

Interface Capability Brief

EDI 270/271 Eligibility Demo · Stakeholder overview · 2026-08-05

1. Executive summary

Show a clinic front desk verifying member eligibility over real X12 270/271 (005010X279A1): build a 270, call a mock payer, parse the 271, and demonstrate AAA rejection theater then a successful benefits (EB) response.

2. Who this is for

- Clinic Web UI — Front desk; orchestrates build → payer call → parse
- PilotFish eiPlatform — Builds 270 from request XML; parses 271 to clinic JSON
- Mock payer — Accepts raw X12 270; returns canned AAA or success 271

3. What the interface can do

Capabilities below are drawn from the working design and, when present, the published CapabilityStatement — not from aspirational roadmap items.

Integration highlights

Why UI orchestration: Sync REST needs SynchronousResponseTransport; HttpPostTransport is an end-of-route transport. Clinic UI owns the three visible wire steps for demo clarity while still carrying real X12 end-to-end.

4. Honest boundaries (not claimed yet)

- 23R1 trial X12 code tables expired / incomplete for 271 EDI→XML. Outbound XML→EDI 270 works for content but often *omits ST270* without tables; clinic UI inserts ST2700001005010X279A1 before the payer call when missing. Inbound EDI→XML 271 fails with “Could not find matching table data for incoming 271”. Parse target therefore uses a structural Saxon XSLT over <EdiPayload><![CDATA[raw 271]]></EdiPayload> (still real X12 on the wire). With licensed tables, prefer EDITransformationProcessor EDI→XML and drop the ST shim.
- UseInternalData=false on XML→EDI (same pattern as 837 demo).
- SNIP Types 1–3 not run in this slice (follow-on).
- Clinic UI orchestration is intentional demo shape (sync REST + HttpPost mismatch).
- Passwords / URLs are demo-only.

5. What you can verify in a walkthrough

Use these as checklist items when reviewing the demo with business stakeholders. They describe outcomes, not module names.

- Exercise route “1 - Eligibility 270 271 API” from the Web UI or documented smoke path
- Confirm outputs land in the documented folders / queues and appear in the Web UI status views

6. How it works (plain language)

1. Select Jane Doe / FAIL001 → Check eligibility → UI shows *AAA\N\72\C (invalid/missing subscriber) theater. 2. Select John Smith / OK001* → Check eligibility → UI shows active coverage + EB benefit lines.

Routes in this interface

Each route is a configured PilotFish flow. Technical wiring appears in the Route Diagrams PDF; here is the stakeholder reading.

1 - Eligibility 270 271 API: runs steps such as Eligibility REST, Snapshot Inbound Body, Conditional Router, Map Request To 270 EDI XML.

7. Security & trust posture

- X12 SNIP validation is used where configured to reject bad EDI before downstream work
- Credentials and passwords in this package are demo-only — not production secrets

8. Seeing it work

- docker compose up -d --build
- | Clinic Web UI (localhost) | <http://127.0.0.1:8107/> |
- | PilotFish eligibility API | <http://127.0.0.1:8106/eip/rest/eligibility/> |
- | Mock payer health | <http://127.0.0.1:8210/health> |
- | Route diagrams PDF | <http://127.0.0.1:8107/documents/route-diagrams.pdf> |
- curl -s <http://127.0.0.1:8210/health>
- curl -s -X POST <http://127.0.0.1:8107/api/check-eligibility> \

9. Related technical documents

- DESIGN.md — working engineering specification for this interface
- README.md — how to run, ports, and smoke commands
- EDI270_271_V2_Route_Diagrams.pdf — detailed PilotFish route wiring diagrams
- This Capability Brief — shareable stakeholder summary (regenerate after design changes)

This document is generated from the interface sources listed above. If design and runtime diverge, believe the smoke-tested runtime and update DESIGN.md.
