crossover) claim in Payer-to-Payer COB elements (column 4).

P -- Provider Submitted COB Data – This information is entered by the provider into the secondary claim elements (column 4) prior to forwarding to the next payer.

E -- Prior Payer 835 Data – This information is cross-walked from the 835 Remittance Advice (column 3) to elements in the secondary claim (column 4).

<sup>1</sup> The secondary claim information shows where the original claim information would be mapped to when creating the secondary claim. This information must be in the correct order of the implementation guide and not in the order shown above.

<sup>2</sup> The Subscriber Address in the 2010BB Loop is only used when the Patient is the Subscriber.

### <sup>3</sup> 2300REF Original Payer Claim Number

The Original Payer Claim Number is used to submit the Claim Number returned on the 835 whenever a claim is resubmitted to the same payer. When submitting a secondary claim that was resubmitted to the first payer, this number is carried in the 2330B REF. It is important to keep a Payer Original Claim Number in the loop

associated with that payer. In the example below, the number returned by the first payer is used in the destination claim loop when resubmitting to that payer. Then when the secondary claim is created, the first payer's Original Claim Number is moved down into the Loop ID-2330B REF for the first payer.

#### <sup>4</sup> 2420A-D Provider Secondary Identifiers

The G2 and LU Qualifiers and the Secondary Identifiers in these Loops are for both the Destination Payer and the Non-Destination Payer. The 2U Qualifier is specific to the Non-Destination Payer. When creating the secondary claim, the numbers are swapped as follows:

#### Example

In the following example, the first column is a claim as submitted to the primary payer. The second column is the corresponding claim with the same business data as it would

be submitted to the secondary payer. For the COB claim to the secondary payer, this example shows information related to the primary payer being placed in the other (non-destination) payer locations, and it also shows information related to the secondary payer being placed in the destination payer locations. Segments in red, italicized text are related to the secondary payer.

### 1.4.1.3 Coordination of Benefits Claims from Paper or Proprietary Remittance Advices

Claim submitters may at times need or choose to create electronic secondary/tertiary coordination of benefit (COB) claims to subsequent payers due to regulatory or business relationships when the prior payer's remittance was a paper or proprietary remittance advice. This situation may occur when the prior payer(s) is not a regular trading partner

of the claim submitter or the prior payer(s) produces electronic remittances but has not converted to the standard transaction.

Provider information systems that have the functionality to generate electronic claim transactions to health plans have the majority of the information necessary to create a COB claim. Ideally, payers have adopted usage of the standard codes sets for paper remittance advices or have provided crosswalks for their paper or non-standard electronic remittances to accommodate creation of COB claims. However, this will not always occur.

When standard codes are not available from a prior payer(s) paper/proprietary remittance advice(s), the COB claim submitter must translate the proprietary adjustment/denial edit messages to standard codes.

Generally, a subsequent COB payer(s) determines payment on a combination of “Group Code” and “Claim Adjustment Reason Code” provided in the CAS segment at either the claim or service line. The primary considerations of Group Code of subsequent COB payers are:

| <b>Description</b>     | <b>837 Standard Value</b> |
|------------------------|---------------------------|
| Patient Responsibility | PR                        |
| Contractual Obligation | CO                        |
| Payer Initiated        | PI                        |
| Other Adjustments      | OA                        |

The Claim Adjustment Reason Code is equally important in subsequent payers' determination of payment responsibility. In most instances paper or proprietary monetary adjustments may easily be cross-walked to the standard Claim Adjustment Reason Codes as follows:

| <b>Description</b>            | <b>837 Standard Value</b> |
|-------------------------------|---------------------------|
| <b>Patient Responsibility</b> |                           |
| Deductible Amount             | 1                         |
| Coinsurance Amount            | 2                         |

| Description                                                 | 837 Standard Value |
|-------------------------------------------------------------|--------------------|
| Co-payment Amount                                           | 3                  |
| Blood Deductible                                            | 66                 |
| Psychiatric Reduction                                       | 122                |
| <b>Contractual Obligations</b>                              |                    |
| Charges exceed our fee schedule or maximum allowable amount | 42                 |
| Charges exceed your contracted / legislated fee arrangement | 45                 |
| Non-covered charges                                         | 96                 |

Payment adjustments by the prior payer(s) that are not readily defined by the above cross-walk values may be reported using default Claim Adjustment Reason Code 192 (Non-standard adjustment code from paper remittance advice) or with other codes the claim submitter determines to be appropriate. Submitters must not use default code 192 when a more specific code is available.

#### 1.4.1.4 Coordination of Benefits - Service Line Procedure Code Bundling and Unbundling

This explanation of bundling and unbundling is applicable to secondary claims that must contain the results of the primary payer's processing. It is not applicable to initial claims sent to the primary payer.

Procedure code bundling or unbundling occurs when a payer's business policy requires that the services reported for payment in a claim be either combined or split apart and represented by a different group of procedure codes. Bundling occurs when two or more reported procedure codes are paid under only one procedure code. Unbundling occurs when one submitted procedure code is paid and reported back as two or more procedure codes.

See the latest version of the 835 Remittance Advice transaction implementation guide for an explanation on how bundling and unbundling are handled in that transaction.

**Bundling:**

In a COB situation, it may be necessary to show payment on bundled lines. When showing bundled service lines, the health care claim must report all of the originally submitted service lines. The first bundled procedure includes the new bundled procedure code in the SVD (Service Line Adjudication) segment (SVD03). The other procedure or procedures that are bundled into the same line are reported as originally submitted with the following:

- An SVD segment with zero payment (SVD02),
- A pointer to the new bundled procedure code (SVD06, data element 554 (Assigned Number) is the bundled service line number that refers to the LX assigned number of the service line into which this service line was bundled),
- A CAS segment with a claim adjustment reason code of 97 (payment is included in the allowance for the basic service), and
- An adjustment amount equal to the submitted charge.
- The Adjustment Group in the CAS01 will be either CO (Contractual Obligation) or PI (Payer Initiated), depending upon the provider/payer relationship.

**Bundling with COB Example**

The following example shows how to report bundled lines on a subsequent COB claim. Dr. Smith submits procedure code A and B for \$100.00 each to his PPO as primary coverage. Each procedure was performed on the same date of service. The original 837 submitted by Dr. Smith contains this information. Only segments specific to bundling are included in the example.

The health plan's adjudication system screens the submitted procedures and notes that procedure C covers the services rendered by Dr. Smith on that single date of service. The health plan's maximum allowed amount for procedure C is \$120.00. The patient's co-insurance amount for procedure C is \$20.00. The patient has not met the \$50.00 deductible. The health plan's total payment on this claim was \$50.00. The following example includes only segments specific to bundling. The key number to automate tracking of bundled lines is the service line number assigned to each service line in LX01.

### **Bundling with COB -- More Than 2 Payers Example**

Bundling with more than two payers in a COB situation where there is both bundling and line level adjustments. The COB related loops would appear as follows:

### **Claim Level 2320 and 2330 Loops**

**2320 Loop** (for payer A)

SBR\* identifies the other subscriber for payer A identified in 2330B

### **2330A Loop**

**2330A Loop**

**2330B Loop**

Repeat as necessary up to a maximum of ten times. Any one claim can carry up to a total of 11 payers (ten carried in Loop ID-2320, and one carried in Loop ID-2010BB). Once all the claim level payers have been identified, use the 2400 loop once for each original billed service line. Use 2430 loops to show line level adjustment by each payer.

etc.

**Unbundling with COB**

When unbundling, the original service line detail will be followed by one or more occurrences of the Line Adjudication Information (Loop ID-2430) loop. This loop is repeated once for each unbundled procedure code.

**Unbundling Example**

The same provider submits a claim for one service line. The billed service procedure code is A, with a submitted charge of \$200.00. The payer unbundled this into two services -- B and C -- each with an allowed amount of \$60.00. There is no deductible or co-insurance amount. Only segments specific to unbundling are included in the following example.

**LX\*1~** (Loop-2400)**1** = Service line 1**SV3\*AD:A\*200~****AD** = ADA Procedure Code qualifier**A** = Procedure code**200** = Submitted charge

### 1.4.1.5 Coordination of Benefits - Medicaid Subrogation

Federal law requires Medicaid agencies to pursue recovery of medical expenditures made on behalf of Medicaid recipients when third party liability is determined to exist. Since Medicaid recipients are required to assign any rights of third party liability to the Medicaid agency, this Implementation Guide provides the ability for willing trading partners to allow direct billing by a Medicaid agency to other health plans. These pay-to-plan claims are identified by the inclusion of Loop ID-2010AC Pay-to Plan Name Loop. Medicaid subrogation claims include the Medicaid agency's own payer claim control number in Loop ID-2300 data element CLM01 rather than the provider's patient control number. The Medicaid paid amount, indicated in Loop ID-2320 data element AMT01, represents the maximum amount of liability the Medicaid agency is requesting to recover by submitting the claim.

The Medicaid agency is identified in Loop ID-2330B (Other Payer Name). Loop ID-2320 and Loop ID-2430 include all required segments to indicate the Medicaid agency's adjudication of the original claim submitted to that agency. Receiving payers are to direct information requests about the claim to the Medicaid agency rather than to the original service provider.

At the time of publication, Medicaid subrogation is not a HIPAA mandated business usage of the ASC X12 837 Health Care Claim, but willing trading partners may use this Implementation Guide for that purpose.

## 1.4.2 Property and Casualty

To ensure timely processing, specific information needs to be included when submitting bills to Property and Casualty payers (for example, Automobile, Homeowner's, or Workers' Compensation insurers and related entities).

## 1.4.3 Data Overview

The data overview introduces the 837 transaction set structure and describes the positioning of business data within the structure. For a review of ASC X12 nomenclature, segments, data elements, hierarchical levels, and looping structure, see Appendix B, *Nomenclature*, and Appendix C, *EDI Control Directory*.

### 1.4.3.1 Loop Labeling, Sequence, and Use

The 837 transaction uses two naming conventions for loops. Loops are labeled with a descriptive name as well as with a shorthand label. Loop ID-2000A BILLING PROVIDER contains information about the billing provider, pay-to address and pay-to plan. The descriptive name -- BILLING PROVIDER -- informs the user of the overall focus of the loop. The Loop ID is a short-hand name, for example 2000A, that gives, at a glance, the position of the loop within the overall transaction. Loop ID-2010AA BILLING PROVIDER NAME, Loop ID-2010AB PAY-TO ADDRESS NAME, and Loop ID-2010AC PAY-TO PLAN NAME are subloops of Loop ID-2000A. When a loop is used more than once, a letter is appended to its numeric portion to allow the user to distinguish the various iterations of that loop when using the shorthand name of the loop. For example, loop 2000 has three possible iterations: Billing Provider Hierarchical Level (HL), Subscriber HL and Patient HL. These loops are labeled 2000A, 2000B and 2000C respectively. As the 2000 level loops define the hierarchical structure, they are required to be used in the order shown in the implementation guide.

The order of multiple subloops that do not involve hierarchical structure and that do have the same numeric position within the transaction is less important. Such subloops do

not need to be sent in the same order in which they appear in this implementation guide. For such subloops in this transaction, the numeric portion of the loop ID does not end in 00. For example, Loop ID-2010 has two possibilities within Loop ID-2000B (Loop ID-2010BA Subscriber Name and Loop ID-2010BB Payer Name). Each of these 2010 loops is at the same numeric position in the transaction. Since they do not specify an HL, it is not necessary to use them in any particular order. However, it is not acceptable to send subloop 2330 before loop 2310 because these are not equivalent subloops.

In a similar manner, if a single loop has multiple iterations (repetitions) of a particular segment, the sequence of those segments within a transaction is not important and is not required to follow the same order in which they appear in this implementation guide. For example, there are many DTP segments in the 2300 loop. It is not required that Initial Treatment Date be sent before Last Seen Date. However, it is required that the DTP segment in the 2300 loop come after the CLM segment because it is carried in a different position within the 2300 loop.

### 1.4.3.2 Data Use by Business Use

The 837 is divided into two tables. Table 1 contains transaction control information and is described in Section 1.4.3.2.1 - *Table 1 -- Transaction Control Information*. Table 2 contains the detail information for the transaction's business function and is described in Section 1.4.3.2.2 - *Table 2 -- Detail Information*.

#### 1.4.3.2.1 Table 1 -- Transaction Control Information

Table 1 is named the Header level (see Figure 1.3 - *Header Level*). Table 1 identifies the start of a transaction, the specific transaction set, the transaction's business purpose, and the submitter/receiver identification numbers.

Figure 1.3 - Header Level

| Table 1 - Header |         |                                       |       |        |
|------------------|---------|---------------------------------------|-------|--------|
| POS. #           | SEG. ID | NAME                                  | USAGE | REPEAT |
| 0050             | ST      | Transaction Set Header                | R     | 1      |
| 0100             | BHT     | Beginning of Hierarchical Transaction | R     | 1      |
| ...              |         |                                       |       |        |

##### 1.4.3.2.1.1 Transaction Set Header (ST) Segment

The Transaction Set Header (ST) segment identifies the transaction set by using 837 as the data value for the transaction set identifier code data element, ST01. The transaction set originator assigns the unique transaction set control number ST02.

Because the 837 is multi-functional, it is important for the receiver to know which business purpose is served. ST03 contains a reference to the specific implementation guide used to create this 837 transaction. This data element differentiates among the Health Care Claim: Professional (005010X222A2), the Health Care Claim: Institutional (005010X223A3), the Health Care Claim: Dental (005010X224A3), and the Health Care Service: Data Reporting (005010X225A2).

#### **1.4.3.2.1.2 Beginning of Hierarchical Transaction (BHT) Segment**

The BHT segment indicates that the transaction uses a hierarchical data structure. The data elements within the BHT are used in the following way:

- BHT01 - The Hierarchical Structure Code designates the type of business data within each hierarchical level. The 0019 value used in the claim BHT01 specifies the order of subsequent hierarchical levels to be:
  - Information source (Billing Provider)
  - Subscriber (can be the patient when the patient is the subscriber or is considered to be the subscriber)
  - Dependent (Patient, when the patient is not considered to be the subscriber)
- BHT02 - The transaction purpose code indicates “original” by using data value 00 or “reissue” by using data value 18.
- BHT03 - originator’s reference number; generated by the business application system of the entity building the original transaction.
- BHT04 - date of transaction creation; generated by the business application system of the entity building the original transaction.
- BHT05 - time of transaction creation; generated by the business application system of the entity building the original transaction.
- BHT06 - designates transaction as Subrogation, fee-for-service, or capitated services.

#### **1.4.3.2.2 Table 2 -- Detail Information**

Table 2 uses the hierarchical level structure. Each hierarchical level is comprised of a series of loops. Numbers identify the loops. The hierarchical level in Loop ID-2000 identifies the participants and the relationship to other participants. The individual or entity information is contained in Loop ID-2010.

##### **1.4.3.2.2.1 Hierarchical Level (HL) Segments**

Section B.1.1.4.3 in Appendix B contains a general description of HL structures. The following describes the HL structure within the claim transaction.

The Billing Provider or Subscriber HLs may contain multiple “child” HLs. A child HL indicates an HL that is nested within (subordinate to) the previous HL. Hierarchical levels

may also have a parent HL. A parent HL is the HL that is one level out in the nesting structure. An example follows.

|                     |                                                                                |
|---------------------|--------------------------------------------------------------------------------|
| Billing provider HL | <b>Parent HL</b> to the Subscriber HL                                          |
| Subscriber HL       | <b>Parent HL</b> to the Patient HL; <b>Child HL</b> to the Billing Provider HL |
| Patient HL          | <b>Child HL</b> to the Subscriber HL                                           |

For the Subscriber HL, the Billing Provider HL is the parent. The Patient HL is the child. The Subscriber HL is contained within the Billing Provider HL. The Patient HL is contained within the Subscriber HL.

#### 1.4.3.2.2.2 Subscriber / Patient Hierarchical Level (HL) Segments

The following information illustrates claim submissions when the patient is the subscriber and when the patient is not the subscriber.

##### **NOTE**

Specific claim detail information can be given in either the subscriber or the dependent hierarchical level. Because of this, the claim information is said to “float.” Claim information is positioned in the same hierarchical level that describes its owner-participant, either the subscriber or the patient. In other words, the claim information is placed at the subscriber hierarchical level when the patient is the subscriber or considered to be the subscriber, or it is placed at the patient/dependent hierarchical level when the patient is the dependent of the subscriber and cannot be uniquely identified on their own.

Claim submission when the **patient is the subscriber or is considered to be the subscriber:**

Billing provider (HL03=20)

Subscriber (HL03=22)

Line level information, as needed

Claim/encounter submission when the **patient is not the subscriber:**

Billing provider (HL03=20)

Subscriber (HL03=22)

Patient (HL03=23)

Claim level information

Line level information, as needed

**1.4.3.2.2.3 Hierarchical Level (HL) Structural Example**

If the billing provider is submitting claims for more than one subscriber, each of whom may or may not have dependents, the HL structure between the transaction set header and trailer (ST-SE) could look like the following:

**BILLING PROVIDER****SUBSCRIBER #1 (Patient #1)**

Claim level information

Line level information, as needed

**SUBSCRIBER #2****PATIENT #P2.1 (for example, subscriber #2 spouse)**

Claim level information

Line level information, as needed

**PATIENT #P2.2 (for example, subscriber #2 first child)**

Claim level information

Line level information, as needed

**PATIENT #P2.3 (for example, subscriber #2 second child)**

Claim level information

Line level information, as needed

**SUBSCRIBER #3 (Patient #3)**

Claim level information

Line level information, as needed

**SUBSCRIBER #4 (Patient #4)**

Claim level information

Line level information, as needed

**SUBSCRIBER #4 (repeated)****PATIENT #P4.1 (for example, #4 subscriber's first child)**

Claim level information

Line level information, as needed

Based on the previous example, the HL structure will be as follows:

**HL \*1\*\*20\*1~ (BILLING PROVIDER)**

**1** = HL sequence number

**\*\* (blank)**

= there is no parent HL (characteristic of the billing provider HL)

**20** = information source

**1** = there is at least one child HL to this HL

**HL\*2\*1\*22\*0~ (SUBSCRIBER #1)**

**2** = HL sequence number

**1** = parent HL

**22** = subscriber

**0** = no subordinate HLs to this HL (there is no child HL to this HL - claim level data follows)

**HL\*3\*1\*22\*1~ (SUBSCRIBER #2)**

**3** = HL sequence number

**1** = parent HL

**22** = subscriber

**1** = there is at least one child HL to this HL

**HL\*4\*3\*23\*0~ (PATIENT #P2.1)**

**4** = HL sequence number

**3** = parent HL

**23** = dependent

**0** = no subordinate HLs in this HL (there is no child HL to this HL - data follows)

**HL\*5\*3\*23\*0~ (PATIENT #P2.2)**

**5** = HL sequence number

**3** = parent HL

**23** = dependent

**0** = no subordinate HLs in this HL (there is no child HL to this HL - claim level data follows)

**HL\*6\*3\*23\*0~ (PATIENT #P2.3)**

**6** = HL sequence number

**3** = parent HL

**23** = dependent

**0** = no subordinate HLs in this HL (there is no child HL to this HL - claim level data follows)

**HL\*7\*1\*22\*0~ (SUBSCRIBER AND PATIENT #3)**

**7** = HL sequence number

**1** = parent HL

**22** = subscriber

**0** = no subordinate HLs in this HL (there is no child HL to this HL - claim level data follows)

**HL\*8\*1\*22\*0~ (SUBSCRIBER AND PATIENT #4)**

- 8** = HL sequence number
- 1** = parent HL
- 22** = subscriber
- 0** = no subordinate HLs

**HL\*9\*1\*22\*1~ (SUBSCRIBER #4)**

- 9** = HL sequence number
- 1** = parent HL
- 22** = subscriber
- 1** = there is at least one child HL to this HL

**HL\*10\*9\*23\*0~ (PATIENT #P4.1)**

- 10** = HL sequence number
- 9** = parent HL
- 23** = dependent
- 0** = no subordinate HLs

If another billing provider is listed in the same ST-SE functional group, it could be listed as follows: **HL\*100\*\*20\*1~**. The HL sequence number of 100 indicates that there are 99 previous HL segments and it is the billing provider level HL (HL03 = 20).

**1.4.3.2.2.4 Hierarchical Level (HL) Structural Summary**

The following information summarizes coding and structure of the HL segment:

- HL segments are numbered sequentially within a transaction (ST to SE), beginning with 1. The sequential number is found in HL01, which is the first data element in the HL segment. Sequence number must be numeric.
- The second element, HL02, indicates the sequential number of the parent hierarchical level. The billing provider/information source is the highest hierarchical level and therefore has no parent.
- The data value in data element HL03 describes the hierarchical level entity. For example, when HL03 equals 20, the hierarchical level is the billing provider; when HL03 equals 23, the hierarchical level is the dependent (patient).
- Data element HL04 indicates whether or not subordinate hierarchical levels exist. A value of "1" indicates subsequent hierarchical levels. A value of "0" indicates no subordinate hierarchical levels exist for this HL.

**1.4.3.2.2.5 Claim Structure**

After the HL structure is defined and the Subscriber and/or Patient information is listed, the specific claim information follows:

- Loop ID-2300 contains claim level information.
- Loop ID-2310 identifies various claim specific providers who may have been involved in the health care services being reported in the transaction.
- Loop ID-2320 identifies claim level adjudication information associated with non-destination, other payer information for the purpose of coordination of benefits.
- Loop ID-2330 identifies the subscriber, payer, and provider identifiers associated with the non-destination, other payer.
- Loop ID-2400 is required for all claims and identifies service line information.
- Loop ID-2410 identifies drug and biologics information.
- Loop ID-2420 identifies any service line providers who are different than claim level providers.
- Loop ID-2430 identifies any service line adjudication information from another payer.

#### **1.4.3.2.2.6 Provider Taxonomy Code Reporting**

Provider Taxonomy Codes describe provider type, classification, and area of specialization and are maintained by the National Uniform Claims Committee. For use in an 837 claim, the provider determines the code value from the code set (external Code Source 682) that most accurately describes the type and specialty classification under which the provider performed the services reported on the claim. The payer may not dictate the code value to be reported.

## **1.4.4 Balancing**

In order to ensure internal claim integrity, amounts reported in the 837 **MUST** balance at two different levels -- the claim and the service line.

### **1.4.4.1 Claim Level**

There are two different ways the claim information must balance. They are as follows.

#### **1) Claim Charge Amounts**

The total claim charge amount reported in Loop ID-2300 CLM02 must balance to the sum of all service line charge amounts reported in Loop ID-2400 SV302.

#### **2) Claim Payment Amounts**

Balancing of claim payment information is done payer by payer. For a given payer, the sum of all line level payment amounts (Loop ID-2430 SVD02) less any claim level adjustment amounts (Loop ID-2320 CAS adjustments) must balance to the claim level payment amount (Loop ID-2320 AMT02).

Expressed as a calculation for given payer: {Loop ID-2320 AMT02 payer payment} = {sum of Loop ID-2430 SVD02 payment amounts} minus {sum of Loop ID-2320 CAS adjustment amounts}.

### Line Level Payment Amounts

Line level payment information is reported in Loop ID-2430 SVD02. In order to perform the balancing function, the receiver must know which payer the line payment belongs to. This is accomplished using the identifier reported in Loop ID-2430 SVD01. This identifier must match the identifier of the corresponding payer identifier reported in Loop ID-2330B NM109.

### Adjustment Calculations

Adjustments are reported in the CAS segments of Loop ID-2320 (claim level) and Loop ID-2430 (line level). In this context, Adjustment Amounts are the sum of CAS03, CAS06, CAS09, CAS12, CAS15, and CAS18. Adjustment amounts within the CAS segment **DECREASE** the payment amount when the adjustment amount is **POSITIVE**, and **INCREASE** the payment amount when the adjustment amount is **NEGATIVE**.

### Claim Level Payment Amount

At the claim level, the payer's total claim payment is reported within the Loop ID-2320 Coordination of Benefits (COB) Payer Paid Amount AMT segment with a D qualifier in AMT01. The associated payer is defined within the Loop ID-2330B child loop.

### Example:

Claim Charge - 100.00  
Claim Payment - 80.00  
Claim Adjustment - 5.00

Line 1 Charge - 80.00  
Line 1 Payment - 70.00  
Line 1 Adjustment - 10.00

Line 2 Charge - 20.00  
Line 2 Payment - 15.00  
Line 2 Adjustment - 5.00

Claim Payment = (Line 1 Payment + Line 2 Payment) – Claim Adjustment

80.00 = (70.00 + 15.00) - 5.00

### 1.4.4.2 Service Line

Line Adjudication Information (Loop ID-2430) is reported when the payer identified in Loop ID-2330B has adjudicated the claim and service line payments and/or adjustments have been applied.

Line level balancing occurs independently for each individual Line Adjudication Information loop. In order to balance, the sum of the line level adjustment amounts and line level payments in each Line Adjudication Information loop must balance to the provider's charge for that line (Loop ID-2400 SV302). The Line Adjudication Information loop can repeat up to 25 times for each line item.

The calculation for each 2430 loop is as follows: {sum of Loop ID-2430 CAS Service Line Adjustments} plus {Loop ID-2430 SVD02 Service Line Paid Amount} = {Loop ID-2400 SV302 Line Item Charge Amount}

**Example:**

Line 1 Charge - 80.00

Line 1 Payment - 70.00

Line 1 Adjustment - 10.00

Line 2 Charge - 20.00

Line 2 Payment - 15.00

Line 2 Adjustment - 5.00

(Line 1 Adjustments) + (Line 1 Payment) = Line Item 1 Charge

10.00 + 70.00 = 80.00

(Line 2 Adjustments) + (Line 2 Payment) = Line Item 2 Charge

5.00 + 15.00 = 20.00

### 1.4.5 Allowed/Approved Amount Calculation

During the development cycle of this version, one of the guiding principles was to remove all amount fields that can be calculated with other information already present in the claim. This resulted in the elimination of several AMT segments. Included in these, are the Approved and Allowed Amount segments. The workgroup has found these amounts vary in definition depending upon perspective. Although rare, there are times the provider's determination of what the allowed amount is different from the payers. This occurs for many various reasons. However, there has never been a way to recognize when these differences occur. As a result, the authors offer the following guidance as to how these amounts are calculated.

The Allowed amount as determined by the payer is calculated using the prior payer's payment information coupled with adjustment information in the CAS segments. The prior payer payment + the sum total of all patient responsible adjustment amounts = the Allowed amount. The Patient Responsible adjustments are identified by use of the Category Code PR in CAS01.

The Allowed amount as determined by the provider is calculated using the prior payer's payment information coupled with the Remaining Patient Liability AMT segments. The prior payer payment + the Remaining Patient Liability AMT amount = the Allowed amount.

## 1.5 Business Terminology

This section defines terms used in this implementation guide that are not included in the Data Dictionary Appendix. See the Data Dictionary Appendix for additional terms and definitions.

### **Bundling**

Bundling occurs when a provider submits two or more reported procedure codes and the payer believes that the actual services performed and reported must be paid under only one (possibly different) procedure code.

### **Claim**

For the purposes of this implementation guide, claim is intended to be an all inclusive term to represent both reimbursable claims and encounter reporting.

### **Dependent**

In the hierarchical loop coding, the dependent code 23 indicates the use of the Patient Hierarchical loop (Loop ID-2000C).

### **Destination Payer**

The destination payer is the payer who is specified in the Subscriber/Payer loop (Loop ID-2010BB).

### **Encounter**

Non-reimbursable claim for which the health care encounter information is gathered for reporting. Also thought of as the reporting of a face-to-face encounter between a patient and a provider for which no reimbursement will be made. Often seen in pre-paid capitated financial arrangements in which the provider of services is paid in advance for the patient's health care needs. In some areas called a capitated or zero pay claim.

### **Inpatient**

The determination of what constitutes an Inpatient Claim is defined by the National Uniform Billing Committee code set and documentation. See Section 1.12.6 - *Inpatient and Outpatient Designation* for more information about Inpatient and Outpatient designation.

### **Outpatient**

The determination of what constitutes an Outpatient Claim is defined by the National Uniform Billing Committee code set and documentation. See Section 1.12.6 - *Inpatient and Outpatient Designation* for more information about Inpatient and Outpatient designation.

### **Pay-To Plan Claims**

Pay-to plan claims are payment requests billed by one health plan directly to other health plans. These claims were originally submitted to and paid by the first health plan. An example of a pay-to plan claim is a payment request from a Medicaid agency direct to another health plan that may have liability for the member and services on the claim originally paid by the Medicaid agency.

### **Patient**

The term patient is used in this implementation guide when the Patient loop (Loop ID-2000C) is used. In Loop ID-2000C, the patient is not the same person as the subscriber, and the patient is a person (for example, spouse, children, others) who is covered by the subscriber's insurance plan and does not have a unique member identification number. The person receiving services (in clinical terms, the patient) can be the same person as the subscriber. In that case, all information about that person is carried in the Subscriber loop (Loop ID-2000B).

See Section 1.4.3.2.2.2 - *Subscriber / Patient Hierarchical Level (HL) Segments*, and the notes for the SBR and PAT segments for further details. Every effort has been made to ensure that the meaning of the word patient is clear in its specific context.

### **Provider**

A provider is either a person or organizational entity who has either provided or participated in some aspect of the service(s) described in the transaction. Specific types of providers are identified in this implementation guide (for example billing provider, referring provider). Beginning with the 5010 version, the Billing Provider must be a health care or atypical provider (as described in Section 1.10.1 - *Providers who are Not Eligible for Enumeration*).

**Secondary Payer**

The term secondary payer indicates any payer who is not the primary payer. The secondary payer may be the secondary, tertiary, or even quaternary payer.

**Subscriber**

The subscriber is the person whose name is listed in the health insurance policy, or who has a unique member identification number. Other synonymous terms include member and/or insured. In some cases the subscriber is the person receiving services. See the definition of patient, and see Section 1.4.3.2.2.2 - *Subscriber / Patient Hierarchical Level (HL) Segments*, and the notes for the SBR and PAT segments for further details.

**Transmission Intermediary**

A transmission intermediary is any entity that handles the transaction between the provider (originator of the claim transmission) and the destination payer. The term intermediary is not used to convey a specific Medicare contractor type.

**Unbundling**

Unbundling occurs when a provider is billing multiple procedure codes for a group of procedures that are covered by a single comprehensive code. In other words, the provider submits one reported procedure code and the payer believes that the actual services performed and reported must be paid under two or more separate (possibly different) procedure codes. Unbundling also occurs when the units of service reported on one service line are broken out to two or more service lines for different reimbursement rates.

## 1.6 Transaction Acknowledgments

There are several acknowledgment implementation transactions available for use. The IG developers have noted acknowledgment requirements in this section. Other recommendations of acknowledgment transactions may be used at the discretion of the trading partners. A statement that the acknowledgment is not required does not preclude its use between willing trading partners.

### 1.6.1 997 Functional Acknowledgment

The 997 informs the submitter that the functional group arrived at the destination. It may include information about the syntactical quality of the functional group.

The Functional Acknowledgment (997) transaction is not required as a response to receipt of a batch transaction compliant with this implementation guide.

The Functional Acknowledgment (997) transaction is not required as a response to receipt of a real-time transaction compliant with this implementation guide.

A 997 Implementation Guide is being developed for use by the insurance industry and is expected to be available for use with this version of this Implementation Guide.

## **1.6.2 999 Implementation Acknowledgment**

The 999 informs the submitter that the functional group arrived at the destination. It may include information about the syntactical quality of the functional group and the implementation guide compliance.

The Implementation Acknowledgment (999) transaction is not required as a response to receipt of a batch transaction compliant with this implementation guide.

The Implementation Acknowledgment (999) transaction is not required as a response to receipt of a real-time transaction compliant with this implementation guide.

A 999 Implementation Guide is being developed for use by the insurance industry and is expected to be available for use with this version of this Implementation Guide.

## **1.6.3 824 Application Advice**

The 824 informs the submitter of the results of the receiving application system's data content edits of transaction sets.

The Application Advice (824) transaction is not required as a response to receipt of a batch transaction compliant with this implementation guide.

The Application Advice (824) transaction is not required as a response to receipt of a real-time transaction compliant with this implementation guide.

An 824 Implementation Guide is being developed for use by the insurance industry and is expected to be available for use with this version of this Implementation Guide.

## **1.6.4 277 Health Care Claim Acknowledgment**

The 277 provides an application level acknowledgment of electronic claims. It may include information about the business validity and acceptability of the claims.

The Health Care Claim Acknowledgment (277) transaction is not required as a response to receipt of a batch transaction compliant with this implementation guide.

The Health Care Claim Acknowledgment (277) transaction is not required as a response to receipt of a real-time transaction compliant with this implementation guide.

## 1.7 Related Transactions

There are one or more transactions related to the transactions described in this implementation guide.

### 1.7.1 Health Care Claim Payment/Advice (835)

Information in the Health Care Claim Payment/Advice (835) transaction is generated by the payer's adjudication system. However, in a coordination of benefits (COB) situation where the provider is sending an 837 to a secondary payer, information from the 835 may be included in the secondary 837. As shown in Section 1.4.1.2 - *Crosswalking COB Data Elements*, data from specific segments/elements in the 835 are crosswalked directly into the subsequent 837.

## 1.8 Trading Partner Agreements

Trading partner agreements are used to establish and document the relationship between trading partners. A trading partner agreement must not override the specifications in this implementation guide if a transmission is reported in GS08 to be a product of this implementation guide.

## 1.9 HIPAA Role in Implementation Guides

Administrative Simplification provisions of the Health Insurance Portability and Accountability Act of 1996 (PL 104-191 - known as HIPAA) direct the Secretary of Health and Human Services to adopt standards for transactions to enable health information to be exchanged electronically and to adopt specifications for implementing each standard.

This implementation guide has been developed for use as an insurance industry implementation guide. At the time of publication it has not been adopted as a HIPAA standard. Should the Secretary adopt this implementation guide as a standard, the Secretary will establish compliance dates for its use by HIPAA covered entities.

## 1.10 National Provider Identifier Usage within the HIPAA 837 Transaction

Implementation and use of the National Provider Identifier (NPI) has a direct impact on the generation of 837 transaction sets. Previous versions contained placeholder codes and elements in anticipation of the official Rule. With publication of the final rule and industry input on implementation direction, the authors have identified the following areas for clarification and direction for use within the implementation guide.

- Providers who are not eligible for enumeration
- Implementation migration strategy
- Organization health care provider subpart representation
- Subparts and the billing provider

### 1.10.1 Providers who are Not Eligible for Enumeration

Atypical providers are service providers that do not meet the definition of health care provider. Examples include taxi drivers, carpenters, personal care providers, etc. Although, they are not eligible to receive an NPI, these providers perform services that are reimbursed by some health plans. As a result, this implementation guide has been enhanced to accommodate both the NPI (to identify health care providers) and proprietary identifiers (to identify atypical/non-health care providers).

### 1.10.2 Implementation Migration Strategy

The ANSI ASC X12N Health Care Claims workgroup (TG2WG2) anticipates that during the transition period (i.e., the period from May 23, 2005 until the NPI compliance dates), the need to use both the NPI and proprietary identifiers to identify health care providers in the same standard claims transaction will be necessary. The implementation guides for the 837 transaction set have been modified to meet this need.

### 1.10.3 Organization Health Care Provider Subpart Representation

Historically, there has been no standard representation of organization health care providers. How the health care provider entity has been identified has varied by trading partner. The NPI subpart concept provides an organization health care provider the ability to represent itself in a manner consistent to all trading partners. In the health care

claim, there are three possible locations for organization health care provider entities to be reported. They are Billing Provider, Rendering Provider, and Service Location.

**Billing Provider.** In many instances the Billing Provider is an organization; therefore, the Billing Provider NPI reported would belong to an organization health care provider. The Billing Provider may be an individual only when the services were performed by, and will be paid to, an independent, non-incorporated individual. When an organization health care provider has determined that it has subparts requiring enumeration, that organization health care provider will report the NPI of the subpart as the Billing Provider. The subpart reported as the Billing Provider MUST always represent the most detailed level of enumeration as determined by the organization health care provider and MUST be the same identifier sent to any trading partner.

**NOTE**

In published versions prior to 5010, the Billing Provider may have been a variety of entities, including billing services and healthcare clearinghouses. Beginning with version 5010, the Billing Provider must be a health care or atypical service provider (as described in the section entitled Providers who are Not Eligible for Enumeration).

**Rendering Provider or Service Location.** An organization health care provider's NPI used to identify the Rendering Provider or the Service Location must be external to the entity identified as the Billing Provider (for example; reference lab). It is not permissible to report an organization health care provider's NPI as the Rendering Provider or the Service Location if the Rendering Provider or Service Location is a subpart of the Billing Provider.

## 1.10.4 Subparts and the 2010 AA - Billing Provider Name Loop

Beginning on the NPI compliance date(s): When the Billing Provider is an organization health care provider, the NPI of the organization health care provider or its subpart is reported in NM109. When an organization health care provider has determined a need to enumerate subparts, it is required that a subpart's NPI be reported as the Billing Provider. The subpart reported as the Billing Provider MUST always represent the most detailed level of enumeration and MUST be the same identifier sent to any trading partner. For additional explanation, see Section 1.10.3 - Organization Health Care Provider Subpart Representation.

The Billing Provider may be an individual only when the health care provider performing services is an independent, unincorporated entity. In these cases, the Billing Provider

is the individual whose Tax Identification Number (TIN) is used for IRS Form 1099 purposes. That individual's NPI is reported in NM109, and the individual's TIN must be reported in the REF segment of Loop ID-2010AA. The individual's NPI must be reported when the individual provider is eligible for an NPI.

Prior to the NPI compliance date, proprietary identifiers necessary for the receiver to identify the Billing Provider entity are to be reported in the REF segment of Loop ID-2010BB Payer Name. The TIN of the Billing Provider, used for IRS Form 1099 purposes, must be reported in the REF segment of Loop ID-2010AA Billing Provider.

When the Billing Provider is an atypical provider, the Billing Provider should be the legal entity. However, willing trading partners may agree upon varying definitions. Proprietary or legacy identifiers necessary for the trading partner to identify the entity are to be reported in the REF segment of Loop ID-2010BB Payer Name. The TIN, used for IRS Form 1099 purposes, must be reported in the REF segment of Loop ID-2010AA Billing Provider.

## **1.11 Coding of Drugs in the 837 Claim**

The Dental claim does not support coding of drug claims. If it is necessary to code drug claims use the Professional or Institutional claim, as appropriate.

## **1.12 Additional Instructions and Considerations**

### **1.12.1 Individuals with one Legal Name**

In those situations where an individual has only one legal name, report that name in the last name data element of the NM1 segment, specifically the NM103. The first and middle name data elements for that NM1 segment are then not used. This guideline is true for all loops containing an NM1 segment that may identify an individual.

### **1.12.2 Rejecting Claims Based on the Inclusion of Situational Data**

This implementation guide contains a number of Situational Rules which state the element or segment is required when a payer's adjudication is known to be impacted by that information. These rules must not be construed as allowing the current payer to reject

a claim or transaction if the information is submitted but not used by that payer. The condition in these situational rules is based on a known impact to any potential payer's adjudication.

The purpose is to enable proper adjudication for any potential downstream payers as well as allow affected providers to collect and report information consistently for all trading partners when desired. As a result, the submitter is not restricted from sending the information to other payers in addition to the specific payer that has a known adjudication impact.

### 1.12.3 Multiple REF Segments with the same Qualifier

A repeat of a REF segment within the same loop is not allowed when the qualifier in the REF01 data element is the same. However, there is one important exception to this rule. Within the 837, there are data elements reported in Loop ID-2400 and the various 2420 loops which are payer specific (for example: Referral Number, Prior Authorization Number, Provider Identifiers...). When these pieces of information are reported, the composite data element in REF04 is used to identify the associated payer. In all cases, the reported data belongs to the destination payer when REF04 is not used. When REF04 is used, the value reported in the first component (REF04-1) equals 2U. This qualifier indicates the value reported in the following component (REF04-2) is a payer identifier. This payer identifier "links" to one of the payer identifiers found in Loop ID-2330B NM109.

### 1.12.4 Provider Tax IDs

For purposes of this implementation, the Billing Provider is the provider or provider organization to which payment is intended to be made. This payment is included in the provider's 1099 reporting. The Employer Identification Number (EIN) or Social Security Number (SSN) for the billing provider is only reported in the Billing Provider Tax Identification REF segment in Loop ID-2010AA Billing Provider. The EIN and SSN qualifiers are not valid in any provider REF segments other than the 2010AA Billing Provider loop. Other reference qualifiers must be used in the REF segments in those loops to provide identifying information, such as "G2" for Provider's Commercial Number.

### 1.12.5 Claim and Line Redundant Information

This implementation guide supports the reporting of some information at the claim and the service levels to enable the reporting of individual line specific information. The line level usage notes for these pieces of information state "Required when different than that reported at the claim level. If not required by this implementation guide, do not send." This wording results in the potential for misinterpretation resulting in unintended rigidity.

These usage notes, as written with the “do not send” statement, should be applied as establishing the conditions when a submitter must send, and when a submitter is not required to send, the line level information. This “do not send” statement does not establish situations where a receiver is allowed, or is required, to reject a claim. That would be placing an unnecessary burden on the sender. The appropriate action by a receiver is to “ignore, but don’t reject” this redundant claim/line information. If redundant data segments or elements are reported but are not necessary for the receiver within their application, the receiver ignores the information that is not needed. The presence of the unneeded information must not cause the transaction to be rejected.

These usage notes do not permit a receiver to request or require the redundant line level data. Sending the redundant data is strictly at the submitter’s discretion.

An example of this would be Rendering Provider information that is supported in the 2310 and 2420 loops of the Institutional, Professional, and Dental implementation guides. The same Rendering Provider information might be reported at both the claim and line levels. This situation would not alter the payment of that claim nor complicate the adjudication algorithms. Consequently, rejecting any claims because of the presence of this redundant data would unnecessarily burden the provider community and further complicate the claim process.

Other examples exist in the claim implementation guides where the business cases open up the possibility for redundant data to be reported. For all such situations, the principle is to “ignore, but don’t reject”.

## **1.12.6 Inpatient and Outpatient Designation**

The determination of what constitutes an Inpatient or Outpatient claim is defined in the external code set developed by the National Uniform Billing Committee in its Data Specifications Manual (UB Manual) beginning with UB-04. General guidelines are contained in the Type of Bill section of the UB Manual. Inpatient and Outpatient claims are distinguished by Type of Bill and other factors. Certain bill types are designated for inpatient use while others are designated for outpatient reporting. Exceptions to the general rules are documented with reference to the specific data elements affected.

## **1.12.7 Trading Partner Acknowledgments**

The authors of this implementation guide strongly encourage submitters of this transaction to expect and require standard electronic acknowledgments from receivers. The authors encourage receivers to expect and require submitters to have an operational capability to accept and take action on standard electronic acknowledgments.

## 2 Transaction Set

### NOTE

See Appendix B, Nomenclature, to review the transaction set structure, including descriptions of segments, data elements, levels, and loops.

### 2.1 Presentation Examples

The ASC X12 standards are generic. For example, multiple trading communities use the same PER segment to specify administrative communication contacts. Each community decides which elements to use and which code values in those elements are applicable.

This implementation guide uses a format that depicts both the generalized standard and the insurance industry-specific implementation. In this implementation guide, **IMPLEMENTATION** specifies the requirements for this implementation. **X12 STANDARD** is included as a reference only.

The transaction set presentation is comprised of two main sections with subsections within the main sections:

#### 2.3 Transaction Set Listing

There are two sub-sections under this general title. The first sub-section concerns this implementation of a generic X12 transaction set. The second sub-section concerns the generic X12 standard itself.

##### IMPLEMENTATION

This section lists the levels, loops, and segments contained in this implementation. It also serves as an index to the segment detail.

##### STANDARD

This section is included as a reference.

#### 2.4 Segment Detail

There are three sub-sections under this general title. This section repeats once for each segment used in this implementation providing segment specific detail and X12 standard detail.

##### SEGMENT DETAIL

This section is included as a reference.

##### DIAGRAM

This section is included as a reference. It provides a pictorial view of the standard and shows which elements are used in this implementation.

##### ELEMENT DETAIL

This section specifies the implementation details of each data element.

These illustrations (Figures 2.1 through 2.5) are examples and are not extracted from the Section 2 detail in this implementation guide. Annotated illustrations, presented below in the same order they appear in this implementation guide, describe the format of the transaction set that follows.

## 2.2 Implementation Usage

### 2.2.1 Industry Usage

Industry Usage describes when loops, segments, and elements are to be sent when complying with this implementation guide. The three choices for Usage are required, not used, and situational. To avoid confusion, these are named differently than the X12 standard Condition Designators (mandatory, optional, and relational).

**Required** This loop/segment/element must always be sent.

Required segments in Situational loops only occur when the loop is used.

Required elements in Situational segments only occur when the segment is used.

Required component elements in Situational composite elements only occur when the composite element is used.

**Not Used** This element must never be sent.

**Situational** Use of this loop/segment/element varies, depending on data content and business context as described in the defining rule. The defining rule is documented in a Situational Rule attached to the item.

There are two forms of Situational Rules.

The first form is “Required when <explicit condition statement>. If not required by this implementation guide, may be provided at the sender’s discretion, but cannot be required by the receiver.” The data qualified by such a situational rule cannot be required or requested by the receiver, transmission of this data is solely at the sender’s discretion.

The alternative form is “Required when <explicit condition statement>. If not required by this implementation guide, do not send.” The data qualified by such a situational rule cannot be sent except as described in the explicit condition statement.

**2.2.1.1****Transaction Compliance Related to Industry Usage**

A transmitted transaction complies with an implementation guide when it satisfies the requirements as defined within the implementation guide. The presence or absence of an item (loop, segment, or element) complies with the industry usage specified by this implementation guide according to the following table.

| Industry Usage                                                                                                                                                                                | Business Condition is | Item is  | Transaction Complies with Implementation Guide? |

This table specifies how an entity is to evaluate a transmitted transaction for compliance with industry usage. It is not intended to require or imply that the receiver must reject non-compliant transactions. The receiver will handle non-compliant transactions based on its business process and any applicable regulations.

**2.2.2****Loops**

Loop requirements depend on the context or location of the loop within the transaction. See Appendix B for more information on loops.

- A nested loop can be used only when the associated higher level loop is used.
- The usage of a loop is the same as the usage of its beginning segment.
  - If a loop's beginning segment is Required, the loop is Required and must occur at least once unless it is nested in a loop that is not being used.
  - If a loop's beginning segment is Situational, the loop is Situational.
- Subsequent segments within a loop can be sent only when the beginning segment is used.
- Required segments in Situational loops occur only when the loop is used.

### **2.3.1 Implementation**

This section lists the levels, loops, and segments contained in this implementation. It also serves as an index to the segment detail. Refer to section 2.1 Presentation Examples for detailed information on the components of the Implementation section.

**Table 2 - Patient Detail**

For purposes of this documentation, the claim detail information is presented only in the dependent level. Specific claim detail information can be given in either the subscriber or the dependent hierarchical level. Because of this the claim information is said to “float.” Claim information is positioned in the same hierarchical level that describes its owner-participant, either the subscriber or the dependent. In other words, the claim information, loop 2300, is placed following loop 2010BB in the subscriber hierarchical level when the patient is the subscriber, or it is placed at the patient/dependent hierarchical level when the patient is the dependent of the subscriber as shown here. When the patient is the subscriber, loops 2000C and 2010CA are not sent. See 1.4.3.2.2.1, HL Segment, for details.

## 2.3.2 X12 Standard

This section is included as a reference. The implementation guide reference clarifies actual usage. Refer to section 2.1 Presentation Examples for detailed information on the components of the X12 Standard section.

## STANDARD

# 837 Health Care Claim

Functional Group ID: **HC**

This X12 Transaction Set contains the format and establishes the data contents of the Health Care Claim Transaction Set (837) for use within the context of an Electronic Data Interchange (EDI) environment. This transaction set can be used to submit health care claim billing information, encounter information, or both, from providers of health care services to payers, either directly or via intermediary billers and claims clearinghouses. It can also be used to transmit health care claims and billing payment information between payers with different payment responsibilities where coordination of benefits is required or between payers and regulatory agencies to monitor the rendering, billing, and/or payment of health care services within a specific health care/insurance industry segment.

For purposes of this standard, providers of health care products or services may include entities such as physicians, hospitals and other medical facilities or suppliers, dentists, and pharmacies, and entities providing medical information to meet regulatory requirements. The payer refers to a third party entity that pays claims or administers the insurance product or benefit or both. For example, a payer may be an insurance company, health maintenance organization (HMO), preferred provider organization (PPO), government agency (Medicare, Medicaid, Civilian Health and Medical Program of the Uniformed Services (CHAMPUS), etc.) or an entity such as a third party administrator (TPA) or third party organization (TPO) that may be contracted by one of those groups. A regulatory agency is an entity responsible, by law or rule, for administering and monitoring a statutory benefits program or a specific health care/insurance industry segment.

**NOTES:**

- 1/0200** Loop 1000 contains submitter and receiver information. If any intermediary receivers change or add data in any way, then they add an occurrence to the loop as a form of identification. The added loop occurrence must be the last occurrence of the loop.
- 2/0150** Loop 2010 contains information about entities that apply to all claims in loop 2300. For example, these entities may include billing provider, pay-to provider, insurer, primary administrator, contract holder, or claimant.
- 2/1950** The CR1 through CR5 and CRC certification segments appear on both the claim level and the service line level because certifications can be submitted for all services on a claim or for individual services. Certification information at the claim level applies to all service lines of the claim, unless overridden by certification information at the service line level.
- 2/2500** Loop 2310 contains information about the rendering, referring, or attending provider.
- 2/2900** Loop 2320 contains insurance information about: paying and other Insurance Carriers for that Subscriber, Subscriber of the Other Insurance Carriers, School or Employer Information for that Subscriber.
- 2/3250** Segments NM1-N4 contain name and address information of the insurance carriers referenced in loop 2320.
- 2/3650** Loop 2400 contains Service Line information.
- 2/4250** The CR1 through CR5 and CRC certification segments appear on both the claim level and the service line level because certifications can be submitted for all services on a claim or for individual services. Certification information at the claim level applies to all service lines of the claim, unless overridden by certification information at the service line level.
- 2/4930** Loop 2410 contains compound drug components, quantities and prices.
- 2/5000** Loop 2420 contains information about the rendering, referring, or attending provider on a service line level. These segments override the information in the claim - level segments if the entity identifier codes in each NM1 segment are the same.
- 2/5400** SVD01 identifies the payer which adjudicated the corresponding service line and must match DE 67 in the NM109 position 325 for the payer.
- 2/5510** Loop 2440 provides certificate of medical necessity information for the procedure identified in SV101 in position 2/3700.
- 2/5520** FRM segment provides question numbers and responses for the questions on the medical necessity information form identified in LQ position 551.

| <b>SEMANTIC:</b> The implementation convention reference (ST03) is used by the translation routines of the interchange partners to select the appropriate implementation convention to match the transaction set definition. When used, this implementation convention reference takes precedence over the implementation reference specified in the GS08. |           |              |                                                                                                                                                                                      |                   |

**RP**

**Reporting**

Use RP when the entire ST-SE envelope contains only capitated encounters.

Use RP when the transaction is being sent to an entity (usually not a payer or a normal provider payer transmission intermediary) for purposes other than adjudication of a claim. Such an entity could be a state health data agency which is using the 837 for health data reporting purposes.

## SEGMENT DETAIL

## NM1 - SUBMITTER NAME

**X12 Segment Name:** Individual or Organizational Name**X12 Purpose:** To supply the full name of an individual or organizational entity**X12 Set Notes:** 1. Loop 1000 contains submitter and receiver information. If any intermediary receivers change or add data in any way, then they add an occurrence to the loop as a form of identification. The added loop occurrence must be the last occurrence of the loop.

**X12 Syntax:** 1. **P0809**  
If either NM108 or NM109 is present, then the other is required.

2. **C1110**  
If NM111 is present, then NM110 is required.

3. **C1203**  
If NM112 is present, then NM103 is required.

**Loop:** 1000A — SUBMITTER NAME **Loop Repeat:** 1**Segment Repeat:** 1**Usage:** REQUIRED**TR3 Notes:** 1. The submitter is the entity responsible for the creation and formatting of this transaction.**TR3 Example:** NM1\*41\*2\*ABC SUBMITTER\*\*\*\*\*46\*999999999~

SEGMENT DETAIL

## PER - SUBMITTER EDI CONTACT INFORMATION

**X12 Segment Name:** Administrative Communications Contact

**X12 Purpose:** To identify a person or office to whom administrative communications should be directed

- X12 Syntax:**
1. **P0304**  
If either PER03 or PER04 is present, then the other is required.
  2. **P0506**  
If either PER05 or PER06 is present, then the other is required.
  3. **P0708**  
If either PER07 or PER08 is present, then the other is required.

**Loop:** 1000A — SUBMITTER NAME

**Segment Repeat:** 2

**Usage:** REQUIRED

**TR3 Notes:**

1. When the communication number represents a telephone number in the United States and other countries using the North American Dialing Plan (for voice, data, fax, etc.), the communication number must always include the area code and phone number using the format AAABBBCCCC where AAA is the area code, BBB is the telephone number prefix, and CCCC is the telephone number. Therefore, the following telephone number (555) 555-1234 would be represented as 5555551234. Do not submit long distance access numbers, such as “1”, in the telephone number. Telephone extensions, when applicable, must be submitted in the next element immediately following the telephone number. When submitting telephone extensions, only submit the numeric extension. Do not include data that indicates an extension, such as “ext” or “x-”.

2. The contact information in this segment identifies the person in the submitter organization who deals with data transmission issues. If data transmission problems arise, this is the person to contact in the submitter organization.

3. There are 2 repetitions of the PER segment to allow for six possible combinations of communication numbers including extensions.

**TR3 Example:** PER\*IC\*JOHN SMITH\*TE\*5555551234\*EX\*123~

## SEGMENT DETAIL

## NM1 - RECEIVER NAME

**X12 Segment Name:** Individual or Organizational Name**X12 Purpose:** To supply the full name of an individual or organizational entity**X12 Set Notes:** 1. Loop 1000 contains submitter and receiver information. If any intermediary receivers change or add data in any way, then they add an occurrence to the loop as a form of identification. The added loop occurrence must be the last occurrence of the loop.**X12 Syntax:** 1. **P0809**  
If either NM108 or NM109 is present, then the other is required.  
2. **C1110**  
If NM111 is present, then NM110 is required.  
3. **C1203**  
If NM112 is present, then NM103 is required.**Loop:** 1000B — RECEIVER NAME **Loop Repeat:** 1**Segment Repeat:** 1**Usage:** REQUIRED**TR3 Example:** NM1\*40\*2\*XYZ RECEIVER\*\*\*\*\*46\*111222333~

## SEGMENT DETAIL

## HL - BILLING PROVIDER HIERARCHICAL LEVEL

**X12 Segment Name:** Hierarchical Level**X12 Purpose:** To identify dependencies among and the content of hierarchically related groups of data segments**X12 Comments:** 1. The HL segment is used to identify levels of detail information using a hierarchical structure, such as relating line-item data to shipment data, and packaging data to line-item data.

2. The HL segment defines a top-down/left-right ordered structure.

**Loop:** 2000A — BILLING PROVIDER HIERARCHICAL LEVEL **Loop Repeat:** >1**Segment Repeat:** 1**Usage:** REQUIRED**TR3 Example:** HL\*1\*\*20\*1~

## CUR - FOREIGN CURRENCY INFORMATION

**X12 Segment Name:** Currency

**X12 Purpose:** To specify the currency (dollars, pounds, francs, etc.) used in a transaction

**X12 Syntax:** 1. **C0807**

If CUR08 is present, then CUR07 is required.

2. **C0907**

If CUR09 is present, then CUR07 is required.

3. **L101112**

If CUR10 is present, then at least one of CUR11 or CUR12 are required.

4. **C1110**

If CUR11 is present, then CUR10 is required.

5. **C1210**

If CUR12 is present, then CUR10 is required.

6. **L131415**

If CUR13 is present, then at least one of CUR14 or CUR15 are required.

7. **C1413**

If CUR14 is present, then CUR13 is required.

8. **C1513**

If CUR15 is present, then CUR13 is required.

9. **L161718**

If CUR16 is present, then at least one of CUR17 or CUR18 are required.

10. **C1716**

If CUR17 is present, then CUR16 is required.

11. **C1816**

If CUR18 is present, then CUR16 is required.

12. **L192021**

If CUR19 is present, then at least one of CUR20 or CUR21 are required.

13. **C2019**

If CUR20 is present, then CUR19 is required.

14. **C2119**

If CUR21 is present, then CUR19 is required.

**X12 Comments:** 1. See Figures Appendix for examples detailing the use of the CUR segment.

**Loop:** 2000A — BILLING PROVIDER HIERARCHICAL LEVEL

**Segment Repeat:** 1

**Usage:** SITUATIONAL

**Situational Rule:** Required when the amounts represented in this transaction are currencies other than the United States dollar. If not required by this implementation guide, do not send.

**TR3 Notes:** 1. It is **REQUIRED** that all amounts reported within the transaction are of the currency named in this segment. If this segment is not used, then it is required that all amounts in this transaction be expressed in US dollars.

**TR3 Example:** CUR\*85\*CAD~

## SEGMENT DETAIL

**NM1 - BILLING PROVIDER NAME**

**X12 Segment Name:** Individual or Organizational Name

**X12 Purpose:** To supply the full name of an individual or organizational entity

**X12 Set Notes:** 1. Loop 2010 contains information about entities that apply to all claims in loop 2300. For example, these entities may include billing provider, pay-to provider, insurer, primary administrator, contract holder, or claimant.

**X12 Syntax:** 1. **P0809**  
If either NM108 or NM109 is present, then the other is required.

2. **C1110**  
If NM111 is present, then NM110 is required.

3. **C1203**  
If NM112 is present, then NM103 is required.

**Loop:** 2010AA — BILLING PROVIDER NAME **Loop Repeat:** 1

**Segment Repeat:** 1

**Usage:** REQUIRED

**TR3 Notes:** 1. **Beginning on the NPI compliance date: When the Billing Provider is an organization health care provider, the organization health care provider's NPI or its subpart's NPI is reported in NM109. When a health care provider organization has determined that it needs to enumerate its subparts, it will report the NPI of a subpart as the Billing Provider. The subpart reported as the Billing Provider MUST always represent the most detailed level of enumeration as determined by the organization health care provider and MUST be the same identifier sent to any trading partner. For additional explanation, see section 1.10.3 Organization Health Care Provider Subpart Presentation.**

2. **Prior to the NPI compliance date, proprietary identifiers necessary for the receiver to identify the Billing Provider entity are to be reported in the REF segment of Loop ID-2010BB.**

3. **The Taxpayer Identifying Number (TIN) of the Billing Provider to be used for 1099 purposes must be reported in the REF segment of this loop.**

4. **The Billing Provider may be an individual only when the health care provider performing services is an independent, unincorporated entity. In these cases, the Billing Provider is the individual whose social security number is used for 1099 purposes. That individual's NPI is reported in NM109, and the individual's Tax Identification Number must be reported in the REF segment of this loop. The individual's NPI must be reported when the individual provider is eligible for an NPI. See section 1.10.1 (Providers who are Not Eligible for Enumeration).**

5. When the individual or the organization is not a health care provider and, thus, not eligible to receive an NPI (For example, personal care services, carpenters, etc), the Billing Provider should be the legal entity. However, willing trading partners may agree upon varying definitions. Proprietary identifiers necessary for the receiver to identify the entity are to be reported in the Loop ID-2010BB REF, Billing Provider Secondary Identification segment. The TIN to be used for 1099 purposes must be reported in the REF (Tax Identification Number) segment of this loop.

SEGMENT DETAIL

# REF - BILLING PROVIDER UPIN/LICENSE INFORMATION

**X12 Segment Name:** Reference Information

**X12 Purpose:** To specify identifying information

**X12 Syntax:** 1. R0203

At least one of REF02 or REF03 is required.

**Loop:** 2010AA — BILLING PROVIDER NAME

**Segment Repeat:** 2

**Usage:** SITUATIONAL

**Situational Rule:** Required prior to the mandated HIPAA National Provider Identifier (NPI) implementation date when a UPIN and/or license number is necessary for the receiver to identify the provider.  
OR  
Required on or after the mandated NPI implementation date when NM109 of this loop is not used and a UPIN or license number is necessary for the receiver to identify the provider.  
If not required by this implementation guide, do not send.

**TR3 Notes:** 1. Payer specific secondary identifiers are reported in the Loop ID-2010BB REF, Billing Provider Secondary Identification.

**TR3 Example:** REF\*0B\*654321~

SEGMENT DETAIL

## PER - BILLING PROVIDER CONTACT INFORMATION

**X12 Segment Name:** Administrative Communications Contact

**X12 Purpose:** To identify a person or office to whom administrative communications should be directed

**X12 Syntax:** 1. **P0304**

If either PER03 or PER04 is present, then the other is required.

2. **P0506**

If either PER05 or PER06 is present, then the other is required.

3. **P0708**

If either PER07 or PER08 is present, then the other is required.

**Loop:** 2010AA — BILLING PROVIDER NAME

**Segment Repeat:** 2

**Usage:** SITUATIONAL

**Situational Rule:** Required when this information is different than that contained in the Loop ID-1000A - Submitter PER segment. If not required by this implementation guide, do not send.

**TR3 Notes:**

1. When the communication number represents a telephone number in the United States and other countries using the North American Dialing Plan (for voice, data, fax, etc.), the communication number must always include the area code and phone number using the format AAABBBCCCC where AAA is the area code, BBB is the telephone number prefix, and CCCC is the telephone number. Therefore, the following telephone number (555) 555-1234 would be represented as 5555551234. Do not submit long distance access numbers, such as “1”, in the telephone number. Telephone extensions, when applicable, must be submitted in the next element immediately following the telephone number. When submitting telephone extensions, only submit the numeric extension. Do not include data that indicates an extension, such as “ext” or “x-”.

2. There are 2 repetitions of the PER segment to allow for six possible combinations of communication numbers including extensions.

**TR3 Example:** PER\*IC\*JOHN SMITH\*TE\*5555551234\*EX\*123~

## SEGMENT DETAIL

## NM1 - PAY-TO ADDRESS NAME

**X12 Segment Name:** Individual or Organizational Name**X12 Purpose:** To supply the full name of an individual or organizational entity**X12 Set Notes:** 1. Loop 2010 contains information about entities that apply to all claims in loop 2300. For example, these entities may include billing provider, pay-to provider, insurer, primary administrator, contract holder, or claimant.**X12 Syntax:** 1. **P0809**  
If either NM108 or NM109 is present, then the other is required.2. **C1110**  
If NM111 is present, then NM110 is required.3. **C1203**  
If NM112 is present, then NM103 is required.**Loop:** 2010AB — PAY-TO ADDRESS NAME **Loop Repeat:** 1**Segment Repeat:** 1**Usage:** SITUATIONAL**Situational Rule:** Required when the address for payment is different than that of the Billing Provider. If not required by this implementation guide, do not send.**TR3 Notes:** 1. The purpose of Loop ID-2010AB has changed from previous versions. Loop ID-2010AB only contains address information when different from the Billing Provider Address. There are no applicable identifiers for Pay-To Address information.**TR3 Example:** NM1\*87\*2~

## SEGMENT DETAIL

**HL - SUBSCRIBER HIERARCHICAL LEVEL****X12 Segment Name:** Hierarchical Level**X12 Purpose:** To identify dependencies among and the content of hierarchically related groups of data segments

- X12 Comments:**
1. The HL segment is used to identify levels of detail information using a hierarchical structure, such as relating line-item data to shipment data, and packaging data to line-item data.
  2. The HL segment defines a top-down/left-right ordered structure.

**Loop:** 2000B — SUBSCRIBER HIERARCHICAL LEVEL **Loop Repeat:** >1**Segment Repeat:** 1**Usage:** REQUIRED

- TR3 Notes:**
1. If a patient can be uniquely identified to the destination payer in Loop ID-2010BB by a unique Member Identification Number, then the patient is the subscriber or is considered to be the subscriber and is identified at this level, and the patient HL in Loop ID-2000C is not used.
  2. If the patient is not the subscriber and cannot be identified to the destination payer by a unique Member Identification Number or it is not known to the sender if the Member Identification number is unique, both this HL and the patient HL in Loop ID- 2000C are required.

**TR3 Example:** HL\*2\*1\*22\*1~

## SEGMENT DETAIL

# REF - PROPERTY AND CASUALTY CLAIM NUMBER

**X12 Segment Name:** Reference Information

**X12 Purpose:** To specify identifying information

**X12 Syntax:** 1. R0203

At least one of REF02 or REF03 is required.

**Loop:** 2010BA — SUBSCRIBER NAME

**Segment Repeat:** 1

**Usage:** SITUATIONAL

**Situational Rule:** Required when the services included in this claim are to be considered as part of a property and casualty claim. If not required by this implementation guide, do not send.

**TR3 Notes:** 1. This is a property and casualty payer-assigned claim number. Providers receive this number from the property and casualty payer during eligibility determinations or some other communication with that payer. See Section 1.4.2, Property and Casualty, for additional information about property and casualty claims.

2. This segment is not a HIPAA requirement as of this writing.

**TR3 Example:** REF\*Y4\*4445555~

SEGMENT DETAIL

# HL - PATIENT HIERARCHICAL LEVEL

**X12 Segment Name:** Hierarchical Level

**X12 Purpose:** To identify dependencies among and the content of hierarchically related groups of data segments

- X12 Comments:**
1. The HL segment is used to identify levels of detail information using a hierarchical structure, such as relating line-item data to shipment data, and packaging data to line-item data.
  2. The HL segment defines a top-down/left-right ordered structure.

**Loop:** 2000C — PATIENT HIERARCHICAL LEVEL **Loop Repeat:** >1

**Segment Repeat:** 1

**Usage:** SITUATIONAL

**Situational Rule:** Required when the patient is a dependent of the subscriber identified in Loop ID-2000B and cannot be uniquely identified to the payer using the subscriber's identifier in the Subscriber Level. If not required by this implementation guide, do not send.

**TR3 Notes:** 1. There are no HLs subordinate to the Patient HL.

2. If a patient is a dependent of a subscriber and can be uniquely identified to the payer by a unique Identification Number, then the patient is considered the subscriber and is to be identified in the Subscriber Level.

**TR3 Example:** HL\*3\*2\*23\*0~

## SEGMENT DETAIL

# PAT - PATIENT INFORMATION

**X12 Segment Name:** Patient Information

**X12 Purpose:** To supply patient information

**X12 Syntax:** 1. **P0506**

If either PAT05 or PAT06 is present, then the other is required.

2. **P0708**

If either PAT07 or PAT08 is present, then the other is required.

**Loop:** 2000C — PATIENT HIERARCHICAL LEVEL

**Segment Repeat:** 1

**Usage:** REQUIRED

**TR3 Example:** PAT\*01~

SEGMENT DETAIL

# NM1 - PATIENT NAME

**X12 Segment Name:** Individual or Organizational Name

**X12 Purpose:** To supply the full name of an individual or organizational entity

**X12 Set Notes:** 1. Loop 2010 contains information about entities that apply to all claims in loop 2300. For example, these entities may include billing provider, pay-to provider, insurer, primary administrator, contract holder, or claimant.

**X12 Syntax:** 1. **P0809**  
If either NM108 or NM109 is present, then the other is required.

2. **C1110**  
If NM111 is present, then NM110 is required.

3. **C1203**  
If NM112 is present, then NM103 is required.

**Loop:** 2010CA — PATIENT NAME **Loop Repeat:** 1

**Segment Repeat:** 1

**Usage:** REQUIRED

**TR3 Example:** NM1\*QC\*1\*DOE\*SALLY\*J~

## SEGMENT DETAIL

**CLM - CLAIM INFORMATION****X12 Segment Name:** Health Claim**X12 Purpose:** To specify basic data about the claim**Loop:** 2300 — CLAIM INFORMATION **Loop Repeat:** 100**Segment Repeat:** 1**Usage:** REQUIRED

**TR3 Notes:** 1. The developers of this implementation guide recommend that trading partners limit the size of the transaction (ST-SE envelope) to a maximum of 5000 CLM segments. There is no recommended limit to the number of ST-SE transactions within a GS-GE or ISA-IEA. Willing trading partners can agree to set limits higher.

2. For purposes of this documentation, the claim detail information is presented only in the dependent level. Specific claim detail information can be given in either the subscriber or the dependent hierarchical level. Because of this, the claim information is said to “float.” Claim information is positioned in the same hierarchical level that describes its owner-participant, either the subscriber or the dependent. In other words, the claim information, Loop ID-2300, is placed following Loop ID-2010BB in the Subscriber Hierarchical Level (HL) when patient information is sent in Loop ID-2010BA of the Subscriber HL. Claim information is placed in the Patient HL when the patient information is sent in Loop ID-2010CA of the Patient HL. When the patient is the subscriber or is considered to be the subscriber, Loop ID-2000C and Loop ID-2010CA are not sent. See Subscriber/Patient HL Segment explanation in section 1.4.3.2.2.1 for details.

Identifier used to track a claim from creation by the health care provider through payment

IMPLEMENTATION NAME: Patient Control Number

The number that the submitter transmits in this position is echoed back to the submitter in the 835 and other transactions. This permits the submitter to use the value in this field as a key in the submitter's system to match the claim to the payment information returned in the 835 transaction. The two recommended identifiers are either the Patient Account Number or the Claim Number in the billing submitter's patient management system. The developers of this implementation guide strongly recommend that submitters use unique numbers for this field for each individual claim.

**When Loop ID-2010AC is present, CLM01 represents the subrogated Medicaid agency's claim number (ICN/DCN) from their original 835 CLP07 - Payer Claim Control Number. See Section 1.4.1.4 of the front matter for a description of post payment recovery claims for subrogated Medicaid agencies.**

**The maximum number of characters to be supported for this field is '20'. Characters beyond the maximum are not required to be stored nor returned by any 837-receiving system.**

## SEGMENT DETAIL

# DTP - DATE - APPLIANCE PLACEMENT

**X12 Segment Name:** Date or Time or Period

**X12 Purpose:** To specify any or all of a date, a time, or a time period

**Loop:** 2300 — CLAIM INFORMATION

**Segment Repeat:** 1

**Usage:** SITUATIONAL

**Situational Rule:** Required when reporting the date orthodontic appliances were placed. If not required by this implementation guide, do not send.

**TR3 Notes:** 1. Dates in Loop ID-2300 apply to all service lines within Loop ID-2400 unless a DTP segment occurs in Loop ID-2400 with the same value in DTP01. In that case, the DTP in Loop ID-2400 overrides the DTP in Loop ID-2300 for that service line only.

**TR3 Example:** DTP\*452\*D8\*20060108~

## SEGMENT DETAIL

## DN1 - ORTHODONTIC TOTAL MONTHS OF TREATMENT

X12 Segment Name: Orthodontic Information

X12 Purpose: To supply orthodontic information

Loop: 2300 — CLAIM INFORMATION

Segment Repeat: 1

Usage: SITUATIONAL

Situational Rule: Required when the claim contains services related to treatment for orthodontic purposes. If not required by this implementation guide, do not send.

TR3 Notes: 1. When reporting this segment, at least one of DN101, DN102 or DN104 must be present.

TR3 Example: DN1\*36\*27~

TR3 Example: DN1\*\*\*\*\*Y~

## SEGMENT DETAIL

**PWK - CLAIM SUPPLEMENTAL INFORMATION****X12 Segment Name:** Paperwork**X12 Purpose:** To identify the type or transmission or both of paperwork or supporting information**X12 Syntax:** 1. P0506

If either PWK05 or PWK06 is present, then the other is required.

**Loop:** 2300 — CLAIM INFORMATION**Segment Repeat:** 10**Usage:** SITUATIONAL

**Situational Rule:** Required when there is a paper attachment following this claim.  
OR  
Required when attachments are sent electronically (PWK02 = EL) but are transmitted in another functional group (for example, 275) rather than by paper. PWK06 is then used to identify the attached electronic documentation. The number in PWK06 is carried in the TRN of the electronic attachment.  
OR  
Required when the provider deems it necessary to identify additional information that is being held at the provider's office and is available upon request by the payer (or appropriate entity), but the information is not being submitted with the claim. Use the value of "AA" in PWK02 to convey this specific use of the PWK segment.  
If not required by this implementation guide, do not send.

**TR3 Example:** PWK\*OZ\*BM\*\*\*AC\*DMN0012~

SEGMENT DETAIL

## CN1 - CONTRACT INFORMATION

**X12 Segment Name:** Contract Information

**X12 Purpose:** To specify basic data about the contract or contract line item

**Loop:** 2300 — CLAIM INFORMATION

**Segment Repeat:** 1

**Usage:** SITUATIONAL

**Situational Rule:** Required when the submitter is contractually obligated to supply this information on post-adjudicated claims. If not required by this implementation guide, do not send.

**TR3 Notes:** 1. The developers of this implementation guide note that the CN1 segment is for use only for post-adjudicated claims, which do not meet the definition of a health care claim under HIPAA. Consequently, at the time of this writing, the CN1 segment is for non-HIPAA use only.

**TR3 Example:** CN1\*02\*550~

## SEGMENT DETAIL

## REF - REFERRAL NUMBER

**X12 Segment Name:** Reference Information**X12 Purpose:** To specify identifying information**X12 Syntax:** 1. R0203

At least one of REF02 or REF03 is required.

**Loop:** 2300 — CLAIM INFORMATION**Segment Repeat:** 1**Usage:** SITUATIONAL

**Situational Rule:** Required when a referral number is assigned by the payer or Utilization Management Organization (UMO)  
AND  
a referral is involved.  
If not required by this implementation guide, do not send.

**TR3 Notes:** 1. Numbers at this position apply to the entire claim unless they are overridden in the REF segment in Loop ID-2400. A reference identification is considered to be overridden if the value in REF01 is the same in both the Loop ID-2300 REF segment and the Loop ID-2400 REF segment. In that case, the Loop ID-2400 REF applies only to that specific line.

2. This segment must not be used to report the Predetermination of Benefits Identification Number.

**TR3 Example:** REF\*9F\*12345~

## SEGMENT DETAIL

## REF - PRIOR AUTHORIZATION

**X12 Segment Name:** Reference Information**X12 Purpose:** To specify identifying information**X12 Syntax:** 1. R0203

At least one of REF02 or REF03 is required.

**Loop:** 2300 — CLAIM INFORMATION**Segment Repeat:** 1**Usage:** SITUATIONAL

**Situational Rule:** Required when an authorization number is assigned by the payer or UMO AND the services on this claim were preauthorized. If not required by this implementation guide, do not send.

**TR3 Notes:**

1. Generally, preauthorization numbers are assigned by the payer or UMO to authorize a service prior to its being performed. The UMO (Utilization Management Organization) is generally the entity empowered to make a decision regarding the outcome of a health services review or the owner of information. The prior authorization number carried in this REF is specific to the destination payer reported in the Loop ID-2010BB. If other payers have similar numbers for this claim, report that information in the Loop ID-2330 loop REF which holds that payer's information.

2. This segment must not be used to report the Predetermination of Benefits Identification Number.

3. Numbers at this position apply to the entire claim unless they are overridden in the REF segment in Loop ID-2400. A reference identification is considered to be overridden if the value in REF01 is the same in both the Loop ID-2300 REF segment and the Loop ID-2400 REF segment. In that case, the Loop ID-2400 REF applies only to that specific line.

## SEGMENT DETAIL

**REF - CLAIM IDENTIFIER FOR  
TRANSMISSION INTERMEDIARIES****X12 Segment Name:** Reference Information**X12 Purpose:** To specify identifying information**X12 Syntax:** 1. R0203

At least one of REF02 or REF03 is required.

**Loop:** 2300 — CLAIM INFORMATION**Segment Repeat:** 1**Usage:** SITUATIONAL**Situational Rule:** Required when this information is deemed necessary by transmission intermediaries (Automated Clearinghouses, and others) who need to attach their own unique claim number. If not required by this implementation guide, do not send.**TR3 Notes:** 1. Although this REF is supplied for transmission intermediaries to attach their own unique claim number to a claim, 837-recipients are not required under HIPAA to return this number in any HIPAA transaction. Trading partners may voluntarily agree to this interaction if they wish.**TR3 Example:** REF\*D9\*TJ98UU321~

## SEGMENT DETAIL

**K3 - FILE INFORMATION****X12 Segment Name:** File Information**X12 Purpose:** To transmit a fixed-format record or matrix contents**Loop:** 2300 — CLAIM INFORMATION**Segment Repeat:** 10**Usage:** SITUATIONAL**Situational Rule:** Required when ALL of the following conditions are met:

- A regulatory agency concludes it must use the K3 to meet an emergency legislative requirement;
  - The administering regulatory agency or other state organization has completed each one of the following steps:
    - contacted the X12N workgroup,
    - requested a review of the K3 data requirement to ensure there is not an existing method within the implementation guide to meet this requirement
  - X12N determines that there is no method to meet the requirement.
- If not required by this implementation guide, do not send.

**TR3 Notes:**

1. At the time of publication of this implementation, K3 segments have no specific use. The K3 segment is expected to be used only when necessary to meet the unexpected data requirement of a legislative authority. Before this segment can be used :
  - The X12N Health Care Claim workgroup must conclude there is no other available option in the implementation guide to meet the emergency legislative requirement.
  - The requestor must submit a proposal for approval accompanied by the relevant business documentation to the X12N Health Care Claim workgroup chairs and receive approval for the request.Upon review of the request, X12N will issue an approval or denial decision to the requesting entity. Approved usage(s) of the K3 segment will be reviewed by the X12N Health Care Claim workgroup to develop a permanent change to include the business case in future transaction implementations.
2. Only when all of the requirements above have been met, may the regulatory agency require the temporary use of the K3 segment.
3. X12N will submit the necessary data maintenance and refer the request to the appropriate data content committee(s).

## SEGMENT DETAIL

## NTE - CLAIM NOTE

**X12 Segment Name:** Note/Special Instruction**X12 Purpose:** To transmit information in a free-form format, if necessary, for comment or special instruction**X12 Comments:** 1. The NTE segment permits free-form information/data which, under ANSI X12 standard implementations, is not machine processible. The use of the NTE segment should therefore be avoided, if at all possible, in an automated environment.**Loop:** 2300 — CLAIM INFORMATION**Segment Repeat:** 5**Usage:** SITUATIONAL**Situational Rule:** Required when in the judgment of the provider, the information is needed to substantiate the medical treatment and is not supported elsewhere within the claim data set.  
If not required by this implementation guide, do not send.**TR3 Notes:** 1. The developers of this implementation guide discourage using narrative information within the 837. Trading partners who use narrative information with claims are strongly encouraged to codify that information within the X12 environment.**TR3 Example:** NTE\*ADD\*PATIENT IS EXTREMELY SENSITIVE TO PAIN AND REQUIRES ADDITIONAL SEDATION~

# HI - HEALTH CARE DIAGNOSIS CODE

**X12 Segment Name:** Health Care Information Codes

**X12 Purpose:** To supply information related to the delivery of health care

**Loop:** 2300 — CLAIM INFORMATION

**Segment Repeat:** 1

**Usage:** SITUATIONAL

**Situational Rule:** Required when the diagnosis may have an impact on the adjudication of the claim in cases where specific dental procedures may minimize the risks associated with the connection between the patient's oral and systemic health conditions. If not required by this implementation guide, do not send.

**TR3 Notes:** 1. Do not transmit the decimal point for ICD codes. The decimal point is implied.

SEGMENT DETAIL

# NM1 - REFERRING PROVIDER NAME

**X12 Segment Name:** Individual or Organizational Name

**X12 Purpose:** To supply the full name of an individual or organizational entity

**X12 Set Notes:** 1. Loop 2310 contains information about the rendering, referring, or attending provider.

**X12 Syntax:** 1. **P0809**  
If either NM108 or NM109 is present, then the other is required.

2. **C1110**  
If NM111 is present, then NM110 is required.

3. **C1203**  
If NM112 is present, then NM103 is required.

**Loop:** 2310A — REFERRING PROVIDER NAME **Loop Repeat:** 2

**Segment Repeat:** 1

**Usage:** SITUATIONAL

**Situational Rule:** Required when this claim involves a referral. If not required by this implementation guide, do not send.

**TR3 Notes:** 1. When reporting the provider who ordered services such as diagnostic and lab, use the 2310A loop at the claim level.

2. When there is only one referral on the claim, use code “DN - Referring Provider”. When more than one referral exists and there is a requirement to report the additional referral, use code DN in the first iteration of this loop to indicate the referral received by the rendering provider on this claim. Use code “P3 - Primary Care Provider” in the second iteration of the loop to indicate the initial referral from the primary care provider or whatever provider wrote the initial referral for this patient’s episode of care being billed/reported in this transaction.

**TR3 Example:** NM1\*DN\*1\*WELBY\*MARCUS\*W\*\*JR\*XX\*1234567891~

SEGMENT DETAIL

# REF - REFERRING PROVIDER SECONDARY IDENTIFICATION

**X12 Segment Name:** Reference Information

**X12 Purpose:** To specify identifying information

**X12 Syntax:** 1. R0203

At least one of REF02 or REF03 is required.

**Loop:** 2310A — REFERRING PROVIDER NAME

**Segment Repeat:** 3

**Usage:** SITUATIONAL

**Situational Rule:** Required prior to the mandated HIPAA National Provider Identifier (NPI) implementation date when an identification number other than the NPI is necessary for the receiver to identify the provider.  
OR  
Required on or after the mandated NPI Implementation Date when NM109 in this loop is not used and an identification number other than the NPI is necessary for the receiver to identify the provider.  
If not required by this implementation guide, do not send.

**TR3 Notes:** 1. The REF segment in Loop ID-2310 applies to the entire claim unless overridden on the service line level by the presence of a REF segment with the same value in REF01.

**TR3 Example:** REF\*G2\*12345~

SEGMENT DETAIL

# NM1 - RENDERING PROVIDER NAME

**X12 Segment Name:** Individual or Organizational Name

**X12 Purpose:** To supply the full name of an individual or organizational entity

**X12 Set Notes:** 1. Loop 2310 contains information about the rendering, referring, or attending provider.

**X12 Syntax:** 1. **P0809**  
If either NM108 or NM109 is present, then the other is required.

2. **C1110**  
If NM111 is present, then NM110 is required.

3. **C1203**  
If NM112 is present, then NM103 is required.

**Loop:** 2310B — RENDERING PROVIDER NAME **Loop Repeat:** 1

**Segment Repeat:** 1

**Usage:** SITUATIONAL

**Situational Rule:** Required when the Rendering Provider NM1 information is different than that carried in the Billing Provider loop (Loop ID-2010AA) and the Assistant Surgeon loop (Loop ID-2310D) is not used. If not required by this implementation guide, do not send.

**TR3 Notes:** 1. Used for all types of rendering providers including laboratories. The Rendering Provider is the person or company (laboratory or other facility) who rendered the care. In the case where a substitute provider (locum tenens) was used, enter that provider's information here.

2. Information in Loop ID-2310 applies to the entire claim unless overridden on a service line by the presence of Loop ID-2420 with the same value in NM101.

**TR3 Example:** NM1\*82\*1\*DOE\*JANE\*C\*\*\*XX\*1234567804~

SEGMENT DETAIL

# REF - RENDERING PROVIDER SECONDARY IDENTIFICATION

**X12 Segment Name:** Reference Information

**X12 Purpose:** To specify identifying information

**X12 Syntax:** 1. R0203

At least one of REF02 or REF03 is required.

**Loop:** 2310B — RENDERING PROVIDER NAME

**Segment Repeat:** 4

**Usage:** SITUATIONAL

**Situational Rule:** Required prior to the mandated HIPAA National Provider Identifier (NPI) implementation date when an identification number other than the NPI is necessary for the receiver to identify the provider.  
OR  
Required on or after the mandated NPI Implementation Date when NM109 in this loop is not used and an identification number other than the NPI is necessary for the receiver to identify the provider.  
If not required by this implementation guide, do not send.

**TR3 Notes:** 1. The REF segment in Loop ID-2310 applies to the entire claim unless overridden on the service line level by the presence of a REF segment with the same value in REF01.

**TR3 Example:** REF\*G2\*12345~

SEGMENT DETAIL

## NM1 - SERVICE FACILITY LOCATION NAME

**X12 Segment Name:** Individual or Organizational Name

**X12 Purpose:** To supply the full name of an individual or organizational entity

**X12 Set Notes:** 1. Loop 2310 contains information about the rendering, referring, or attending provider.

**X12 Syntax:**

1. **P0809**  
If either NM108 or NM109 is present, then the other is required.
2. **C1110**  
If NM111 is present, then NM110 is required.
3. **C1203**  
If NM112 is present, then NM103 is required.

**Loop:** 2310C — SERVICE FACILITY LOCATION NAME **Loop Repeat:** 1

**Segment Repeat:** 1

**Usage:** SITUATIONAL

**Situational Rule:** Required when the location of health care service is different than that carried in Loop ID-2010AA (Billing Provider).  
If not required by this implementation guide, do not send.

**TR3 Notes:**

1. When an organization health care provider's NPI is provided to identify the Service Location, the organization health care provider must be external to the entity identified as the Billing Provider (for example, reference lab). It is not permissible to report an organization health care provider NPI as the Service Location if the entity being identified is a component (for example, subpart) of the Billing Provider. In that case, the subpart must be the Billing Provider.

2. When the service(s) was rendered in the patient's home (the address reported as the patient address in the Subscriber or Patient loop), do not use the Service Facility Location loop. In that case, the place of service code in CLM05-1 indicates that the service occurred in the patient's home.

3. The purpose of this loop is to identify specifically where the service was rendered.

4. Information in Loop ID-2310 applies to the entire claim unless overridden on a service line by the presence of Loop ID-2420 with the same value in NM101.

**TR3 Example:** NM1\*77\*2\*A-OK MOBILE CLINIC\*\*\*\*\*XX\*112233301~

## SEGMENT DETAIL

# NM1 - SUPERVISING PROVIDER NAME

**X12 Segment Name:** Individual or Organizational Name

**X12 Purpose:** To supply the full name of an individual or organizational entity

**X12 Set Notes:** 1. Loop 2310 contains information about the rendering, referring, or attending provider.

**X12 Syntax:** 1. **P0809**  
If either NM108 or NM109 is present, then the other is required.

2. **C1110**  
If NM111 is present, then NM110 is required.

3. **C1203**  
If NM112 is present, then NM103 is required.

**Loop:** 2310E — SUPERVISING PROVIDER NAME **Loop Repeat:** 1

**Segment Repeat:** 1

**Usage:** SITUATIONAL

**Situational Rule:** Required when the rendering provider is supervised by a physician or dentist. If not required by this implementation guide, do not send.

**TR3 Notes:** 1. Information in Loop ID-2310 applies to the entire claim unless overridden on a service line by the presence of Loop ID-2420 with the same value in NM101.

**TR3 Example:** NM1\*DQ\*1\*SMITH\*JOHN\*A\*\*\*XX\*2223334444~

## SEGMENT DETAIL

**CAS - CLAIM LEVEL ADJUSTMENTS****X12 Segment Name:** Claims Adjustment**X12 Purpose:** To supply adjustment reason codes and amounts as needed for an entire claim or for a particular service within the claim being paid

- X12 Syntax:**
1. **L050607**  
If CAS05 is present, then at least one of CAS06 or CAS07 are required.
  2. **C0605**  
If CAS06 is present, then CAS05 is required.
  3. **C0705**  
If CAS07 is present, then CAS05 is required.
  4. **L080910**  
If CAS08 is present, then at least one of CAS09 or CAS10 are required.
  5. **C0908**  
If CAS09 is present, then CAS08 is required.
  6. **C1008**  
If CAS10 is present, then CAS08 is required.
  7. **L111213**  
If CAS11 is present, then at least one of CAS12 or CAS13 are required.
  8. **C1211**  
If CAS12 is present, then CAS11 is required.
  9. **C1311**  
If CAS13 is present, then CAS11 is required.
  10. **L141516**  
If CAS14 is present, then at least one of CAS15 or CAS16 are required.
  11. **C1514**  
If CAS15 is present, then CAS14 is required.
  12. **C1614**  
If CAS16 is present, then CAS14 is required.
  13. **L171819**  
If CAS17 is present, then at least one of CAS18 or CAS19 are required.
  14. **C1817**  
If CAS18 is present, then CAS17 is required.
  15. **C1917**  
If CAS19 is present, then CAS17 is required.

**X12 Comments:** 1. Adjustment information is intended to help the provider balance the remittance information. Adjustment amounts should fully explain the difference between submitted charges and the amount paid.

**Loop:** 2320 — OTHER SUBSCRIBER INFORMATION**Segment Repeat:** 5**Usage:** SITUATIONAL

**Situational Rule:** Required when the claim has been adjudicated by the payer identified in this loop, and the claim has claim level adjustment information. If not required by this implementation guide, do not send.

- TR3 Notes:**
1. Submitters must use this CAS segment to report prior payers' claim level adjustments that cause the amount paid to differ from the amount originally charged.
  2. Only one Group Code is allowed per CAS. If it is necessary to send more than one Group Code at the claim level, repeat the CAS segment.
  3. Codes and associated amounts must come from either paper remittance advice or 835s (Electronic Remittance Advice) received on the claim. When the information originates from a paper remittance advice that does not use the standard Claim Adjustment Reason Codes, the paper values must be converted to standard Claim Adjustment Reason Codes.
  4. A single CAS segment contains six repetitions of the "adjustment trio" composed of adjustment reason code, adjustment amount, and adjustment quantity. These six adjustment trios are used to report up to six adjustments related to a particular Claim Adjustment Group Code (CAS01). The first non-zero adjustment is reported in the first adjustment trio (CAS02-CAS04). If there is a second non-zero adjustment, it is reported in the second adjustment trio (CAS05-CAS07), and so on through the sixth adjustment trio (CAS17-CAS19).

## SEGMENT DETAIL

**AMT - REMAINING PATIENT LIABILITY****X12 Segment Name:** Monetary Amount Information**X12 Purpose:** To indicate the total monetary amount**Loop:** 2320 — OTHER SUBSCRIBER INFORMATION**Segment Repeat:** 1**Usage:** SITUATIONAL**Situational Rule:** Required when the Other Payer identified in Loop ID-2330B (of this iteration of Loop ID-2320) has adjudicated this claim and provided claim level information only.

OR

Required when the Other Payer identified in Loop ID-2330B (of this iteration of Loop ID-2320) has adjudicated this claim and the provider received a paper remittance advice and the provider does not have the ability to report line item information.

If not required by this implementation guide, do not send.

**TR3 Notes:** 1. In the judgment of the provider, this is the remaining amount to be paid after adjudication by the Other Payer identified in Loop ID-2330B of this iteration of Loop ID-2320.

2. This segment is only used in provider submitted claims. It is not used in Payer-to-Payer Coordination of Benefits (COB).

3. This segment is not used if the line level (Loop ID-2430) Remaining Patient Liability AMT segment is used for this Other Payer.

**TR3 Example:** AMT\*EAF\*75~

If NM112 is present, then NM103 is required.

**Loop:** 2330A — OTHER SUBSCRIBER NAME **Loop Repeat:** 1**Segment Repeat:** 1**Usage:** REQUIRED

**TR3 Notes:** 1. If the patient can be uniquely identified to the Other Payer indicated in this iteration of Loop ID-2320 by a unique Member Identification Number, then the patient is the subscriber or is considered to be the subscriber and is identified in this Other Subscriber's Name Loop ID-2330A.

2. If the patient is a dependent of the subscriber for this other coverage and cannot be uniquely identified to the Other Payer indicated in this iteration of Loop ID-2320 by a unique Member Identification Number, then the subscriber for this other coverage is identified in this Other Subscriber's Name Loop ID-2330A.

3. See Crosswalking COB Data Elements section for more information on handling COB in the 837.

In the event that a Social Security Number (SSN) is also available on an IHS/CHS claim, put the SSN in REF02.<br><br>When sending the Social Security Number as the Member ID, it must be a string of exactly nine numbers with no separators. For example, sending "111002222" would be valid, while sending "111-00-2222" would be invalid. |      |                                                                                                                                                     |     |    |      |      |            |    |                                                                                                                                                                                                        |    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

## SEGMENT DETAIL

**NM1 - OTHER PAYER REFERRING PROVIDER****X12 Segment Name:** Individual or Organizational Name**X12 Purpose:** To supply the full name of an individual or organizational entity**X12 Set Notes:** 1. Segments NM1-N4 contain name and address information of the insurance carriers referenced in loop 2320.

**X12 Syntax:** 1. **P0809**  
If either NM108 or NM109 is present, then the other is required.

2. **C1110**  
If NM111 is present, then NM110 is required.

3. **C1203**  
If NM112 is present, then NM103 is required.

**Loop:** 2330C — OTHER PAYER REFERRING PROVIDER **Loop Repeat:** 2**Segment Repeat:** 1**Usage:** SITUATIONAL

**Situational Rule:** Required prior to the mandated implementation of the HIPAA National Provider Identifier (NPI) rule when the provider in the corresponding Loop ID-2310 is sent and one or more additional payer-specific provider identification numbers are required by this non-destination payer (Loop ID-2330B) to identify the provider.

OR

Required after the mandated implementation of the NPI rule for providers who are not Health Care Providers when the provider is sent in the corresponding Loop ID-2310 and one or more additional payer-specific provider identification numbers are required by this non-destination payer (Loop ID-2330B) to identify the provider.

If not required by this implementation guide, do not send.

**TR3 Notes:** 1. See Crosswalking COB Data Elements section for more information on handling COB in the 837.**TR3 Example:** NM1\*DN\*1~

**LX - SERVICE LINE NUMBER****X12 Segment Name:** Transaction Set Line Number**X12 Purpose:** To reference a line number in a transaction set**X12 Set Notes:** 1. Loop 2400 contains Service Line information.**Loop:** 2400 — SERVICE LINE NUMBER **Loop Repeat:** 50**Segment Repeat:** 1**Usage:** REQUIRED**TR3 Notes:** 1. The LX functions as a line counter.

2. The Service Line LX segment must begin with one and is incremented by one for each additional service line of a claim.

3. LX01 is used to indicate bundling in SVD06 in the Line Item Adjudication loop. See Section 1.4.1.2 for more information on bundling and unbundling.

**TR3 Example:** LX\*1~

SEGMENT DETAIL

## TOO - TOOTH INFORMATION

**X12 Segment Name:** Tooth Identification

**X12 Purpose:** To identify a tooth by number and, if applicable, one or more tooth surfaces

**X12 Syntax:** 1. P0102

If either TOO01 or TOO02 is present, then the other is required.

**Loop:** 2400 — SERVICE LINE NUMBER

**Segment Repeat:** 32

**Usage:** SITUATIONAL

**Situational Rule:** Required when reporting tooth information related to this service line. If not required by this implementation guide, do not send.

**TR3 Notes:** 1. Multiple iterations of the TOO segment are allowed only when the quantity reported in Loop ID-2400 SV306 is equal to one.

**TR3 Example:** TOO\*JP\*12\*L:O~

**Segment Repeat:** 1

**Usage:** SITUATIONAL

**Situational Rule:** Required when the service was performed and the service date is different than the date reported in the Service Date segment in the 2300 loop. If not required by this implementation guide, do not send.

**TR3 Notes:** 1. Do not use this DTP segment when submitting a Predetermination of Dental Benefits.

2. Do not use this DTP segment when submitting a Treatment Start Date, Treatment Completion Date or both.

SEGMENT DETAIL

## CN1 - CONTRACT INFORMATION

**X12 Segment Name:** Contract Information

**X12 Purpose:** To specify basic data about the contract or contract line item

**Loop:** 2400 — SERVICE LINE NUMBER

**Segment Repeat:** 1

**Usage:** SITUATIONAL

**Situational Rule:** Required when the submitter is contractually obligated to supply this information on post-adjudicated claims. If not required by this implementation guide, do not send.

**TR3 Notes:** 1. The developers of this implementation guide note that the CN1 segment is for use only for post-adjudicated claims, which do not meet the definition of a health care claim under HIPAA. Consequently, at the time of this writing, the CN1 segment is for non-HIPAA use only.

## SEGMENT DETAIL

REF - SERVICE PREDETERMINATION  
IDENTIFICATION**X12 Segment Name:** Reference Information**X12 Purpose:** To specify identifying information**X12 Syntax:** 1. R0203

At least one of REF02 or REF03 is required.

**Loop:** 2400 — SERVICE LINE NUMBER**Segment Repeat:** 5**Usage:** SITUATIONAL**Situational Rule:** Required when sending the Predetermination of Benefits Identification Number for the line item that has been previously predetermined and is now being submitted for payment. If not required by this implementation guide, do not send.**TR3 Notes:** 1. Reference numbers at this position apply to the current line item only.

2. When it is necessary to report one or more non-destination payer Prior Authorization Numbers, the composite data element in REF04 is used to identify the payer which assigned this number.

**TR3 Example:** REF\*G3\*13579~

SEGMENT DETAIL

## REF - PRIOR AUTHORIZATION

**X12 Segment Name:** Reference Information

**X12 Purpose:** To specify identifying information

**X12 Syntax:** 1. R0203

At least one of REF02 or REF03 is required.

**Loop:** 2400 — SERVICE LINE NUMBER

**Segment Repeat:** 5

**Usage:** SITUATIONAL

**Situational Rule:** Required when service line involved a prior authorization number that is different than the number reported at the claim level (Loop ID-2300). If not required by this implementation guide, do not send.

**TR3 Notes:** 1. This segment must not be used to report the Predetermination of Benefits Identification Number.

2. When it is necessary to report one or more non-destination payer Prior Authorization Numbers, the composite data element in REF04 is used to identify the payer which assigned this number.

**TR3 Example:** REF\*G1\*13579~

SEGMENT DETAIL

## REF - LINE ITEM CONTROL NUMBER

**X12 Segment Name:** Reference Information

**X12 Purpose:** To specify identifying information

**X12 Syntax:** 1. R0203

At least one of REF02 or REF03 is required.

**Loop:** 2400 — SERVICE LINE NUMBER

**Segment Repeat:** 1

**Usage:** SITUATIONAL

**Situational Rule:** Required when the submitter needs a line item control number for subsequent communications to or from the payer. If not required by this implementation guide, do not send.

**TR3 Notes:** 1. The line item control number must be unique within a patient control number (CLM01). Payers are required to return this number in the remittance advice transaction (835) if the provider sends it to them in the 837 and adjudication is based upon line item detail regardless of whether bundling or unbundling has occurred.

2. Submitters are **STRONGLY** encouraged to routinely send a unique line item control number on all service lines, particularly if the submitter automatically posts their remittance advice. Submitting a unique line item control number allows the capability to automatically post by service line.

**TR3 Example:** REF\*6R\*54321~

## SEGMENT DETAIL

**K3 - FILE INFORMATION****X12 Segment Name:** File Information**X12 Purpose:** To transmit a fixed-format record or matrix contents**Loop:** 2400 — SERVICE LINE NUMBER**Segment Repeat:** 10**Usage:** SITUATIONAL**Situational Rule:** Required when ALL of the following conditions are met:

- A regulatory agency concludes it must use the K3 to meet an emergency legislative requirement;
  - The administering regulatory agency or other state organization has completed each one of the following steps:
    - contacted the X12N workgroup,
    - requested a review of the K3 data requirement to ensure there is not an existing method within the implementation guide to meet this requirement
  - X12N determines that there is no method to meet the requirement.
- If not required by this implementation guide, do not send.

**TR3 Notes:**

1. At the time of publication of this implementation, K3 segments have no specific use. The K3 segment is expected to be used only when necessary to meet the unexpected data requirement of a legislative authority. Before this segment can be used :
  - The X12N Health Care Claim workgroup must conclude there is no other available option in the implementation guide to meet the emergency legislative requirement.
  - The requestor must submit a proposal for approval accompanied by the relevant business documentation to the X12N Health Care Claim workgroup chairs and receive approval for the request.Upon review of the request, X12N will issue an approval or denial decision to the requesting entity. Approved usage(s) of the K3 segment will be reviewed by the X12N Health Care Claim workgroup to develop a permanent change to include the business case in future transaction implementations.
2. Only when all of the requirements above have been met, may the regulatory agency require the temporary use of the K3 segment.
3. X12N will submit the necessary data maintenance and refer the request to the appropriate data content committee(s).

SEGMENT DETAIL

# NM1 - RENDERING PROVIDER NAME

**X12 Segment Name:** Individual or Organizational Name

**X12 Purpose:** To supply the full name of an individual or organizational entity

**X12 Set Notes:** 1. Loop 2420 contains information about the rendering, referring, or attending provider on a service line level. These segments override the information in the claim - level segments if the entity identifier codes in each NM1 segment are the same.

**X12 Syntax:** 1. **P0809**  
If either NM108 or NM109 is present, then the other is required.

2. **C1110**  
If NM111 is present, then NM110 is required.

3. **C1203**  
If NM112 is present, then NM103 is required.

**Loop:** 2420A — RENDERING PROVIDER NAME **Loop Repeat:** 1

**Segment Repeat:** 1

**Usage:** SITUATIONAL

**Situational Rule:** Required when the Rendering Provider NM1 information is different than that carried in the Loop ID-2310B Rendering Provider and the Assistant Surgeon (Loop ID-2420C) loop is not present  
OR  
Required when each of the following conditions apply:

- the Rendering Provider information is carried at the Billing Provider level (Loop ID-2010AA)
- this particular line item has different Rendering Provider information than that which is carried in the Loop ID-2010AA Billing Provider
- the Assistant Surgeon loop (Loop ID-2420C) is not used.

If not required by this implementation guide, do not send.

**TR3 Notes:** 1. Used for all types of rendering providers including laboratories. The Rendering Provider is the person or company (laboratory or other facility) who rendered the care. In the case where a substitute provider (locum tenens) was used, enter that provider's information here.

**TR3 Example:** NM1\*82\*1\*DOE\*JANE\*C\*\*\*XX\*1234567804~

SEGMENT DETAIL

# NM1 - ASSISTANT SURGEON NAME

**X12 Segment Name:** Individual or Organizational Name

**X12 Purpose:** To supply the full name of an individual or organizational entity

**X12 Set Notes:** 1. Loop 2420 contains information about the rendering, referring, or attending provider on a service line level. These segments override the information in the claim - level segments if the entity identifier codes in each NM1 segment are the same.

**X12 Syntax:** 1. **P0809**  
If either NM108 or NM109 is present, then the other is required.

2. **C1110**  
If NM111 is present, then NM110 is required.

3. **C1203**  
If NM112 is present, then NM103 is required.

**Loop:** 2420B — ASSISTANT SURGEON NAME **Loop Repeat:** 1

**Segment Repeat:** 1

**Usage:** SITUATIONAL

**Situational Rule:** Required when the Rendering Provider provided these services in the role of the Assistant Surgeon and the Assistant Surgeon information in this loop is different from the Assistant Surgeon information sent in Loop ID-2310D.  
If not required by this implementation guide, do not send.

**TR3 Example:** NM1\*DD\*1\*SMITH\*JOHN\*S\*\*\*XX\*1234567899~

## SEGMENT DETAIL

**REF - ASSISTANT SURGEON SECONDARY IDENTIFICATION****X12 Segment Name:** Reference Information**X12 Purpose:** To specify identifying information**X12 Syntax:** 1. R0203

At least one of REF02 or REF03 is required.

**Loop:** 2420B — ASSISTANT SURGEON NAME**Segment Repeat:** 20**Usage:** SITUATIONAL

**Situational Rule:** Required prior to the mandated HIPAA National Provider Identifier (NPI) implementation date when an identification number other than the NPI is necessary for the receiver to identify the provider.

OR

Required on or after the mandated NPI Implementation Date when NM109 in this loop is not used and an identification number other than the NPI is necessary for the receiver to identify the provider.

If not required by this implementation guide, do not send.

- TR3 Notes:**
1. When it is necessary to send provider identifiers that are not payer-specific (e.g. UPIN, State License Number), those identifiers must be sent in the corresponding 2310 loop.
  2. When it is necessary to report one or more non-destination payer Secondary Identifiers, the composite data element in REF04 is used to identify the payer who assigned this identifier.

**TR3 Example:** REF\*G2\*12345~

## SEGMENT DETAIL

**NM1 - SUPERVISING PROVIDER NAME****X12 Segment Name:** Individual or Organizational Name**X12 Purpose:** To supply the full name of an individual or organizational entity**X12 Set Notes:** 1. Loop 2420 contains information about the rendering, referring, or attending provider on a service line level. These segments override the information in the claim - level segments if the entity identifier codes in each NM1 segment are the same.

- X12 Syntax:**
- P0809**  
If either NM108 or NM109 is present, then the other is required.
  - C1110**  
If NM111 is present, then NM110 is required.
  - C1203**  
If NM112 is present, then NM103 is required.

**Loop:** 2420C — SUPERVISING PROVIDER NAME **Loop Repeat:** 1**Segment Repeat:** 1**Usage:** SITUATIONAL**Situational Rule:** Required when the rendering provider is supervised by a physician or dentist and the supervising physician or dentist is different than that listed at the claim level for this service line. If not required by this implementation guide, do not send.**TR3 Example:** NM1\*DQ\*1\*SMITH\*JOHN\*A\*\*\*XX\*2223334444~

## SEGMENT DETAIL

**NM1 - SERVICE FACILITY LOCATION NAME****X12 Segment Name:** Individual or Organizational Name**X12 Purpose:** To supply the full name of an individual or organizational entity**X12 Set Notes:** 1. Loop 2420 contains information about the rendering, referring, or attending provider on a service line level. These segments override the information in the claim - level segments if the entity identifier codes in each NM1 segment are the same.**X12 Syntax:** 1. **P0809**  
If either NM108 or NM109 is present, then the other is required.  
2. **C1110**  
If NM111 is present, then NM110 is required.  
3. **C1203**  
If NM112 is present, then NM103 is required.**Loop:** 2420D — SERVICE FACILITY LOCATION NAME **Loop Repeat:** 1**Segment Repeat:** 1**Usage:** SITUATIONAL**Situational Rule:** Required when the location of health care service for this service line is different than that carried in Loop ID-2010AA Billing Provider or Loop ID-2310C Service Facility Location. If not required by this implementation guide, do not send.**TR3 Notes:** 1. When an organization health care provider's NPI is provided to identify the Service Location, the organization health care provider must be external to the entity identified as the Billing Provider (for example, reference lab). It is not permissible to report an organization health care provider NPI as the Service Location if the entity being identified is a component (for example, subpart) of the Billing Provider. In that case, the subpart must be the Billing Provider.**TR3 Example:** NM1\*77\*2\*ABC CLINIC\*\*\*\*\*XX\*1234567891~

## SEGMENT DETAIL

## SVD - LINE ADJUDICATION INFORMATION

**X12 Segment Name:** Service Line Adjudication**X12 Purpose:** To convey service line adjudication information for coordination of benefits between the initial payers of a health care claim and all subsequent payers**X12 Set Notes:** 1. SVD01 identifies the payer which adjudicated the corresponding service line and must match DE 67 in the NM109 position 325 for the payer.**Loop:** 2430 — LINE ADJUDICATION INFORMATION **Loop Repeat:** 15**Segment Repeat:** 1**Usage:** SITUATIONAL**Situational Rule:** Required when the claim has been previously adjudicated by payer identified in Loop ID-2330B and this service line has payments and/or adjustments applied to it. If not required by this implementation guide, do not send.**TR3 Notes:** 1. To show unbundled lines: If, in the original claim, line 3 is unbundled into (for example) 2 additional lines, then the SVD for line 3 is used 3 times: once for the original adjustment to line 3 and then two more times for the additional unbundled lines.**TR3 Example:** SVD\*43\*55\*AD:D0330\*\*1~

## SEGMENT DETAIL

**CAS - LINE ADJUSTMENT****X12 Segment Name:** Claims Adjustment**X12 Purpose:** To supply adjustment reason codes and amounts as needed for an entire claim or for a particular service within the claim being paid

- X12 Syntax:**
1. **L050607**  
If CAS05 is present, then at least one of CAS06 or CAS07 are required.
  2. **C0605**  
If CAS06 is present, then CAS05 is required.
  3. **C0705**  
If CAS07 is present, then CAS05 is required.
  4. **L080910**  
If CAS08 is present, then at least one of CAS09 or CAS10 are required.
  5. **C0908**  
If CAS09 is present, then CAS08 is required.
  6. **C1008**  
If CAS10 is present, then CAS08 is required.
  7. **L111213**  
If CAS11 is present, then at least one of CAS12 or CAS13 are required.
  8. **C1211**  
If CAS12 is present, then CAS11 is required.
  9. **C1311**  
If CAS13 is present, then CAS11 is required.
  10. **L141516**  
If CAS14 is present, then at least one of CAS15 or CAS16 are required.
  11. **C1514**  
If CAS15 is present, then CAS14 is required.
  12. **C1614**  
If CAS16 is present, then CAS14 is required.
  13. **L171819**  
If CAS17 is present, then at least one of CAS18 or CAS19 are required.
  14. **C1817**  
If CAS18 is present, then CAS17 is required.
  15. **C1917**  
If CAS19 is present, then CAS17 is required.

**X12 Comments:** 1. Adjustment information is intended to help the provider balance the remittance information. Adjustment amounts should fully explain the difference between submitted charges and the amount paid.

**Loop:** 2430 — LINE ADJUDICATION INFORMATION**Segment Repeat:** 5**Usage:** SITUATIONAL

**Situational Rule:** Required when the payer identified in Loop 2330B made line level adjustments which caused the amount paid to differ from the amount originally charged. If not required by this implementation guide, do not send.

**TR3 Notes:** 1. A single CAS segment contains six repetitions of the “adjustment trio” composed of adjustment reason code, adjustment amount, and adjustment quantity. These six adjustment trios are used to report up to six adjustments related to a particular Claim Adjustment Group Code (CAS01). The first non-zero adjustment is reported in the first adjustment trio (CAS02-CAS04). If there is a second non-zero adjustment, it is reported in the second adjustment trio (CAS05-CAS07), and so on through the sixth adjustment trio (CAS17-CAS19).

**TR3 Example:** CAS\*PR\*1\*7.93~

**TR3 Example:** CAS\*OA\*93\*15.06~

#### **ABSTRACT**

Part 1 (Country codes) of the ISO 3166 international standard establishes codes that represent the current names of countries, dependencies, and other areas of special geopolitical interest, on the basis of lists of country names obtained from the United Nations. Part 2 (Country subdivision codes) establishes a code that represents the names of the principal administrative divisions, or similar areas, of the countries, etc. included in Part 1. Part 3 (Codes for formerly used names of countries) establishes a code that represents non-current country names, i.e., the country names deleted from ISO 3166 since its first publication in 1974. Most currencies are those of the geopolitical entities that are listed in ISO 3166 Part 1, Codes for the Representation of Names of Countries. The code may be a three-character alphabetic or three-digit numeric. The two leftmost characters of the alphabetic code identify the currency authority to which the code is assigned (using the two character alphabetic code from ISO 3166 Part 1, if applicable). The rightmost character is a mnemonic derived from the name of the major currency unit or fund. For currencies not associated with a single geographic entity, a specially-allocated two-character alphabetic code, in the range XA to XZ identifies the currency authority. The rightmost character is derived from the name of the geographic area concerned, and is mnemonic to the extent possible. The numeric codes are identical to those assigned to the geographic entities listed in ISO 3166 Part 1. The range 950-998

is reserved for identification of funds and currencies not associated with a single entity listed in ISO 3166 Part 1.

**ABSTRACT**

The ZIP Code is a geographic identifier of areas within the United States and its territories for purposes of expediting mail distribution by the U.S. Postal Service. It is five or nine numeric digits. The ZIP Code structure divides the U.S. into ten large groups of states. The leftmost digit identifies one of these groups. The next two digits identify a smaller geographic area within the large group. The two rightmost digits identify a local delivery area. In the nine-digit ZIP Code, the four digits that follow the hyphen further subdivide the delivery area. The two leftmost digits identify a sector which may consist of several large buildings, blocks or groups of streets. The rightmost digits divide the sector into segments such as a street, a block, a floor of a building, or a cluster of mailboxes. The USPS Domestic Mail Manual includes information on the use of the new 11-digit zip code.

# B Nomenclature

## B.1 ASC X12 Nomenclature

### B.1.1 Interchange and Application Control Structures

Appendix B is provided as a reference to the X12 syntax, usage, and related information. It is not a full statement of Interchange and Control Structure rules. The full X12 Interchange and Control Structures and other rules (X12.5, X12.6, X12.59, X12 dictionaries, other X12 standards and official documents) apply unless specifically modified in the detailed instructions of this implementation guide (see Section B.1.1.3.1.2 - *Decimal* for an example of such a modification).

#### B.1.1.1 Interchange Control Structure

The transmission of data proceeds according to very strict format rules to ensure the integrity and maintain the efficiency of the interchange. Each business grouping of data is called a transaction set. For instance, a group of benefit enrollments sent from a sponsor to a payer is considered a transaction set.

Each transaction set contains groups of logically related data in units called segments. For instance, the N4 segment used in the transaction set conveys the city, state, ZIP Code, and other geographic information. A transaction set contains multiple segments, so the addresses of the different parties, for example, can be conveyed from one computer to the other. An analogy would be that the transaction set is like a freight train; the segments are like the train's cars; and each segment can contain several data elements the same as a train car can hold multiple crates.

The sequence of the elements within one segment is specified by the ASC X12 standard as well as the sequence of segments in the transaction set. In a more conventional computing environment, the segments would be equivalent to records, and the elements equivalent to fields.

Similar transaction sets, called "functional groups," can be sent together within a transmission. Each functional group is prefaced by a group start segment; and a functional group is terminated by a group end segment. One or more functional groups are prefaced by an interchange header and followed by an interchange trailer.

Figure B.1 - *Transmission Control Schematic*, illustrates this interchange control.

Figure B.1 - Transmission Control Schematic

The interchange header and trailer segments envelop one or more functional groups or interchange-related control segments and perform the following functions:

1. Define the data element separators and the data segment terminator.
2. Identify the sender and receiver.
3. Provide control information for the interchange.
4. Allow for authorization and security information.

## B.1.1.2 Application Control Structure Definitions and Concepts

### B.1.1.2.1 Basic Structure

A data element corresponds to a data field in data processing terminology. A data segment corresponds to a record in data processing terminology. The data segment

begins with a segment ID and contains related data elements. A control segment has the same structure as a data segment; the distinction is in the use. The data segment is used primarily to convey user information, but the control segment is used primarily to convey control information and to group data segments.

### B.1.1.2.2 Basic Character Set

The section that follows is designed to have representation in the common character code schemes of EBCDIC, ASCII, and CCITT International Alphabet 5. The ASC X12 standards are graphic-character-oriented; therefore, common character encoding schemes other than those specified herein may be used as long as a common mapping is available. Because the graphic characters have an implied mapping across character code schemes, those bit patterns are not provided here.

The basic character set of this standard, shown in Table B.1 - *Basic Character Set*, includes those selected from the uppercase letters, digits, space, and special characters as specified below.

Table B.1 - *Basic Character Set*

|       |       |   |   |   |   |   |   |             |   |
|-------|-------|---|---|---|---|---|---|-------------|---|
| A...Z | 0...9 | ! | " | & | ' | ( | ) | +           | * |
| ,     | -     | . | / | : | ; | ? | = | " " (space) |   |

### B.1.1.2.3 Extended Character Set

An extended character set may be used by negotiation between the two parties and includes the lowercase letters and other special characters as specified in Table B.2 - *Extended Character Set*.

Table B.2 - *Extended Character Set*

|       |   |   |   |   |   |   |    |   |
|-------|---|---|---|---|---|---|----|---|
| a...z | % | ~ | @ | [ | ] | _ | {  | } |
| \     |   | < | > | ^ | ` | # | \$ |   |

Note that the extended characters include several character codes that have multiple graphical representations for a specific bit pattern. The complete list appears in other standards such as CCITT S.5. Use of the USA graphics for these codes presents no problem unless data is exchanged with an international partner. Other problems, such as the translation of item descriptions from English to French, arise when exchanging data with an international partner, but minimizing the use of codes with multiple graphics eliminates one of the more obvious problems.

For implementations compliant with this guide, either the entire extended character set must be acceptable, or the entire extended character set must not be used. In the absence of a specific trading partner agreement to the contrary, trading partners will assume that the extended character set is acceptable. Use of the extended character set allows the use of the "@" character in email addresses within the PER segment. Users should note that characters in the extended character set, as well as the basic character set, may be used as delimiters only when they do not occur in the data as stated in Section B.1.1.2.4.1 - *Base Control Set*.

#### B.1.1.2.4 Control Characters

Two control character groups are specified; they have restricted usage. The common notation for these groups is also provided, together with the character coding in three common alphabets. In Table B.3 - *Base Control Set*, the column IA5 represents CCITT V.3 International Alphabet 5.

##### B.1.1.2.4.1 Base Control Set

The base control set includes those characters that will not have a disruptive effect on most communication protocols. These are represented by:

Table B.3 - *Base Control Set*

| NOTATION | NAME             | EBCDIC | ASCII | IA5 |
|----------|------------------|--------|-------|-----|
| BEL      | bell             | 2F     | 07    | 07  |
| HT       | horizontal tab   | 05     | 09    | 09  |
| LF       | line feed        | 25     | 0A    | 0A  |
| VT       | vertical tab     | 0B     | 0B    | 0B  |
| FF       | form feed        | 0C     | 0C    | 0C  |
| CR       | carriage return  | 0D     | 0D    | 0D  |
| FS       | file separator   | 1C     | 1C    | 1C  |
| GS       | group separator  | 1D     | 1D    | 1D  |
| RS       | record separator | 1E     | 1E    | 1E  |
| US       | unit separator   | 1F     | 1F    | 1F  |
| NL       | new line         | 15     |       |     |

The Group Separator (GS) may be an exception in this set because it is used in the 3780 communications protocol to indicate blank space compression.

#### B.1.1.2.4.2 Extended Control Set

The extended control set includes those that may have an effect on a transmission system. These are shown in Table B.4 - *Extended Control Set*.

*Table B.4 - Extended Control Set*

| NOTATION | NAME                 | EBCDIC | ASCII | IA5 |
|----------|----------------------|--------|-------|-----|
| SOH      | start of header      | 01     | 01    | 01  |
| STX      | start of text        | 02     | 02    | 02  |
| ETX      | end of text          | 03     | 03    | 03  |
| EOT      | end of transmission  | 37     | 04    | 04  |
| ENQ      | enquiry              | 2D     | 05    | 05  |

| ETB      | end of block         | 26     | 17    | 17  |

#### B.1.1.2.5 Delimiters

A delimiter is a character used to separate two data elements or component elements or to terminate a segment. The delimiters are an integral part of the data.

Delimiters are specified in the interchange header segment, ISA. The ISA segment can be considered in implementations compliant with this guide (see Appendix C, ISA Segment Note 1) to be a 105 byte fixed length record, followed by a segment terminator. The data element separator is byte number 4; the repetition separator is byte number

83; the component element separator is byte number 105; and the segment terminator is the byte that immediately follows the component element separator.

Once specified in the interchange header, the delimiters are not to be used in a data element value elsewhere in the interchange. For consistency, this implementation guide uses the delimiters shown in Table B.5 - *Delimiters*, in all examples of EDI transmissions.

*Table B.5 - Delimiters*

| CHARACTER | NAME     | DELIMITER                   |
|-----------|----------|-----------------------------|
| *         | Asterisk | Data Element Separator      |
| ^         | Carat    | Repetition Separator        |
| :         | Colon    | Component Element Separator |
| ~         | Tilde    | Segment Terminator          |

The delimiters above are for illustration purposes only and are not specific recommendations or requirements. Users of this implementation guide should be aware that an application system may use some valid delimiter characters within the application data. Occurrences of delimiter characters in transmitted data within a data element will result in errors in translation. The existence of asterisks (\*) within transmitted application data is a known issue that can affect translation software.

### B.1.1.3 Business Transaction Structure Definitions and Concepts

The ASC X12 standards define commonly used business transactions (such as a health care claim) in a formal structure called "transaction sets." A transaction set is composed of a transaction set header control segment, one or more data segments, and a transaction set trailer control segment. Each segment is composed of the following:

- A unique segment ID
- One or more logically related data elements each preceded by a data element separator
- A segment terminator

#### B.1.1.3.1 Data Element

The data element is the smallest named unit of information in the ASC X12 standard. Data elements are identified as either simple or component. A data element that occurs as an ordinal member of a composite data structure is identified as a component data element. A data element that occurs in a segment outside the defined boundaries of a composite data structure is identified as a simple data element. The

distinction between simple and component data elements is strictly a matter of context because a data element can be used in either capacity.

Data elements are assigned a unique reference number. Each data element has a name, description, type, minimum length, and maximum length. For ID type data elements, this guide provides the applicable ASC X12 code values and their descriptions or references where the valid code list can be obtained.

A simple data element within a segment may have an attribute indicating that it may occur once or a specific number of times more than once. The number of permitted repeats are defined as an attribute in the individual segment where the repeated data element occurs.

Each data element is assigned a minimum and maximum length. The length of the data element value is the number of character positions used except as noted for numeric, decimal, and binary elements.

The data element types shown in Table B.6 - *Data Element Types*, appear in this implementation guide.

**Table B.6 - Data Element Types**

| SYMBOL | TYPE       |
|--------|------------|
| Nn     | Numeric    |
| R      | Decimal    |
| ID     | Identifier |
| AN     | String     |
| DT     | Date       |
| TM     | Time       |
| B      | Binary     |

The data element minimum and maximum lengths may be restricted in this implementation guide for a compliant implementation. Such restrictions may occur by virtue of the allowed qualifier for the data element or by specific instructions regarding length or format as stated in this implementation guide.

#### **B.1.1.3.1.1 Numeric**

A numeric data element is represented by one or more digits with an optional leading sign representing a value in the normal base of 10. The value of a numeric data element includes an implied decimal point. It is used when the position of the decimal point within the data is permanently fixed and is not to be transmitted with the data.

This set of guides denotes the number of implied decimal positions. The representation for this data element type is "Nn" where N indicates that it is numeric and n indicates the number of decimal positions to the right of the implied decimal point.

If n is 0, it need not appear in the specification; N is equivalent to N0. For negative values, the leading minus sign (-) is used. Absence of a sign indicates a positive value. The plus sign (+) must not be transmitted.

#### **EXAMPLE**

A transmitted value of 1234, when specified as numeric type N2, represents a value of 12.34.

Leading zeros must be suppressed unless necessary to satisfy a minimum length requirement. The length of a numeric type data element does not include the optional sign.

#### **B.1.1.3.1.2 Decimal**

A decimal data element may contain an explicit decimal point and is used for numeric values that have a varying number of decimal positions. This data element type is represented as "R."

The decimal point always appears in the character stream if the decimal point is at any place other than the right end. If the value is an integer (decimal point at the right end) the decimal point must be omitted. For negative values, the leading minus sign (-) is used. Absence of a sign indicates a positive value. The plus sign (+) must not be transmitted.

Leading zeros must be suppressed unless necessary to satisfy a minimum length requirement. Trailing zeros following the decimal point must be suppressed unless necessary to indicate precision. The use of triad separators (for example, the commas in 1,000,000) is expressly prohibited. The length of a decimal type data element does not include the optional leading sign or decimal point.

#### **EXAMPLE**

A transmitted value of 12.34 represents a decimal value of 12.34.

While the ASC X12 standard supports usage of exponential notation, this guide prohibits that usage.

For implementation of this guide under the rules promulgated under the Health Insurance Portability and Accountability Act (HIPAA), decimal data elements in Data Element 782 (Monetary Amount) will be limited to a maximum length of 10 characters including reported or implied places for cents (implied value of 00 after the decimal point). Note the statement in the preceding paragraph that the decimal point and leading sign, if sent, are not part of the character count.

#### **EXAMPLE**

For implementations mandated under HIPAA rules:

- The following transmitted value represents the largest positive dollar amount that can be sent: 99999999.99
- The following transmitted value is the longest string of characters that can be sent representing whole dollars: 99999999
- The following transmitted value is the longest string of characters that can be sent representing negative dollars and cents: -99999999.99
- The following transmitted value is the longest string of characters that can be sent representing negative whole dollars: -99999999

#### **B.1.1.3.1.3 Identifier**

An identifier data element always contains a value from a predefined list of codes that is maintained by the ASC X12 Committee or some other body recognized by the Committee. Trailing spaces must be suppressed unless they are necessary to satisfy a minimum length. An identifier is always left justified. The representation for this data element type is "ID."

#### **B.1.1.3.1.4 String**

A string data element is a sequence of any characters from the basic or extended character sets. The string data element must contain at least one non-space character. The significant characters shall be left justified. Leading spaces, when they occur, are presumed to be significant characters. Trailing spaces must be suppressed unless they are necessary to satisfy a minimum length. The representation for this data element type is "AN."

#### **B.1.1.3.1.5 Date**

A date data element is used to express the standard date in either YYMMDD or CCYYMMDD format in which CC is the first two digits of the calendar year, YY is the last two digits of the calendar year, MM is the month (01 to 12), and DD is the day in the

month (01 to 31). The representation for this data element type is "DT." Users of this guide should note that all dates within transactions are 8-character dates (millennium compliant) in the format CCYYMMDD. The only date data element that is in format YYMMDD is the Interchange Date data element in the ISA segment and the TA1 segment where the century is easily determined because of the nature of an interchange header.

#### **B.1.1.3.1.6 Time**

A time data element is used to express the ISO standard time HHMMSSd..d format in which HH is the hour for a 24 hour clock (00 to 23), MM is the minute (00 to 59), SS is the second (00 to 59) and d..d is decimal seconds. The representation for this data element type is "TM." The length of the data element determines the format of the transmitted time.

#### **EXAMPLE**

Transmitted data elements of four characters denote HHMM. Transmitted data elements of six characters denote HHMMSS.

#### **B.1.1.3.1.7 Binary**

The binary data element is any sequence of octets ranging in value from binary 00000000 to binary 11111111. This data element type has no defined maximum length. Actual length is specified by the immediately preceding data element. Within the body of a transaction set (from ST to SE) implemented according to this technical report, the binary data element type is only used in the segments Binary Data Segment BIN, and Binary Data Structure BDS. Within those segments, Data Element 785 Binary Data is a string of octets which can assume any binary pattern from hexadecimal 00 to FF, and can be used to send text as well as coded data, including data from another application in its native format. The binary data type is also used in some control and security structures.

Not all transaction sets use the Binary Data Segment BIN or Binary Data Structure BDS.

#### **B.1.1.3.2 Repeating Data Elements**

Simple or composite data elements within a segment can be designated as repeating data elements. Repeating data elements are adjacent data elements that occur up to a number of times specified in the standard as number of repeats. The implementation guide may also specify the number of repeats of a repeating data element in a specific location in the transaction that are permitted in a compliant implementation. Adjacent occurrences of the same repeating simple data element or composite data structure in a segment shall be separated by a repetition separator.

### **B.1.1.3.3 Composite Data Structure**

The composite data structure is an intermediate unit of information in a segment. Composite data structures are composed of one or more logically related simple data elements, each, except the last, followed by a sub-element separator. The final data element is followed by the next data element separator or the segment terminator. Each simple data element within a composite is called a component.

Each composite data structure has a unique four-character identifier, a name, and a purpose. The identifier serves as a label for the composite. A composite data structure can be further defined through the use of syntax notes, semantic notes, and comments. Each component within the composite is further characterized by a reference designator and a condition designator. The reference designators and the condition designators are described in Section B.1.1.3.8 - *Reference Designator* and Section B.1.1.3.9 - *Condition Designator*.

A composite data structure within a segment may have an attribute indicating that it may occur once or a specific number of times more than once. The number of permitted repeats are defined as an attribute in the individual segment where the repeated composite data structure occurs.

### **B.1.1.3.4 Data Segment**

The data segment is an intermediate unit of information in a transaction set. In the data stream, a data segment consists of a segment identifier, one or more composite data structures or simple data elements each preceded by a data element separator and succeeded by a segment terminator.

Each data segment has a unique two- or three-character identifier, a name, and a purpose. The identifier serves as a label for the data segment. A segment can be further defined through the use of syntax notes, semantic notes, and comments. Each simple data element or composite data structure within the segment is further characterized by a reference designator and a condition designator.

### **B.1.1.3.5 Syntax Notes**

Syntax notes describe relational conditions among two or more data segment units within the same segment, or among two or more component data elements within the same composite data structure. For a complete description of the relational conditions, See Section B.1.1.3.9 - *Condition Designator*.

### **B.1.1.3.6 Semantic Notes**

Simple data elements or composite data structures may be referenced by a semantic note within a particular segment. A semantic note provides important additional information regarding the intended meaning of a designated data element, particularly a generic type, in the context of its use within a specific data segment. Semantic notes may also define a relational condition among data elements in a segment based on the presence of a specific value (or one of a set of values) in one of the data elements.

### **B.1.1.3.7 Comments**

A segment comment provides additional information regarding the intended use of the segment.

### **B.1.1.3.8 Reference Designator**

Each simple data element or composite data structure in a segment is provided a structured code that indicates the segment in which it is used and the sequential position within the segment. The code is composed of the segment identifier followed by a two-digit number that defines the position of the simple data element or composite data structure in that segment.

For purposes of creating reference designators, the composite data structure is viewed as the hierarchical equal of the simple data element. Each component data element in a composite data structure is identified by a suffix appended to the reference designator for the composite data structure of which it is a member. This suffix is prefixed with a hyphen and defines the position of the component data element in the composite data structure.

#### **EXAMPLE**

- The first simple element of the CLP segment would be identified as CLP01.
- The first position in the SVC segment is occupied by a composite data structure that contains seven component data elements, the reference designator for the second component data element would be SVC01-02.

### **B.1.1.3.9 Condition Designator**

This section provides information about X12 standard conditions designators. It is provided so that users will have information about the general standard. Implementation guides may impose other conditions designators. See implementation guide section 2.1 Presentation Examples for detailed information about the implementation guide Industry Usage requirements for compliant implementation.

Data element conditions are of three types: mandatory, optional, and relational. They define the circumstances under which a data element may be required to be present or not present in a particular segment.

*Table B.7 - Condition Designator*

| DESIGNATOR    | DESCRIPTION                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                      |
|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------|
| M- Mandatory  | The designation of mandatory is absolute in the sense that there is no dependency on other data elements. This designation may apply to either simple data elements or composite data structures. If the designation applies to a composite data structure, then at least one value of a component data element in that composite data structure shall be included in the data segment.                                           |                                                                                                                      |
| O- Optional   | The designation of optional means that there is no requirement for a simple data element or composite data structure to be present in the segment. The presence of a value for a simple data element or the presence of value for any of the component data elements of a composite data structure is at the option of the sender.                                                                                                |                                                                                                                      |
| X- Relational | Relational conditions may exist among two or more simple data elements within the same data segment based on the presence or absence of one of those data elements (presence means a data element must not be empty). Relational conditions are specified by a condition code (see table below) and the reference designators of the affected data elements. A data element may be subject to more than one relational condition. |                                                                                                                      |
|               | The definitions for each of the condition codes used within syntax notes are detailed below:                                                                                                                                                                                                                                                                                                                                      |                                                                                                                      |
|               | CONDITION CODE                                                                                                                                                                                                                                                                                                                                                                                                                    | DEFINITION                                                                                                           |
|               | P- Paired or Multiple                                                                                                                                                                                                                                                                                                                                                                                                             | If any element specified in the relational condition is present, then all of the elements specified must be present. |

The order of the elements in the condition does not have to be the same as the order of the data elements in the data segment. |

#### B.1.1.3.10 Absence of Data

Any simple data element that is indicated as mandatory must not be empty if the segment is used. At least one component data element of a composite data structure that is indicated as mandatory must not be empty if the segment is used. Optional simple data elements and/or composite data structures and their preceding data element separators that are not needed must be omitted if they occur at the end of a segment. If they do not occur at the end of the segment, the simple data element values and/or composite data structure values may be omitted. Their absence is indicated by the occurrence of their preceding data element separators, in order to maintain the element's or structure's position as defined in the data segment.

Likewise, when additional information is not necessary within a composite, the composite may be terminated by providing the appropriate data element separator or segment terminator.

If a segment has no data in any data element within the segment (an "empty" segment), that segment must not be sent.

### **B.1.1.3.11 Control Segments**

A control segment has the same structure as a data segment, but it is used for transferring control information rather than application information.

#### **B.1.1.3.11.1 Loop Control Segments**

Loop control segments are used only to delineate bounded loops. Delineation of the loop shall consist of the loop header (LS segment) and the loop trailer (LE segment). The loop header defines the start of a structure that must contain one or more iterations of a loop of data segments and provides the loop identifier for this loop. The loop trailer defines the end of the structure. The LS segment appears only before the first occurrence of the loop, and the LE segment appears only after the last occurrence of the loop. Unbounded looping structures do not use loop control segments.

#### **B.1.1.3.11.2 Transaction Set Control Segments**

The transaction set is delineated by the transaction set header (ST segment) and the transaction set trailer (SE segment). The transaction set header identifies the start and identifier of the transaction set. The transaction set trailer identifies the end of the transaction set and provides a count of the data segments, which includes the ST and SE segments.

#### **B.1.1.3.11.3 Functional Group Control Segments**

The functional group is delineated by the functional group header (GS segment) and the functional group trailer (GE segment). The functional group header starts and identifies one or more related transaction sets and provides a control number and application identification information. The functional group trailer defines the end of the functional group of related transaction sets and provides a count of contained transaction sets.

#### **B.1.1.3.11.4 Relations among Control Segments**

The control segment of this standard must have a nested relationship as is shown and annotated in this subsection. The letters preceding the control segment name are the segment identifier for that control segment. The indentation of segment identifiers shown below indicates the subordination among control segments.

**GS** Functional Group Header, starts a group of related transaction sets.

**ST** Transaction Set Header, starts a transaction set.

**LS** Loop Header, starts a bounded loop of data segments but is not part of the loop.

**LS** Loop Header, starts an inner, nested, bounded loop.

**LE** Loop Trailer, ends an inner, nested bounded loop.

**LE** Loop Trailer, ends a bounded loop of data segments but is not part of the loop.

**SE** Transaction Set Trailer, ends a transaction set.

**GE** Functional Group Trailer, ends a group of related transaction sets.

More than one ST/SE pair, each representing a transaction set, may be used within one functional group. Also more than one LS/LE pair, each representing a bounded loop, may be used within one transaction set.

### **B.1.1.3.12 Transaction Set**

The transaction set is the smallest meaningful set of information exchanged between trading partners. The transaction set consists of a transaction set header segment, one or more data segments in a specified order, and a transaction set trailer segment. See Figure B.1 - *Transmission Control Schematic*.

#### **B.1.1.3.12.1 Transaction Set Header and Trailer**

A transaction set identifier uniquely identifies a transaction set. This identifier is the first data element of the Transaction Set Header Segment (ST). A user assigned transaction set control number in the header must match the control number in the Trailer Segment (SE) for any given transaction set. The value for the number of included segments in the SE segment is the total number of segments in the transaction set, including the ST and SE segments.

#### **B.1.1.3.12.2 Data Segment Groups**

The data segments in a transaction set may be repeated as individual data segments or as unbounded or bounded loops.

#### **B.1.1.3.12.3 Repeated Occurrences of Single Data Segments**

When a single data segment is allowed to be repeated, it may have a specified maximum number of occurrences defined at each specified position within a given transaction set standard. Alternatively, a segment may be allowed to repeat an unlimited number of times. The notation for an unlimited number of repetitions is ">1."

#### **B.1.1.3.12.4 Loops of Data Segments**

Loops are groups of semantically related segments. Data segment loops may be unbounded or bounded.

#### **Unbounded Loops**

To establish the iteration of a loop, the first data segment in the loop must appear once and only once in each iteration. Loops may have a specified maximum number of

repetitions. Alternatively, the loop may be specified as having an unlimited number of iterations. The notation for an unlimited number of repetitions is ">1."

A specified sequence of segments is in the loop. Loops themselves are optional or mandatory. The requirement designator of the beginning segment of a loop indicates whether at least one occurrence of the loop is required. Each appearance of the beginning segment defines an occurrence of the loop.

The requirement designator of any segment within the loop after the beginning segment applies to that segment for each occurrence of the loop. If there is a mandatory requirement designator for any data segment within the loop after the beginning segment, that data segment is mandatory for each occurrence of the loop. If the loop is optional, the mandatory segment only occurs if the loop occurs.

### **Bounded Loops**

The characteristics of unbounded loops described previously also apply to bounded loops. In addition, bounded loops require a Loop Start Segment (LS) to appear before the first occurrence and a Loop End Segment (LE) to appear after the last consecutive occurrence of the loop. If the loop does not occur, the LS and LE segments are suppressed.

#### **B.1.1.3.12.5 Data Segments in a Transaction Set**

When data segments are combined to form a transaction set, three characteristics are applied to each data segment: a requirement designator, a position in the transaction set, and a maximum occurrence.

#### **B.1.1.3.12.6 Data Segment Requirement Designators**

A data segment, or loop, has one of the following requirement designators for health care and insurance transaction sets, indicating its appearance in the data stream of a transmission. These requirement designators are represented by a single character code.

*Table B.8 - Data Segment Requirement Designators*

| DESIGNATOR   | DESCRIPTION                                                                                                                                                                                                                        |
|--------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| M- Mandatory | This data segment must be included in the transaction set. (Note that a data segment may be mandatory in a loop of data segments, but the loop itself is optional if the beginning segment of the loop is designated as optional.) |
| O- Optional  | The presence of this data segment is the option of the sending party.                                                                                                                                                              |

**B.1.1.3.12.7 Data Segment Position**

The ordinal positions of the segments in a transaction set are explicitly specified for that transaction. Subject to the flexibility provided by the optional requirement designators of the segments, this positioning must be maintained.

**B.1.1.3.12.8 Data Segment Occurrence**

A data segment may have a maximum occurrence of one, a finite number greater than one, or an unlimited number indicated by ">1."

**B.1.1.3.13 Functional Group**

A functional group is a group of similar transaction sets that is bounded by a functional group header segment and a functional group trailer segment. The functional identifier defines the group of transactions that may be included within the functional group. The value for the functional group control number in the header and trailer control segments must be identical for any given group. The value for the number of included transaction sets is the total number of transaction sets in the group. See Figure B.1 - *Transmission Control Schematic*.

**B.1.1.4 Envelopes and Control Structures****B.1.1.4.1 Interchange Control Structures**

Typically, the term "interchange" connotes the ISA/IEA envelope that is transmitted between trading/business partners. Interchange control is achieved through several "control" components. The interchange control number is contained in data element ISA13 of the ISA segment. The identical control number must also occur in data element 02 of the IEA segment. Most commercial translation software products will verify that these two elements are identical. In most translation software products, if these elements are different the interchange will be "suspended" in error.

There are many other features of the ISA segment that are used for control measures. For instance, the ISA segment contains data elements such as authorization information, security information, sender identification, and receiver identification that can be used for control purposes. These data elements are agreed upon by the trading partners prior to transmission. The interchange date and time data elements as well as the interchange control number within the ISA segment are used for debugging purposes when there is a problem with the transmission or the interchange.

Data Element ISA12, Interchange Control Version Number, indicates the version of the ISA/IEA envelope. GS08 indicates the version of the transaction sets contained within the ISA/IEA envelope. The versions are not required to be the same. An Interchange

Acknowledgment can be requested through data element ISA14. The interchange acknowledgment is the TA1 segment. Data element ISA15, Test Indicator, is used between trading partners to indicate that the transmission is in a "test" or "production" mode. Data element ISA16, Subelement Separator, is used by the translator for interpretation of composite data elements.

The ending component of the interchange or ISA/IEA envelope is the IEA segment. Data element IEA01 indicates the number of functional groups that are included within the interchange. In most commercial translation software products, an aggregate count of functional groups is kept while interpreting the interchange. This count is then verified with data element IEA01. If there is a discrepancy, in most commercial products, the interchange is suspended. The other data element in the IEA segment is IEA02 which is referenced above.

See Appendix C, EDI Control Directory, for a complete detailing of the interchange control header and trailer. The authors recommend that when two transactions with different X12 versions numbers are sent in one interchange control structure (multiple functional groups within one ISA/IEA envelope), the Interchange Control version used should be that of the most recent transaction version included in the envelope. For the transmission of HIPAA transactions with mixed versions, this would be a compliant enveloping structure.

#### **B.1.1.4.2 Functional Groups**

Control structures within the functional group envelope include the functional identifier code in GS01. The Functional Identifier Code is used by the commercial translation software during interpretation of the interchange to determine the different transaction sets that may be included within the functional group. If an inappropriate transaction set is contained within the functional group, most commercial translation software will suspend the functional group within the interchange. The Application Sender's Code in GS02 can be used to identify the sending unit of the transmission. The Application Receiver's Code in GS03 can be used to identify the receiving unit of the transmission. The functional group contains a creation date (GS04) and creation time (GS05) for the functional group. The Group Control Number is contained in GS06. These data elements (GS04, GS05, and GS06) can be used for debugging purposes. GS08, Version/Release/Industry Identifier Code is the version/release/sub-release of the transaction sets being transmitted in this functional group.

The Functional Group Control Number in GS06 must be identical to data element 02 of the GE segment. Data element GE01 indicates the number of transaction sets within the functional group. In most commercial translation software products, an aggregate

count of the transaction sets is kept while interpreting the functional group. This count is then verified with data element GE01.

See Appendix C, EDI Control Directory, for a complete detailing of the functional group header and trailer.

### B.1.1.4.3 HL Structures

The HL segment is used in several X12 transaction sets to identify levels of detail information using a hierarchical structure, such as relating dependents to a subscriber. Hierarchical levels may differ from guide to guide.

For example, each provider can bill for one or more subscribers, each subscriber can have one or more dependents and the subscriber and the dependents can make one or more claims.

Each guide states what levels are available, the level's usage, number of repeats, and whether that level has subordinate levels within a transaction set.

For implementations compliant with this guide, the repeats of the loops identified by the HL structure shall appear in the hierarchical order specified in BHT01, when those particular hierarchical levels exist. That is, an HL parent loop must be followed by the subordinate child loops, if any, prior to commencing a new HL parent loop at the same hierarchical level.

The following diagram, from transaction set 837, illustrates a typical hierarchy.

The two examples below illustrate this requirement:

#### Example 1 based on Implementation Guide 811X201:

INSURER

First STATE in transaction (child of INSURER)

First POLICY in transaction (child of first STATE)

First VEHICLE in transaction (child of first POLICY)

Second POLICY in transaction (child of first STATE)

Second VEHICLE in transaction (child of second POLICY)

Third VEHICLE in transaction (child of second POLICY)

Second STATE in transaction (child of INSURER)  
Third POLICY in transaction (child of second STATE)  
Fourth VEHICLE in transaction (child of third POLICY)

**Example 2 based on Implementation Guide 837X141**

First PROVIDER in transaction  
First SUBSCRIBER in transaction (child of first PROVIDER)  
Second PROVIDER in transaction  
Second SUBSCRIBER in transaction (child of second PROVIDER)  
First DEPENDENT in transaction (child of second SUBSCRIBER)  
Second DEPENDENT in transaction (child of second SUBSCRIBER)  
Third SUBSCRIBER in transaction (child of second PROVIDER)  
Third PROVIDER in transaction  
Fourth SUBSCRIBER in transaction (child of third PROVIDER)  
Fifth SUBSCRIBER in transaction (child of third PROVIDER)  
Third DEPENDENT in transaction (child of fifth SUBSCRIBER)

## **B.1.1.5 Acknowledgments**

### **B.1.1.5.1 Interchange Acknowledgment, TA1**

The TA1 segment provides the capability for the interchange receiver to notify the sender that a valid envelope was received or that problems were encountered with the interchange control structure. The TA1 verifies the envelopes only. Transaction set-specific verification is accomplished through use of the Functional Acknowledgment Transaction Set, 997. See Section B.1.1.5.2 - *Functional Acknowledgment, 997*, for more details. The TA1 is unique in that it is a single segment transmitted without the GS/GE envelope structure. A TA1 can be included in an interchange with other functional groups and transactions.

Encompassed in the TA1 are the interchange control number, interchange date and time, interchange acknowledgment code, and the interchange note code. The interchange control number, interchange date and time are identical to those that were present in the transmitted interchange from the trading partner. This provides the capability to associate the TA1 with the transmitted interchange. TA104, Interchange Acknowledgment Code, indicates the status of the interchange control structure. This data element stipulates whether the transmitted interchange was accepted with no errors, accepted with errors, or rejected because of errors. TA105, Interchange Note Code, is a numerical code that indicates the error found while processing the interchange control structure. Values for this data element indicate whether the error occurred at the interchange or functional group envelope.

### B.1.1.5.2 Functional Acknowledgment, 997

The Functional Acknowledgment Transaction Set, 997, has been designed to allow trading partners to establish a comprehensive control function as a part of their business exchange process. This acknowledgment process facilitates control of EDI. There is a one-to-one correspondence between a 997 and a functional group. Segments within the 997 can identify the acceptance or rejection of the functional group, transaction sets or segments. Data elements in error can also be identified. There are many EDI implementations that have incorporated the acknowledgment process in all of their electronic communications. The 997 is used as a functional acknowledgment to a previously transmitted functional group.

The 997 is a transaction set and thus is encapsulated within the interchange control structure (envelopes) for transmission.

## B.2 Object Descriptors

Object Descriptors (OD) provide a method to uniquely identify specific locations within an implementation guide. There is an OD assigned at every level of the X12N implementation:

1. Transaction Set
2. Loop
3. Segment
4. Composite Data Element
5. Component Data Element
6. Simple Data Element

ODs at the first four levels are coded using X12 identifiers separated by underbars:

| Entity                                                                                  | Example         |
|-----------------------------------------------------------------------------------------|-----------------|
| 1. Transaction Set Identifier plus a unique 2 character value                           | 837Q1           |
| 2. Above plus under bar plus Loop Identifier as assigned within an implementation guide | 837Q1_2330C     |
| 3. Above plus under bar plus Segment Identifier                                         | 837Q1_2330C_NM1 |

| Entity                                                                      | Example               |
|-----------------------------------------------------------------------------|-----------------------|
| 4. Above plus Reference Designator plus under bar plus Composite Identifier | 837Q1_2400_SV101_C003 |

The fifth and sixth levels add a name derived from the "Industry Term" defined in the X12N Data Dictionary. The name is derived by removing the spaces.

| Entity                                                                    | Example                                               |
|---------------------------------------------------------------------------|-------------------------------------------------------|
| 5. Number 4 above plus composite sequence plus under bar plus name        | 837Q1_2400_SV101_C00302_ProcedureCode                 |
| 6. Number 3 above plus Reference Designator plus two under bars plus name | 837Q1_2330C_NM109__OtherPayerPatientPrimaryIdentifier |

Said in another way, ODs contain a coded component specifying a location in an implementation guide, a separator, and a name portion. For example:

Since ODs are unique across all X12N implementation guides, they can be used for a variety of purposes. For example, as a cross reference to older data transmission systems, like the National Standard Format for health care claims, or to form XML tags for newer data transmission systems.

## C.1 Control Segments

- **ISA**  
Interchange Control Header Segment
- **GS**  
Functional Group Header Segment
- **GE**  
Functional Group Trailer Segment
- **IEA**  
Interchange Control Trailer Segment

## SEGMENT DETAIL

## ISA - INTERCHANGE CONTROL HEADER

**X12 Segment Name:** Interchange Control Header

**X12 Purpose:** To start and identify an interchange of zero or more functional groups and interchange-related control segments

**Usage:** REQUIRED

- TR3 Notes:**
1. All positions within each of the data elements must be filled.
  2. For compliant implementations under this implementation guide, ISA13, the interchange Control Number, must be a positive unsigned number. Therefore, the ISA segment can be considered a fixed record length segment.
  3. The first element separator defines the element separator to be used through the entire interchange.
  4. The ISA segment terminator defines the segment terminator used throughout the entire interchange.
  5. Spaces in the example interchanges are represented by “.” for clarity.

## SEGMENT DETAIL

## GS - FUNCTIONAL GROUP HEADER

**X12 Segment Name:** Functional Group Header

**X12 Purpose:** To indicate the beginning of a functional group and to provide control information

**X12 Comments:** 1. A functional group of related transaction sets, within the scope of X12 standards, consists of a collection of similar transaction sets enclosed by a functional group header and a functional group trailer.

**Usage:** REQUIRED

**TR3 Example:** GS\*XX\*SENDER CODE\*RECEIVER  
CODE\*19991231\*0802\*1\*X\*005010X224A3~

SEGMENT DETAIL

# GE - FUNCTIONAL GROUP TRAILER

**X12 Segment Name:** Functional Group Trailer

**X12 Purpose:** To indicate the end of a functional group and to provide control information

**X12 Comments:** 1. The use of identical data interchange control numbers in the associated functional group header and trailer is designed to maximize functional group integrity. The control number is the same as that used in the corresponding header.

**Usage:** REQUIRED

**TR3 Example:** GE\*1\*1~

# D Change Summary

This Implementation Guide defines X12N implementation 005010X224A2 of the Health Care Claim: Dental. It is based on version/release/subrelease 005010 of the ASC X12 standards. The previous X12N implementation of the Health Care Claim: Dental was 004050X142, based on version/release/subrelease 004050 of the ASC X12 standards.

Implementation of 005010X224A2 contains significant changes and clarifications. It can only be used with other trading partners who have also implemented 005010X224A2. Below is a high-level description of the substantive changes from the previous version.

## D.1 Global Changes

1. All Situational notes throughout this implementation guide have changed to comply with ASC X12N implementation guide standards.
2. The guide contains many revisions to informational notes within the various loops, segments and data elements. The revisions add explanatory text.
3. Billing Provider as well as all 2310x and 2420x provider loops contain instruction on the use of the HIPAA National Provider Identifier (NPI) both prior to, and after, the nationally mandated implementation date for that identifier. In instances where a provider identifier is reported, the National Provider Identifier is reported in **NM109** data element with a **NM108** qualifier of **XX**. Any secondary or proprietary identifiers are reported in the secondary identifier **REF** segments. For a more detailed explanation of NPI usage, see **Section 1.10** National Provider Identifier Usage within the HIPAA 837 Transaction.
4. The **G2** qualifier replaces program-specific codes such as **1A**, Blue Cross; **1B**, Blue Shield; **1C**, Medicare; **1D**, Medicaid; **1H**, Champus; etc. to designate a proprietary identifier in all Secondary Identification provider segments.
5. The following qualifiers have been revised to assign specific values in place of generic values:
  - The Provider Taxonomy Code has replaced the generic value of **ZZ** (Mutually Defined) with the specific value of **PXC** (Health Care Provider Taxonomy Code).
  - The qualifier for the HIPAA Individual Patient Identifier has replaced the generic value of **ZZ** (Mutually Defined) with the specific value of **II** (Standard Unique Health Identifier for each individual in the United States).
6. In order to report payer-specific provider identifiers, prior authorization, referral, and pre-determination numbers for non-destination payers at the service line level, data element **REF04** is used to indicate the payer associated with the identifier in **REF01** and **REF02**.
7. Requirements for address segments (**N3** and **N4**) have changed. The underlying code sets for country codes and sub-country codes, as well as for postal zones (ZIP Codes in the US) have been enhanced for greater international mailing uniformity.

8. References to “Insured” in notes and implementation names have changed to the more descriptive term “Subscriber”. See **Section 1.5** Business Terminology and **Section 1.4.3.2.2.2**, Subscriber / Patient Hierarchical Level (HL) Segment for more information.
9. Changes have been made to support the National Plan Identifier, if mandated for use. This identifier is accommodated in the following loops:
  - Pay-to Plan Name, Loop ID-2010AC
  - Payer Name, Loop ID-2010BB
  - Other Payer Name, Loop ID-2330B
10. All aliases have been removed from the guide.
- 10.1 The guide ID has changed to 005010X224A2 (this guide) in several places in the Front Matter and in Section 3 Examples.

## D.2 Detailed Changes

### Front Matter

ASC X12N implementation guide standards for the content and organization of Front Matter sections have changed for this version. The items listed below are those where significant changes have occurred. This list does not include section numbering changes.

11. The explanation of COB reporting (Section 1.4.1) is enhanced and a cross-walk chart and examples are added to show how destination and non-destination payer related information is reported on primary and secondary claims. The COB section includes several new supplemental explanations:
  - COB claims generated from paper or proprietary remittance advices (Section 1.4.1.3).
  - Medicaid subrogation claims (Section 1.4.1.5).
12. A section is added to specify the balancing requirements for the 837 transaction (Section 1.4.4).
13. A section is added to explain allowed and approved amount reporting and calculations (Section 1.4.5).
14. Business Terminology (Section 1.5) is expanded to include new definitions of Bundling, Claim, Encounter, Inpatient, Outpatient, Pay-to-Plan Claims, and Unbundling. Other definitions were updated.
15. A section is added (Section 1.10) to describe the use of the National Provider Identifier (NPI) with the 837 transaction.
16. A section is added (Section 1.11) to explain the reporting of drug claims with the 837 transaction.
17. A section is added (Section 1.12) to address a number of additional 837 reporting instructions, including:
  - Individuals with one legal name,
  - Rejecting claims based on the inclusion of situational data,
  - Multiple REF segments with the same qualifier,

- Provider Tax ID's,
- Claim and line redundant information,
- Inpatient and outpatient designation, and
- Trading partner acknowledgments.

### Transaction Header

18. The value of the Implementation Reference Number (**ST03**) has changed to 005010X224A2, which represents the guide ID for this implementation guide.
19. The Beginning of Hierarchical Transaction (**BHT**) segment includes examples for a claim and an encounter.

### Loop ID-2000A

20. Beginning with the 5010 version, the Billing Provider must be a health care or service provider (as described in **Section 1.10.1** Providers Who Are Not Eligible for Enumeration).
21. The Pay-to Provider loop has been renamed and is now called the Pay-to Address Name loop (Loop ID-2010AB). Its one and only purpose is to supply an alternate location to send reimbursement.
22. Due to the change in function of the Pay-to Address Name loop, the only permitted value for the Provider Code (PRV01) in the Billing Provider Specialty Information (**PRV**) segment is **BI** (Billing).

The guide no longer supports value **PT** (Pay-To).

23. In order to simplify the claims process for Dental claims, the submitter must send the Provider Taxonomy Code at the most granular level appropriate to the claim. The first such location for the Taxonomy Code is at the Billing Provider level (Loop ID-2000AA). Other possible locations are the claim-level Rendering Provider / Assistant Surgeon and the line item-level Rendering Provider / Assistant Surgeon.
24. The segment notes for the Foreign Currency Information (**CUR**) segment now include the instruction that all amounts reported in the transaction be of the currency named in the **CUR** segment. If there is no **CUR** segment, then all amounts will be in US dollars.
25. The front matter provides instructions and definitions for use of the Billing Provider loop and the Pay-To Address Name segment.

### Loop ID-2010AA

26. The Billing Provider loop contains no payer-specific provider identifiers. When it is necessary to send a payer-specific provider identifier, it must be sent in either the Payer Name loop (Loop ID-2010BB) or the Other Payer Name loop (Loop ID-2330B).
27. The only provider identifiers allowed in the Billing Provider loop are:
  - the NPI
  - the provider's taxpayer id
  - the provider's state license number

- the provider's UPIN

28. The Billing Provider Name segment contains the NPI, which is Situational.
29. The Billing Provider Address must be a street address. Other types of mailing addresses for the Billing Provider (such as a Post Office Box or a Lock Box) must be sent in the Pay-To Address Name loop.
30. The Billing Provider Secondary Identification Number segment has split into two named **REF** segments: the Billing Provider Tax Identification segment and the Billing Provider UPIN/License Information segment.
31. The Billing Provider Tax Identification (**REF**) segment is required and contains the provider's taxpayer identifier to be used for 1099 reporting purposes.
32. The Billing Provider UPIN / License Information segment is situational and can contain the license number, the UPIN or both identifiers. If the provider has an NPI and is required by HIPAA to send the NPI, then this segment is not used.
33. The Claim Submitter Credit/Debit Card Information (**REF**) segment has been deleted.
34. The Billing Provider Contact Name (**PER02**) is Required in the first iteration of the Billing Provider Contact Information segment. If a second iteration of the segment is sent, PER02 is Not Used.

#### Loop ID-2010AB

35. The Pay-To Address Name loop replaces the Pay-To Provider Name loop. Its sole purpose is to supply an alternate location to send reimbursement. There are no names and no identifiers in the Pay-To Address Name loop.
36. The Pay-To Provider Secondary Identification Number (**REF**) segment has been removed.

#### Loop ID-2010AC

37. The usage of the Pay-to Plan Name loop has expanded and is no longer limited to Medicaid subrogation.
38. The qualifier in **NM101** has been changed to no longer use the generic value **ZZ** Mutually Defined) in favor of the more specific value **PE** (Payee).
39. The Pay-to Plan secondary REF segments have been "flattened". There are now two distinct segments, each with a repeat count of one. The segments are the Pay-to Plan Secondary Identification segment and the Pay-to Plan Tax Identification segment.

#### Loop ID-2000B

40. The Subscriber / Patient hierarchy has changed to follow the same principles used in other HIPAA transactions, such as Eligibility Request/Response and Claim Status Inquiry/Response. The basic principles are as follows:
  - If the patient has a unique identifier assigned by the destination payer in Loop ID-2010BB, then the patient is considered to be the subscriber and is sent in the Subscriber loop (Loop ID-2000B) and the Patient Hierarchical Level (Loop ID-2000C) is not used.

- If the patient is different than the subscriber and the patient does not have a unique identifier, then the subscriber information is sent in Loop ID-2000B and the patient information is sent in Loop ID-2000C.

41. There are new values for the Payer Responsibility Sequence Number Code (**SBR01**). The new values support sequencing of up to 11 payers. The new values also include a value of U (Unknown) to be used in certain payer-to-payer COB situations.
42. The Situational Rule for the Subscriber Group Name (**SBR04**) has changed.
43. The Dental Claim now supports the Insurance Type Code (**SBR05**) when the destination payer is Medicare and Medicare is not the primary payer.
44. The list of valid values for the Claim Filing Indicator Code (**SBR09**) has changed.

### Loop ID-2010BA

45. The Subscriber Primary Identifier and its qualifier (**NM108** and **b**) remain Situational (**NM108** and **NM109** were Required in 005010X224). The elements are still required when **NM102** of the Subscriber Name segment has a value of '1' (Person) but are not used when **NM102** has a value of '2' (Non-Person). **NM102** could indicate a Non-Person for Worker's Compensation claims.
46. The Situational Rule for the Subscriber Address segments (**N3** and **N4**) has changed.
- 46.1 The usage for the Subscriber City, State and ZIP Code (**N4**) segment remains Situational. (This **N4** segment had been Required in 005010X224.)
47. The Situational Rule for the Subscriber Demographic Information segment (**DMG**) has changed.
48. The Repeat Count for the Subscriber Secondary Identification (**REF**) segment has decreased to one. The only permitted value for the Subscriber Secondary Identification (**REF**) segment is the subscriber's Social Security Number (qualifier **SY**).

### Loop ID-2010BB

49. By adding an informational note to the Payer Name segment, the usage of this segment and loop now explicitly supports designating a reprinter as the destination payer.
50. The element notes for the qualifier for the Payer Identifier (**NM108/NM109**) now contain specific instructions on when to use the HIPAA National Plan ID (value **XV**) vs. when to use the generic Payer Identifier (value **PI**).
- 50.1 The usage for the Payer City, State and ZIP Code (**N4**) segment remains Situational. (This **N4** segment had been Required in 005010X224.)
51. Loop ID-2010BB (Payer Name) now contains the Billing Provider Secondary Information (**REF**) segment. This new segment contains provider identifiers that were formerly sent in the Billing Provider loop.
52. Loop ID-2010BC (Credit/Debit Card Holder Name) has been deleted.

### Loop ID-2000C

- 53. The Situational Rule for the Patient Hierarchical Level has changed in support of the revised Subscriber / Patient hierarchy. The loop is required only when the patient is not the subscriber and the patient does not have a unique identifier assigned by the destination payer. In this case, the patient can only be identified when associated with the subscriber.
- 54. The Student Status Code (**PAT04**) is now Not Used.

### Loop ID-2010CA

- 55. The Patient Primary Identifier and associated qualifier (**NM108/NM109**) are now Not Used.
- 56. The Patient Secondary Identification (**REF**) segment has been deleted.
- 56.1 A new **REF** segment (Property and Casualty Patient Identifier) was added to the 2010CA (Patient Name) loop. The Property and Casualty Patient Identifier segment has a usage of Situational.

### Loop ID-2300

- 57. The Total Claim Charge Amount (**CLM02**) now explicitly states that it must be the sum of the service line charge amounts (sum of the **SV302**'s.)
- 58. The usage for the Facility Code Qualifier (**CLM05-2**) has changed from Not Used to Required.
- 59. The usage of the Assignment or Plan Participation Code (**CLM07**) has changed from Situational to Required. Value **P** (Patient Refuses to Assign Benefits) has been removed.
- 60. A new value has been added to **CLM08**, the Benefits Assignment Certification Indicator. The new value is **W** (Not Applicable), which means that the patient has refused to assign benefits to the provider. In the previous version, **CLM07 = P** carried this message.
- 61. The usage for the Release of Information Code (**CLM09**) has changed to Required. The list of allowable values has increased from one to two to coincide with Privacy legislation.
- 62. The Situational Rule for the Related Causes Information composite (**CLM11**) has been clarified. Component **CLM11-3** of element **CLM11** has changed to Not Used.
- 63. The Situational Rule for **CLM11-4** (Auto Accident State or Province Code) has changed to be more specific.
- 64. The Admission Date (**DTP01 = 435**) and Discharge Date (**DTP01 = 096**) have been removed.
- 65. The Situational Rule for the Accident Date (**DTP**) segment has been clarified.
- 66. This version has added a new date segment as the Repricer Received Date.
- 66.1 The Code List Qualifier Code (**DN206**) has changed from Not Used to Required. **DN206** must have a value of "**JP**" to indicate the Universal National Tooth Designation System. (See the previous errata document 005010X224A1 for the changed pages from the transaction set listing).

67. The value **OB** (Operative Note) was removed from the list of valid values for the Report Type Code (**PWK01**). Use value **OZ** (Support Data for Claim) instead.
68. The Attachment Transmission Code (**PWK02**) has added new value **FT** (File Transfer) to designate that the attachment is available from an attachment warehouse (vendor).
69. The Situational Rule for both **PWK05** and **PWK06** has changed to support **PWK02 = FT**.
70. The maximum field length for the Attachment Control Number is now 50 characters.
71. The Credit / Debit Card - Maximum Amount (**AMT**) segment has been removed.
72. The Repeat Count for the claim-level Predetermination Identification (**REF**) segment has changed from five to one.
73. The Situational Rule for the Service Authorization Exception Code (**REF**) segment has been clarified.
74. The segment notes for the Payer Claim Control Number (**REF**) segment have been clarified.
75. The Prior Authorization or Referral Number (**REF**) segment is now two distinct segments: the Referral Number segment; and the Prior Authorization segment. The qualifiers did not change.
76. The Repriced Claim Number (**REF**) and the Adjusted Repriced Claim Number (**REF**) segments have been added to the 2300 loop.
77. The Claim Identifier for Transmission Intermediaries is the new name for the Claim Identification Number for Clearinghouses and Other Transmission Intermediaries segment. The qualifier (**REF01 = D9**) did not change.
78. The Situational Rule has been clarified for the File Information (**K3**) segment. Segment notes explain the process for applying for an exception to be allowed to use the segment.
- 78.1 The Situational Rule for the Health Care Diagnosis Code (**HI**) segment has changed. The new rule is as follows:  
“Required when the diagnosis may have an impact on the adjudication of the claim in cases where specific dental procedures may minimize the risks associated with the connection between the patient’s oral and systemic health conditions. If not required by this implementation guide, do not send.”
79. The Health Care Diagnosis Code (**HI**) segment has added an additional qualifier to **HI01-1**, **HI02-1**, **HI03-1** and **HI04-1** to support ICD-10-CM Diagnosis Codes (if allowed under HIPAA).
80. The Situational Rule for the claim-level Claim Pricing / Repricing Information (**HCP**) segment has been clarified. The Situational Rules for the data elements within the segment have also been clarified.
81. The usage of element **HCP06** (Repriced Approved APG Code) has changed from Not Used to Situational.

### Loop ID-2310A

- 82. The Situational Rule for the claim-level Referring Provider loop has been clarified.
- 83. The Referring Provider must be a person. (Loop ID-2310AINM102 must be a '1'.)
- 84. The only identifier allowed in the Referring Provider Name segment (**NM108** and **NM109**) is the National Provider Identifier (NPI). The identifier has a usage of Situational.
- 85. The segment repeat for the Referring Provider Secondary Identifier (**REF**) segment has been reduced to 3.
- 86. The list of valid qualifiers for the Referring Provider Secondary Identifier (Loop ID-2310AIREF01) now contains only **0B** (State License Number), **1G** (Provider UPIN Number) and **G2** (Provider Commercial Number). The specific values such as **1B** (Blue Shield Provider Number), **1D** (Medicaid Provider Number) etc. have been removed. In their place, use **G2**.

### Loop ID-2310B

- 87. The Situational Rule for the claim-level Rendering Provider loop has been clarified.
- 88. The only identifier allowed in the Rendering Provider Name segment (**NM108** and **NM109**) is the National Provider Identifier (NPI). The identifier has a usage of Situational.
- 89. The usage of the Rendering Provider Specialty Information segment has changed from Situational to Required.
- 90. The segment repeat for the Referring Provider Secondary Identifier (**REF**) segment has been reduced to 4.
- 91. The list of valid qualifiers for the Rendering Provider Secondary Identifier (Loop ID-2310AIREF01) now contains only **0B** (State License Number), **1G** (Provider UPIN Number), **G2** (Provider Commercial Number) and **LU** (Location Number). The specific values such as **1B** (Blue Shield Provider Number), **1D** (Medicaid Provider Number) etc. have been removed. In their place, use **G2**.

### Loop ID-2310C

- 92. The segment name for the Service Facility Location is now the Service Facility Location Name.
- 93. The Situational Rule for the claim-level Service Facility Location Name loop has been clarified.
- 94. The Entity Identifier Code (**NM101**) in the Service Facility Location Name segment must be '77'. The qualifier **FA** (Facility) has been deleted.
- 95. The only identifier allowed in the Service Facility Location Name segment (**NM108** and **NM109**) is the National Provider Identifier (NPI). The identifier has a usage of Situational.
- 96. The Entity Identifier Code in the Service Facility Location Name segment must be '77'.

- 97. The usage for the Laboratory or Facility Primary Identifier (**NM108** and **NM109**) has changed from Required to Situational.
- 98. The Repeat Count for the Service Facility Location Secondary Identification segment is now three.
- 99. The list of valid qualifiers for the Service Facility Location Name Secondary Identifier (Loop ID-2310A | REF01) now contains only **0B** (State License Number), **G2** (Provider Commercial Number) and **LU** (Location Number). The specific values such as **1B** (Blue Shield Provider Number), **1D** (Medicaid Provider Number) etc. have been removed. In their place, use **G2**.

### Loop ID-2310D

- 100. The Situational Rule for the claim-level Assistant Surgeon loop has been clarified.
- 101. The only identifier allowed in the Assistant Surgeon Name segment (**NM108** and **NM109**) is the National Provider Identifier (NPI). The identifier has a usage of Situational.
- 102. The Assistant Surgeon Specialty Information (**PRV**) segment has changed from Situational to Required.
- 103. The Repeat Count for the Service Facility Location Secondary Identification segment is now four.
- 104. The list of valid qualifiers for the Assistant Surgeon Secondary Identifier (Loop ID-2310A | REF01) now contains only **0B** (State License Number), **1G** (Provider UPIN Number), **G2** (Provider Commercial Number) and **LU** (Location Number). The specific values such as **1B** (Blue Shield Provider Number), **1D** (Medicaid Provider Number) etc. have been removed. In their place, use **G2**.

### Loop ID-2310E

- 105. The Supervising Provider Name loop has been added.

### Loop ID-2320

- 106. There are new values for the Payer Responsibility Sequence Number Code (**SBR01**). The new values support sequencing of up to 11 payers. The new values also include a value of U (Unknown) to be used in certain payer-to-payer COB situations.
- 107. The Situational Rule for the Subscriber Group Name (**SBR04**) has changed.
- 108. The Dental Claim now supports the Insurance Type Code (**SBR05**) when the destination payer is Medicare and Medicare is not the primary payer.
- 109. The list of valid values for the Claim Filing Indicator Code (**SBR09**) has changed.
- 110. The segment notes and Situational Rule for the Claim Adjustment (**CAS**) segment have been clarified.
- 111. The Situational Rules for the various elements in the **CAS** segment have been clarified.
- 112. The COB Allowed Amount (**AMT**) segment in Loop ID-2320 has been removed.

- 113. The Remaining Patient Liability (**AMT**) segment has been added to Loop ID-2320.
- 114. The COB Total Non-Covered Amount (**AMT**) segment has been added to Loop ID-2320.
- 115. The COB Patient Responsibility Amount (**AMT**) segment in Loop ID-2320 has been removed.
- 116. The COB Discount Amount (**AMT**) segment in Loop ID-2320 has been removed.
- 117. The COB Patient Paid Amount (**AMT**) segment in Loop ID-2320 has been removed.
- 118. The Other Insured Demographic Information (**DMG**) segment has been removed.
- 119. The usage for the Other Insurance Coverage Information (**OI**) has changed from Situational to Required.
- 120. A new value has been added to **OI03** (Benefits Assignment Certification Indicator). The new value is **W** (Not Applicable), which means that the patient has refused to assign benefits to the provider.
- 121. The list of allowable values for the Release of Information Code (**OI06**) has increased from one to two to coincide with Privacy legislation.
- 122. The Situational Rule for the Outpatient Adjudication Information (**MOA**) segment has been clarified.
- 123. The usage for elements **MOA01** (Reimbursement Rate), **MOA02** (HCPCS Payable Amount) and **MOA09** (Non-Payable Professional Component Billed Amount) has changed from Not Used to Situational.

### Loop ID-2330A

- 124. The Segment Notes for the Other Subscriber has been clarified.
- 125. The Other Subscriber Primary Identifier and its qualifier (**NM108** and **NM109**) are now required.
- 125.1 The usage for the Other Subscriber City, State and ZIP Code (**N4**) segment remains Situational. (This **N4** segment had been Required in 005010X224.)
- 126. The Repeat Count for the Subscriber Secondary Identification (**REF**) segment has decreased to one.
- 127. The only permitted value for the Subscriber Secondary Identification (**REF**) segment is the subscriber's Social Security Number (qualifier **SY**).

### Loop ID-2330B

- 128. The element notes for the Other Payer Primary Identifier (Loop ID-2330B | **NM108-NM109**) contain instructions for using the HIPAA National Plan ID, when issued.
- 128.1 The usage for the Other Payer City, State and ZIP Code (**N4**) segment remains Situational. (This **N4** segment had been Required in 005010X224.)
- 129. The Other Payer Contact Information (**PER**) segment has been removed.
- 130. The Claim Paid Date (**DTP**) segment is now the Claim Check or Remittance Date segment.

- 131. Several qualifiers have been removed from the Other Payer Secondary Identifier (**REF**) segment and one new qualifier has been added.
- 132. The Other Payer Prior Authorization or Referral Number (**REF**) segment is now two distinct segments: the Other Payer Referral Number segment; and the Other Payer Prior Authorization segment. The qualifiers did not change.
- 133. The segment and element notes in the Other Payer Claim Adjustment Indicator (**REF**) segment have been clarified.
- 134. The Other Payer Predetermination Identification (**REF**) segment has been added.
- 135. The Other Payer Claim Control Number (**REF**) segment has been added.
- 136. The Other Payer Patient Information loop (formerly Loop ID-2330C) has been removed. If the payer in Loop ID-2330B has assigned a unique identifier to the patient, then the patient must be sent in the Other Subscriber loop.
- 137. The list of valid qualifiers for the Other Payer Referring Provider Secondary Identifier (Loop ID-2330CIREF01) now contains only **0B** (State License Number), **1G** (Provider UPIN Number) and **G2** (Provider Commercial Number). The specific values such as **1B** (Blue Shield Provider Number), **1D** (Medicaid Provider Number) etc. have been removed. In their place, use **G2**.
- 138. The list of valid qualifiers for the Other Payer Rendering Provider Secondary Identifier (Loop ID-2330CIREF01) now contains only **0B** (State License Number), **1G** (Provider UPIN Number), **G2** (Provider Commercial Number) and **LU** (Location Number). The specific values such as **1B** (Blue Shield Provider Number), **1D** (Medicaid Provider Number) etc. have been removed. In their place, use **G2**.

### Loop ID-2330C through Loop ID-2330H

- 139. The Other Payer Patient Information loop (Loop ID-2330C) has been removed. All remaining 2330x loops have been renumbered.
- 140. Loop ID-2330F (Other Payer Billing Provider) has been added.
- 141. Loop ID-2330G (Other Payer Service Facility Location) has been added.
- 142. Loop ID-2330H (Other Payer Assistant Surgeon) has been added.

### Loop ID-2400

- 143. The Line Counter (**LX**) segment has been renamed to be the Service Line Number segment.
- 143.1 The Segment Repeat Count for the Service Line Number (**LX**) segment had been listed as 50. It was changed to be a Segment Repeat Count of one.
- 143.2 The element notes for the Procedure Code Modifiers (**SV301-3**, **SV301-4**, **SV301-5** and **SV301-6**) were changed to remove references to HCPCS modifiers. The only valid procedure code modifiers are those named in Code Source **135** (American Dental Association) and published in the Code on Dental Procedures and Nomenclature. (See the previous errata document 005010X224A1 for the changed pages from the transaction set listing.)
- 144. The Situational Rule for the Procedure Code Description (**SV301-7**) has been clarified.

145. The usage of the Line Item Charge Amount (**SV302**) has been clarified. The amount is inclusive of the provider's base charge and any applicable tax amounts reported in the line's tax amount (**AMT**) segments.
146. The Situational Rule for the Oral Cavity Designation element has been clarified to clearly state that individual teeth must not be reported here.
147. The usage of the Procedure Count (**SV306**) has changed from Required to Situational.
148. The list of valid values for the Tooth Code Qualifier (**TOO01**) has changed by removing value **JO** (International Standard Designation System for Teeth and Areas of the Oral Cavity).
149. The name of the Date - Service (**DTP**) segment has changed to Date - Service Date.
150. The Situational Rule for the Date - Prior Placement segment has been clarified.
151. There is now a choice of qualifiers for the Date - Prior Placement segment.
  - Qualifier **441** (Prior Placement) signifies that the segment contains the exact date of the prior placement.
  - Qualifier **139** (Estimated) signifies that the segment contains an estimated date of the prior placement.
152. The Situational Rule for the Date - Treatment Start (**DTP**) segment has been clarified.
153. The Situational Rule for the Contract Information (**CN1**) segment has been clarified.
154. The Situational Rules for the Contract Information (**CN1**) situational data elements have been clarified.
155. The Service Predetermination Identification (**REF**) segment now allows identification of a specific payer (the destination payer named in Loop ID-2010BB or a specified payer from the Other Payer loop (Loop ID-2330B). If the predetermination number belongs to the destination payer, then composite **REF04** is not used. If the predetermination number belongs to a specific non-destination payer, then **REF04** indicates the specific non-destination payer.
156. The repeat count for the Service Predetermination Identification (**REF**) segment increased from one to five.
157. The (line-item) Prior Authorization or Referral Number (**REF**) segment is now two distinct segments: the Referral Number segment; and the Prior Authorization segment. The qualifiers did not change.
158. The usage notes for the Line Item Control Number (**REF**) segment have been clarified.
159. The line-item Repriced Claim Number (**REF**) segment has been added.
160. The line-item Adjusted Repriced Claim Number (**REF**) segment has been added.
161. The Allowed Amount (**AMT**) segment has been removed.

- 162. The Situational Rule and usage notes for the Sales Tax Amount (**AMT**) segment have been clarified along with a reminder that the Line Item Charge Amount (**SV302**) must include the Sales Tax Amount, when specified.
- 163. The Situational Rule has been clarified for the line-item File Information (**K3**) segment. Segment notes explain the process for applying for an exception to be allowed to use the segment.
- 164. The Line Item Note (**NTE**) segment has been removed.
- 165. The usage for elements **HCP09** and **HCP10** has changed from Not Used to Situational. **HCP10** is the Repriced Approved Procedure Code; **HCP09** is a qualifier to identify the type of procedure code.

### Loop ID-2420A

- 166. The Situational Rule and usage notes for the Rendering Provider loop have been clarified.
- 167. The usage for the Rendering Provider Identifier and its associated qualifier (**NM108/NM109**) has changed from Required to Situational. The only valid qualifier is **XX**, which signifies the CMS National Provider Identifier (NPI).
- 168. The usage for the Rendering Provider Specialty Information segment changed from Situational to Required.
- 169. The usage notes for the Rendering Provider Secondary Identification (**REF**) segment have been clarified.
- 170. The list of valid qualifiers for the Rendering Provider Secondary Identifier (Loop ID-2420AIREF01) now contains only **0B** (State License Number), **1G** (Provider UPIN Number), **G2** (Provider Commercial Number) and **LU** (Location Number). The specific values such as **1B** (Blue Shield Provider Number), **1D** (Medicaid Provider Number) etc. have been removed. In their place, use **G2**.
- 171. The Rendering Provider Secondary Identifier (**REF**) segment now allows identification of a specific payer (the destination payer named in Loop ID-2010BB or a specified payer from the Other Payer loop (Loop ID-2330B). If the identifier belongs to the destination payer, then composite **REF04** is not used. If the identifier belongs to a specific non-destination payer, then **REF04** indicates the specific non-destination payer.
- 172. The repeat count for the Rendering Provider Secondary Identifier (**REF**) segment increased from five to 20.

### Loop ID-2420B

- 173. The line-item level Other Payer Prior Authorization or Referral Number loop has been removed.
- 174. This loop is now the Assistant Surgeon Name loop. In version 4050, the Assistant Surgeon Name loop was Loop ID-2420C.
- 175. The Situational Rule and usage notes for the Assistant Surgeon Name loop have been clarified.
- 176. The usage for the Assistant Surgeon Name Identifier and its associated qualifier (**NM108/NM109**) has changed from Required to Situational. The only valid qualifier is **XX**, which signifies the NPI.

- 177. The usage for the Assistant Surgeon Name Specialty Information segment changed from Situational to Required.
- 178. The usage notes for the Assistant Surgeon Name Secondary Identification (**REF**) segment have been clarified.
- 179. The list of valid qualifiers for the Assistant Surgeon Name Secondary Identifier (Loop ID-2420B | REF01) now contains only **0B** (State License Number), **1G** (Provider UPIN Number), **G2** (Provider Commercial Number) and **LU** (Location Number). The specific values such as **1B** (Blue Shield Provider Number), **1D** (Medicaid Provider Number) etc. have been removed. In their place, use **G2**.
- 180. The Assistant Surgeon Name Secondary Identifier (**REF**) segment now allows identification of a specific payer (the destination payer named in Loop ID-2010BB or a specified payer from the Other Payer loop (Loop ID-2330B). If the identifier belongs to the destination payer, then composite **REF04** is not used. If the identifier belongs to a specific non-destination payer, then **REF04** indicates the specific non-destination payer.
- 181. The repeat count for the Assistant Surgeon Name Secondary Identifier (**REF**) segment increased from five to 20.

#### Loop ID-2420C

- 182. The line-item level Supervising Provider loop has been added.

#### Loop ID-2420D

- 183. The line-item level Service Facility Location Name loop has been added.

#### Loop ID-2430

- 184. The Situational Rule and the usage notes for the Line Item Adjudication loop have been clarified.
- 185. Crosswalk references to specific elements in the ASC X12 835 Payment / Remittance Advice transaction have been removed.
- 186. Since there is now a specific qualifier available, the generic qualifier **ZZ** for the Product of Service ID Qualifier (**SVD03-1**) has been replaced by the specific qualifier **ER** (Jurisdiction Specific Procedure and Supply Codes), as defined by Code Source 576.
- 186.1 The element notes for the Procedure Code Modifiers (**SVD03-3**, **SVD03-4**, **SVD03-5** and **SVD03-6**) were changed to remove references to HCPCS modifiers. The only valid procedure code modifiers are those named in Code Source 135 (American Dental Association) and published in the Code on Dental Procedures and Nomenclature. (See the previous errata document 005010X224A1 for the changed pages from the transaction set listing.)
- 187. The usage notes for **SVD06** Bundled or Unbundled Line Number have been clarified.
- 188. The segment name for the **CAS** segment changed from Service Adjustment to the more descriptive Line Adjustment.
- 189. The segment name for the **DTP** segment changed from Line Adjudication Date to the more descriptive Line Check or Remittance Date.
- 190. The Remaining Patient Liability (**AMT**) segment has been added.

### Section 3 Examples

191. All examples were revised to contain the new Guide ID (005010X224A2).

### Appendix B Nomenclature

192. In section B.1.1.2.2., blank spaces in the Basic Character Set were replaced with a quote mark (") and apostrophe (').

193. In section B.1.1.2.3., two additional characters were added: a carat (^) and open single quote mark (').

### Appendix C Control Segments

194. The listed value for element **GS08** was changed to contain the new Guide ID (005010X224A2).

195. The segment example for the Functional Group Header (**GS**) was changed to contain the new Guide ID (005010X224A2).

# E Data Element Glossary

## E.1 Data Element Name Index

This section contains an alphabetic listing of data elements used in this implementation guide. Consult the X12N Data Element Dictionary for a complete list of all X12N Data Elements. Data element names in normal type are generic ASC X12 names. Italic type indicates a health care industry defined name.
